MAX4638/MAX4639 3.5 $\Omega$, Single 8:1 and Dual 4:1, Low-Voltage Analog Multiplexers

## General Description

The MAX4638/MAX4639 are single 8:1 and dual 4:1 CMOS analog multiplexers/demultiplexers (muxes/ demuxes). Each mux operates from a single +1.8 V to +5 V supply or dual $\pm 2.5 \mathrm{~V}$ supplies. These devices feature $3.5 \Omega$ on-resistance (RON) when powered with a single +5 V supply and have -75 dB off-isolation and -85 dB crosstalk from the output to each off channel. The switching times are 18 ns ton and 7 ns toff. They feature a -3 dB 85 MHz bandwidth and a guaranteed $0.25 n A$ leakage current at $+25^{\circ} \mathrm{C}$.
$\mathrm{A}+1.8 \mathrm{~V}$ to +5.5 V operating range makes the MAX4638/ MAX4639 ideal for battery-powered, portable instruments. All channels guarantee break-before-make switching. These parts feature bidirectional operation and can handle Rail-to-Rail ${ }^{\circledR}$ analog signals. All control inputs are TTL/CMOS-logic compatible. Decoding is in standard BCD format, and an enable input is provided to simplify cascading of devices. These devices are available in small 16-pin TQFN, TSSOP, and SO packages, as well as a 20-pin TQFN package.

## Applications

Automatic Test Equipment
Low-Voltage Data-Acquisition Systems
Audio and Video Signal Routing
Medical Equipment
Battery-Powered Equipment
Relay Replacement

Features

- Guaranteed RoN
$3.5 \Omega$ ( +5 V or $\pm 2.5 \mathrm{~V}$ Supplies)
$6 \Omega$ (+3V Supply)
- Guaranteed $0.4 \Omega$ Ron Match Between Channels
- Guaranteed $1 \Omega$ Ron Flatness Over Signal Range
- Guaranteed Low Leakage Currents
$0.25 n A$ at $+25^{\circ} \mathrm{C}$
- Switching Times: tON $=18 \mathrm{~ns}$, tofF $=7 \mathrm{~ns}$
- +1.8V to +5.5V Single-Supply Operation $\pm 2.5 \mathrm{~V}$ Dual-Supply Operation
- Rail-to-Rail Signal Handling
- TTL/CMOS-Logic Compatible
- Crosstalk: -80dB (1MHz)
- Off-Isolation: -60dB (10MHz)

Ordering Information

| PART | TEMP RANGE | PIN-PACKAGE |
| :--- | :--- | :--- |
| MAX4638ETE +T | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 16 TQFN-EP* $(4 \times 4)$ |
| MAX4638EUE +T | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 16 TSSOP |
| MAX4638ESE +T | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 16 SO |
| MAX4638ETP +T | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 20 TQFN-EP* $(4 \times 4)$ |

+Denotes a lead(Pb)-free/RoHS-compliant package.
$T$ = Tape and reel.
*EP = Exposed pad.
Ordering Information continued at end of data sheet.

## MAX4638/MAX4639

## 3.5 $\Omega$, Single 8:1 and Dual 4:1, <br> Low-Voltage Analog Multiplexers

## ABSOLUTE MAXIMUM RATINGS

(Voltages Referenced to GND)

| $V+$ to V - | V |
| :---: | :---: |
| $V+, A_{-}, \mathrm{EN}$ | -0.3V to +6V |
| V- | +0.3V to -6V |
| NO_, COM_ (Note 1) | -0.3V to (V+ + 0.3V) |
| Continuous Current A_, EN | $\pm 30 \mathrm{~mA}$ |
| Continuous Current NO_, COM_ | $\pm 100 \mathrm{~mA}$ |
| Peak Current (NO_, COM_) (pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle) | $\pm 200 \mathrm{~mA}$ |

Continuous Power Dissipation ( $\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}$ )
TQFN (derate $16.9 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ )..................... 1349 mW
TSSOP (derate $9.4 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) ........................ 754.7 mW
SO (derate 8.70mW/ ${ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) ........................... 696 mW
Operating Temperature Range
MAX463_E_E
.$-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
Junction Temperature ...................................................... $+150^{\circ} \mathrm{C}$
Storage Temperature Range ............................. $65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Lead Temperature (soldering, 10s) ................................ $+300^{\circ} \mathrm{C}$
Soldering Temperature (reflow) ...................................... $+260^{\circ} \mathrm{C}$

Note 1: Signals on $\mathrm{COM}_{-}, \mathrm{NO}_{-}$exceeding $\mathrm{V}+$ or V - are clamped by internal diodes. $\mathrm{A}_{-}$and EN are clamped only to V - and can exceed $V+$ up to their maximum ratings. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## MAX4638/MAX4639 <br> 3.5ת, Single 8:1 and Dual 4:1, Low-Voltage Analog Multiplexers

## Detailed Description

The MAX4638/MAX4639 are low-voltage, CMOS analog muxes. The MAX4638 is an 8:1 mux that switches one of eight inputs (NO1-NO8) to a common output (COM) as determined by the 3-bit binary inputs A0, A1, and A2. The MAX4639 is a $4: 1$ dual mux that switches one of four differential inputs to a common differential output as determined by the 2-bit binary inputs A0 and A1. Both the MAX4638/MAX4639 have an EN input that can be used to enable or disable the device. When disabled, all channels are switched off. See Truth Tables.

## Applications Information

## Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence $V+$ on first, then $V$-, followed by the logic inputs. If power-supply sequencing is not possible, add two small-signal diodes (D1, D2) in series with the supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to one diode drop below $\mathrm{V}+$ and one diode drop above V -, but

Figure 1. Overvoltage Protection Using External Blocking Diodes
does not affect the devices' low switch resistance. Device operation is unchanged, and the difference between V+ and V- should not exceed 6V. These protection diodes are not recommended when using a single supply. For single-supply operation, V- should be connected to GND as close to the device as possible.
