MAXIM

MAX5258 Evaluation Kit

Evaluates: MAX5258/MAX5259

General Description

The MAX5258 evaluation kit (EV kit) provides a proven design to evaluate the MAX5258 low-power, 8-bit octal, digital-to-analog converter (DAC). The EV kit also includes Windows® 2000/XP- and Windows Vista®-compatible software that provides a simple graphical user interface (GUI) for exercising the features of the MAX5258.

The MAX5258 EV kit PCB comes with a MAX5258EEE+ installed. This EV kit can also be used to evaluate the MAX5259EEE+ low-power 8-bit octal DAC (2.7V to 3.6V). Contact the factory for free samples of the MAX5259EEE+.

Features

♦ **Windows 2000/XP- and Windows Vista (32-Bit)-Compatible Software**
♦ **Supports Standard SPI™ Interface**
♦ **USB-PC Connection (Cable Included)**
♦ **USB Powered**
♦ **16-Pin DAC Output Signal Header**
♦ **Proven PCB Layout**
♦ **Lead-Free and RoHS Compliant**
♦ **Fully Assembled and Tested**

MAX5258 EV Kit Files

FILE	DESCRIPTION
INSTALL.EXE	Installs the EV kit files on your computer
MAX5258.EXE	Application program
FTD2XX.INF	USB device driver file
UNINST.INI	Uninstalls the EV kit software
USB_Driver_Help.PDF	USB driver installation help file

Quick Start

Required Equipment
Before beginning, the following equipment is needed:

- MAX5258 EV kit (USB cable included)
- A user-supplied Windows 2000/XP- or Windows Vista-compatible PC with a spare USB port
- Two digital voltmeters (DVMs)
- USB powered. Use optional external power supply for enhanced performance.

Note: In the following sections, software-related items are identified by bolding. Text in **bold** refers to items directly from the EV kit software. Text in **bold and under-lined** refers to items from the Windows operating system.

Procedure
The MAX5258 EV kit is fully assembled and tested. Follow the steps below to verify board operation:

1) Visit **www.maxim-ic.com/evkitsoftware** to down-load the latest version of the EV kit software, 5258Rxx.ZIP. Save the EV kit software to a tempo-rary folder and uncompress the ZIP file.

2) Install the EV kit software on your computer by run-ning the INSTALL.EXE program inside the tempo-rary folder. The program files are copied and icons are created in the Windows **Start | Programs** menu.

3) Verify that all jumpers (JU1–JU7) are in their default positions, as shown in Table 1.

4) Connect the USB cable from the PC to the EV kit board. A **New Hardware Found** window pops up when installing the USB driver for the first time. If you do not see a window that is similar to the one described above after 30 seconds, remove the USB cable from the board and reconnect it. Administrator privileges are required to install the USB device driver on Windows.

5) Follow the directions of the **Add New Hardware Wizard** to install the USB device driver. Choose the **Search for the best driver for your device** option. Specify the location of the device driver to be **C:\Program Files\MAX5258** (default installation directory) using the **Browse** button. During device driver installation, Windows may show a warning message indicating that the device driver Maxim uses does not contain a digital signature. This is not an error condition and it is safe to proceed with installation. Refer to the USB_Driver_Help.PDF doc-ument included with the software for additional information.

MAXIM

6) Start the MAX5258 EV kit software by opening its icon in the **Start I Programs** menu. When the **Part Selection** window appears, click on the **MAX5258** radio button and then press the **Next** button. The EV kit software main window appears, as shown in Figure 1.

7) To measure the OUTA voltage, connect the first DVM between H2-1 (OUTA) and H2-2 (GND).

8) To measure the OUTB voltage, connect the second DVM between H2-3 (OUTB) and H2-4 (GND).

9) Verify that the voltage on both DVMs is approximately 0V.

10) Enter **0x3F** into the **D7 - D0 (Shift Register Data Bits)** edit box.

11) Press the **Load All DACs** button.

12) Verify that the voltage shown on both DVMs is approximately 1V.

__Detailed Description of Software

The main window of the evaluation software (shown in Figure 1) displays the voltages and codes for all DAC input and output registers. In addition, the main window has two tabs. The **Load DACs** tab sheet controls all of the DAC loading features of the MAX5258. The
Figure 1. MAX5258 EV Kit Software Main Window (Load DACs Tab)

MAX5258 Evaluation Kit

Operating Modes tab sheet (shown in Figure 2) controls all of the DAC modes of the MAX5258. The **Load Setting(s)** buttons must be pressed to write the corresponding mode settings to the DAC(s).

Software Reset

Press the **Reset All Registers** button to reset the MAX5258's registers and GUI to the power-on-reset (POR) state. This can be done at any time and is highly recommended after using the **Advanced User Interface** window (Figure 3).

Figure 2. MAX5258 EV Kit Software Main Window (Operating Modes Tab)

MAX5258 Evaluation Kit

Advanced User Interface

A manual serial interface can be established by advanced users by selecting **Options | Interface (Advanced Users)** from the menu bar.

For SPI, click on the **3-wire interface** tab (shown in Figure 3). Enter data into the **Data bytes to be written:** edit box and press the **Send Now** button.

__Detailed Description of Hardware

The MAX5258 EV kit provides a proven layout for the MAX5258. An on-board analog output signal header (H2), an on-board digital input/output signal header (H3), and jumpers to disconnect the on-board micro-controller are all included on the EV kit.
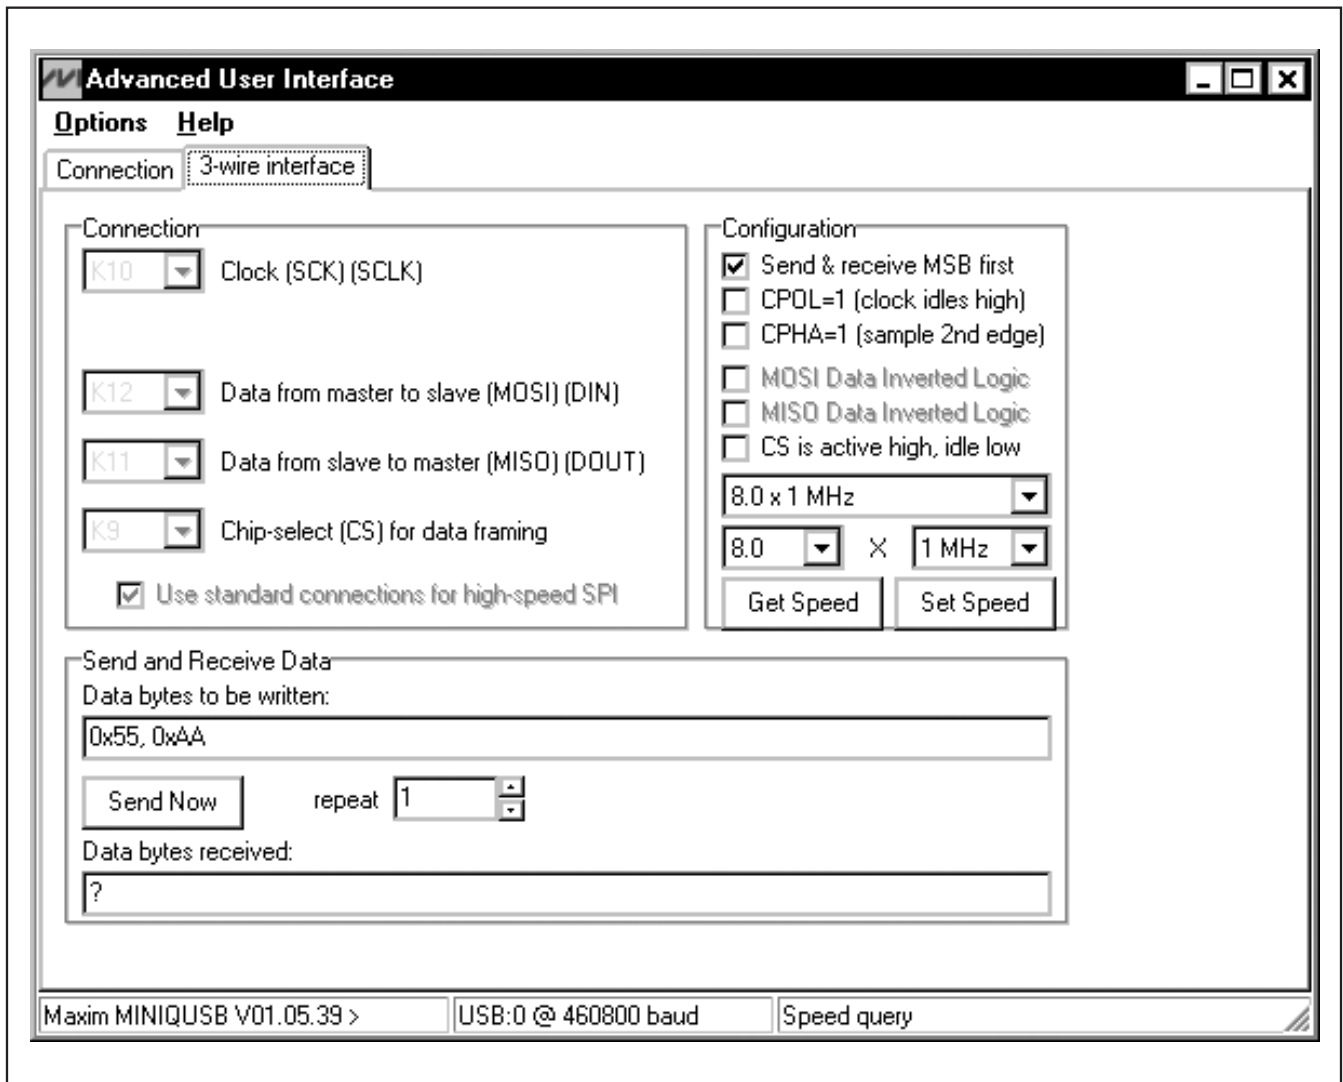

Figure 3. Advanced User Interface Window (3-Wire Interface Tab)

MAX5258 Evaluation Kit

Reference

At power-up, the MAX5258 EV kit defaults to using the on-board 4.096V reference.

To use VDD as the reference, place a shunt on jumper JU7 in the 1-2 position. For off-board external references, connect a user-supplied reference voltage to REF and place a shunt on jumper JU7 in the 1-3 position. Type in the reference voltage value in the **Set Vref** edit box and press the **Set Vref** button. The MAX5258 EV kit software uses the value in the **Set Vref** edit box to calculate the input and output register voltage values. The **Set Vref** edit box value does not affect the register values.

User-Supplied SPI Interface

To use the MAX5258 EV kit with a user-supplied SPI interface, set the shunts as shown in Table 2. Then apply an external 2.7V to 5.5V power supply to VDD. Lastly, connect user-supplied $\overline{CS}$, SCLK, DIN, DOUT, $\overline{LDAC}$, and GND signals to the corresponding pins of header H3.

User-Supplied Power Supplies

Table 1. MAX5258 EV Kit Jumper Descriptions (JU1–JU7)

JUMPER	SHUNT POSITION	DESCRIPTION
JU1	1-2*	MAX5258 $\overline{CS}$ signal connected to on-board microcontroller
	2-3	MAX5258 $\overline{CS}$ signal connected to on-board header H3
JU2	1-2*	MAX5258 SCLK signal connected to on-board microcontroller
	2-3	MAX5258 SCLK signal connected to on-board header H3
JU3	1-2*	MAX5258 DIN signal connected to on-board microcontroller
	2-3	MAX5258 DIN signal connected to on-board header H3
JU4	1-2*	MAX5258 DOUT signal connected to on-board microcontroller
	2-3	MAX5258 DOUT signal connected to on-board header H3
JU5	1-2*	MAX5258 $\overline{LDAC}$ signal connected to on-board microcontroller
	1-3	MAX5258 $\overline{LDAC}$ signal connected to on-board header H3
JU6	1-2	MAX5258 VDD is set to the on-board +3.3V supply post regulated from the USB port
	1-3*	MAX5258 VDD is set to the on-board +5V supply powered directly from the USB port
	1-4	Connect an external 2.7V to 5.5V supply to the VDD pad
JU7	1-2	MAX5258 REF pin is connected directly to VDD
	1-3	Connect an external reference voltage to the REF pad
	1-4*	MAX5258 REF pin is connected to the on-board 4.096V reference

Default position.

Table 2. User-Supplied SPI Interface Settings

JUMPER	SHUNT POSITION
JU1–JU5	2-3
JU6	1-4
JU7	1-2

The MAX5258 EV kit is powered completely from the USB port by default. Place jumper JU6 in the 1-4 position and apply an external 2.7V to 5.5V power supply across the corresponding VDD and GND pads. Lastly, see the *Reference* section to choose the best reference option.
