## General Description

The MAX4736 is a low on-resistance, low-voltage, dual single-pole/double throw (SPDT) analog switch that operates from a single 1.6 V to 4.2 V supply. This device has fast switching speeds ( $\mathrm{t}_{\mathrm{ON}}=25 \mathrm{~ns}$, $\mathrm{t}_{\mathrm{OFF}}=20 \mathrm{~ns}$ max), handles rail-to-rail analog signals, and consumes less than $4 \mu \mathrm{~W}$ of quiescent power. The MAX4736 has break-before-make switching.
When powered from a 3 V supply, the MAX4736 features low $0.6 \Omega$ on-resistance ( $R_{\mathrm{ON}}$ ), with $0.1 \Omega \mathrm{R}_{\mathrm{ON}}$ matching and $0.05 \Omega \mathrm{R}_{\mathrm{ON}}$ flatness. The digital logic input is 1.8 V CMOS compatible when using a single 3 V supply.
The MAX4736 has one normally open (NO) switch and one normally closed (NC) switch, and is available in 12-pin TQFN ( $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ ), 10-pin $\mu \mathrm{MAX}$, and 10-pin $\mu \mathrm{DFN}(2 \mathrm{~mm} \times 2 \mathrm{~mm})$ packages.

## Applications

- Power Routing
- Battery-Powered Systems
- Audio and Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Communications Circuits
- PCMCIA Cards
- Cellular Phones
- Modems
- Hard Drives

## Benefits and Features

- Low RON
$0.6 \Omega$ (3V Supply)
$1.5 \Omega$ (1.8V Supply)
- $0.1 \Omega$ max RoN Flatness (3V Supply)
- Single-Supply Operation Down to 1.6 V
- Available in TQFN, $\mu$ DFN, and $\mu$ MAX Packages
- 1.8V CMOS Logic Compatible (3V Supply)
- Fast Switching: $\mathrm{t}_{\mathrm{ON}}=25 \mathrm{~ns}$, tofF $=20 \mathrm{~ns}$

## Absolute Maximum Ratings

| Continuous Power Dissipation ( $\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}$ ) |
| :---: |
| $10-\mathrm{Pin} \mu \mathrm{DFN}$ (derate $5.3 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above +70 |
| 10-Pin $\mu$ MAX (derate $5.6 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ).......... 444 mW |
| 12-Pin TQFN (derate $14.7 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) .......... 1176 mW |
| Operating Temperature Range......................... $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Maximum Junction Temperature.................................. $+150^{\circ} \mathrm{C}$ |
| Storage Temperature Range .......................... $65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Lead Temperature (soldering, 10s)............................... $300^{\circ} \mathrm{C}$ |
| Soldering Temperature (reflow).................................. $+260^{\circ} \mathrm{C}$ |

Note 1: Signals on COM_, NO_, or NC_ exceeding V+ or GND are clamped by internal diodes. Limit forward current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value is a maximum, is used in this data sheet.
Note 3: $-40^{\circ} \mathrm{C}$ specifications are guaranteed by design.
Note 4: $R_{O N}$ and $\triangle R_{O N}$ matching specifications for TQFN packaged parts are guaranteed by design.
Note 5: $\Delta \mathrm{R}_{\mathrm{ON}}=\mathrm{R}_{\mathrm{ON}(\mathrm{MAX})}-\mathrm{R}_{\mathrm{ON}(\mathrm{MIN})}$.
Note 6: Flatness is defined as the difference between the maximum and the minimum value of on-resistance as measured over the specified analog signal ranges.
Note 7: Guaranteed by design.
Note 8: Off-Isolation $=20 \log _{10}\left(\mathrm{~V}_{\mathrm{COM}} / \mathrm{V}_{\mathrm{NO}_{-}}\right), \mathrm{V}_{\mathrm{COM}}=$ output, $\mathrm{V}_{\mathrm{NO}_{-}}=$input to OFF switch.
Note 9: Between two switches.
Note 10: Leakage parameters are 100\% tested at hot temperature and guaranteed by correlation at room.
Note 11: Devices are guaranteed to 1 million cycles of operation. (Cycle $=$ switch on $\rightarrow$ switch off $\rightarrow$ switch on)
Note 12: The minimum load resistance is $8 \Omega$.

## $0.6 \Omega$, Low-Voltage, Single-Supply, Dual SPDT Analog Switch

## Detailed Description

The MAX4736 is a low $0.8 \Omega$ max (at $\mathrm{V}+=2.7 \mathrm{~V}$ ) onresistance, low-voltage, dual SPDT analog switch that operates from a 1.6 V to 4.2 V single supply. CMOS switch construction allows switching analog signals that range from GND to $\mathrm{V}+$.
When powered from a 2.7 V supply, the $0.8 \Omega \mathrm{max} \mathrm{R}_{\mathrm{ON}}$ allows high continuous currents to be switched in a variety of applications.

## Applications Information

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings; stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence $\mathrm{V}+$ on first, followed by NO_, NC_, or COM_.
Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the $\mathrm{V}+$ supply to other components. A $0.1 \mu \mathrm{~F}$ capacitor, connected from $\mathrm{V}+$ to GND , is adequate for most applications.

## Logic Inputs

The MAX4736 logic inputs can be driven up to 3.6 V , regardless of the supply voltage. For example, with a 1.8 V supply, IN_ can be driven low to GND and high to 3.6 V . Driving $I N$ _ rail-to-rail minimizes power consumption.

## Analog Signal Levels

Analog signals that range over the entire supply voltage ( $\mathrm{V}+$ to GND) can be passed with very little change in onresistance (see Typical Operating Characteristics). The switches are bidirectional, so the NO_, NC_, and COM_ pins can be used as either inputs or outputs.

## Layout

High-speed switches require proper layout and design procedures for optimum performance. Reduce stray inductance and capacitance by keeping traces short and wide. Ensure that bypass capacitors are as close to the device as possible. Use large ground planes where possible.

## Test Circuits/Timing Diagrams

LOGIC INPUT WAVEFORMS INVERTED FOR SWITCHES THAT HAVE THE OPPOSITE LOGIC SENSE.

Chip Information
TRANSISTOR COUNT: 379
PROCESS: CMOS

Figure 4. Channel Off/On-Capacitance

MEASUREMENTS ARE STANDARDIZED AGAINST SHORTS AT IC TERMINALS.
OFF-ISOLATION IS MEASURED BETWEEN COM_ AND "OFF" NO_ OR NC_ TERMINAL ON EACH SWITCH.
ON-LOSS IS MEASURED BETWEEN COM_ AND "ON" NO_ OR NC_ TERMINAL ON EACH SWITCH.
CROSSTALK IS MEASURED FROM ONE CHANNEL TO ALL OTHER CHANNELS.
SIGNAL DIRECTION THROUGH SWITCH IS REVERSED; WORST VALUES ARE RECORDED.
