## 50,, Low-Voltage, Quad SPST/Dual SPDT Analog Switches in WLP

## General Description

The MAX4747-MAX4750 low-voltage, quad single-pole single-throw (SPST)/dual single-pole/double-throw (SPDT) analog switches operate from a single +2 V to +11 V supply and handle rail-to-rail analog signals. These switches exhibit low leakage current ( 0.1 nA ) and consume less than 0.5 nW (typ) of quiescent power, making them ideal for battery-powered applications.
When powered from a +3 V supply, these switches feature $50 \Omega$ (max) on-resistance (Ron), with $3.5 \Omega$ (max) matching between channels and $9 \Omega$ (max) flatness over the specified signal range.
The MAX4747 has four normally open (NO) switches, the MAX4748 has four normally closed (NC) switches, and the MAX4749 has two NO and two NC switches. The MAX4750 has two SPDT switches. These switches are available in 14-pin TSSOP, 16-pin TQFN ( $4 \mathrm{~mm} \times 4 \mathrm{~mm}$ ), and 16 -bump WLP packages. This tiny chip-scale package occupies a $2 \mathrm{~mm} \times 2 \mathrm{~mm}$ area and significantly reduces the required PC board area.

Applications
Battery-Powered Systems
Audio/Video-Signal Routing
Low-Voltage Data-Acquisition Systems
Cell Phones
Communications Circuits
Glucose Meters
PDAs

Features

- $2 \mathrm{~mm} \times 2 \mathrm{~mm}$ WLP
- Guaranteed On-Resistance (RON)
$25 \Omega$ (max) at +5 V
$50 \Omega$ (max) at +3 V
- On-Resistance Matching
$3 \Omega$ (max) at +5 V
$3.5 \Omega$ (max) at +3V
- Guaranteed < 0.1nA Leakage Current at $T_{A}=+25^{\circ} \mathrm{C}$
- Single-Supply Operation from +2.0V to +11V
- TTL/CMOS-Logic Compatible
- -84 dB Crosstalk (1MHz)
- -72dB Off-Isolation (1MHz)
- Low Power Consumption: 0.5nW (typ)
- Rail-to-Rail Signal Handling

Ordering Information

| PART | TEMP <br> RANGE | PIN-/BUMP- <br> PACKAGE |
| :--- | :--- | :--- |
| MAX4747EUD + | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 14 TSSOP |
| MAX4747ETE + | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 16 Thin QFN-EP* |
| MAX4747EWE +T | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 16 WLP |

${ }^{\star} E P=$ Exposed pad.
+Denotes a lead(Pb)-free/RoHS-compliant package.

## 503, Low-Voltage, Quad SPST/Dual SPDT Analog Switches in WLP

## ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)
V+ $\qquad$
IN_, COM_, NO_, NC_ (Note 1). $-0.3 V$ to +12 V
$\ldots . . . . . . . . . . . .-0.3 \mathrm{~V}$ to ( $\mathrm{V}++0.3 \mathrm{~V}$ )
Continuous Current (any pin) ........................................... $\pm 10 \mathrm{~mA}$
Peak Current (any pin, pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle) ... $\pm 20 \mathrm{~mA}$
Continuous Power Dissipation $\left(\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}\right)$
14-Pin TSSOP (derate $9.1 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) ......... 727 mW
16-Pin Thin QFN (derate $16.9 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) ..... 1349 mW
16-Bump WLP (derate $7.3 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ )......... 589 mW
Note 1: Signals on IN_, NO_, NC_, or COM_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating
Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—Single +3V Supply

$\left(\mathrm{V}+=+3 \mathrm{~V} \pm 10 \%, \mathrm{~V}_{\mathrm{IH}}=+2.0 \mathrm{~V}, \mathrm{~V}_{\mathrm{IL}}=+0.8 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=\mathrm{T}_{\mathrm{MIN}}\right.$ to $\mathrm{T}_{\mathrm{MAX}}$, unless otherwise noted. Typical values are at $\mathrm{V}+=+3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}$. $)$ (Notes 3, 4)

Note 3: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.
Note 4: WLP parts are $100 \%$ tested at $+25^{\circ} \mathrm{C}$ only, and are guaranteed by design over temperature. TSSOP and Thin QFN parts are $100 \%$ tested at $+85^{\circ} \mathrm{C}$ and guaranteed by design over temperature.
Note 5: $\quad \Delta \operatorname{RON}=\operatorname{RON}(M A X)-\operatorname{RON}(\mathrm{MIN})$.
Note 6: WLP and Thin QFN on-resistance matching between channels is guaranteed by design.
Note 7: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.
Note 8: Guaranteed by design.
Note 9: Off-isolation = $20 \log _{10}\left(\mathrm{~V}_{\mathrm{NO}} / \mathrm{VCOM}_{-}\right), \mathrm{V}_{\mathrm{NO}}=$ output, $\mathrm{V}_{\mathrm{COM}}=$ input to off switch
Note 10: Between any two switches.

# 50,, Low-Voltage, Quad SPST/Dual SPDT Analog Switches in WLP 

## Applications Information

## Operating Considerations for High-Voltage Supply

The MAX4747-MAX4750 operate to +11V with some precautions. The absolute maximum rating for $V+$ is +12 V (referenced to GND). When operating near this region, bypass $V+$ with a minimum $0.1 \mu \mathrm{~F}$ capacitor to ground as close to the IC as possible.

## Logic Levels

The MAX4747-MAX4750 are TTL compatible when powered from a single +3 V supply. When powered from other supply voltages, the logic inputs should be driven rail-to-rail. For example, with a +11 V supply, $\operatorname{IN}$ _ should be driven low to 0 V and high to 11 V . With a +3.3 V supply, $\mathrm{IN}_{-}$should be driven low to 0 V and high to 3.3 V . Driving $I N$ _ rail-to-rail minimizes power consumption.

## Analog Signal Levels

Analog signals that range over the entire supply voltage (GND to $\mathrm{V}+$ ) pass with very little change in RoN (see the Typical Operating Characteristics). The bidirectional switches allow NO_, NC_, and COM_ connections to be used as either inputs or outputs.

## Power-Supply Sequencing and Overvoltage Protection

CAUTION: Do not exceed the absolute maximum ratings. Stresses beyond the listed ratings can cause permanent damage to the devices.
Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals, especially if the analog signal is not current limited. If this sequencing is not possible, and if the analog inputs are not current limited to $<20 \mathrm{~mA}$, add small-signal diode D1 as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog signal range to a diode drop (about 0.7 V ) below $\mathrm{V}+$ (for D 1 ), and to a diode drop above ground (for D2). Leakage is unaffected by adding the diodes. On-resistance increases slightly at low supply voltages. Maximum supply voltage ( $\mathrm{V}+$ ) must not exceed +11 V .

Test Circuits/Timing Diagrams

Figure 1. Overvoltage Protection Using External Blocking Diodes Adding protection diodes causes the logic thresholds to be shifted relative to the power-supply rails. The most significant shift occurs when using low supply voltages ( +5 V or less). With a +5 V supply, TTL compatibility is not guaranteed when protection diodes are added. Driving IN_ and IN_ all the way to the supply rails (i.e., to a diode drop higher than the $V+$ pin, or to a diode drop lower than the GND pin) is always acceptable.

Protection diodes D1 and D2 also protect against some overvoltage situations. Using the circuit in Figure 1, no damage results if the supply voltage is below the absolute maximum rating (+12V) and if a fault voltage up to the absolute maximum rating $(\mathrm{V}++0.3 \mathrm{~V})$ is applied to an analog signal terminal.

## WLP Applications Information

For the latest application details on WLP construction, dimensions, tape carrier information, PC board techniques, bump-pad layout, and recommended reflow temperature profile, as well as the latest information on reliability testing results, refer to the Application Note 1891: Wafer-Level Packaging (WLP) and its Applications on Maxim's web site at www.maxim-ic.com/wlp.
