

MAX5389

Dual, 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometer

General Description

The MAX5389 dual, 256-tap, volatile, low-voltage linear taper digital potentiometer offers three end-to-end resistance values of 10k Ω , 50k Ω , and 100k Ω . Operating from a single +2.6V to +5.5V power supply, the device provides a low 35ppm/ $^{\circ}$ C end-to-end temperature coefficient. The MAX5389 features an up/down interface.

The small package size, low supply operating voltage, low supply current, and automotive temperature range of the MAX5389 make the device uniquely suited for the portable consumer market and battery backup industrial applications.

The MAX5389 is specified over the automotive -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range and is available in a 14-pin TSSOP package.

Applications

- Audio Mixing
- Mechanical Potentiometer Replacement
- Low-Drift Programmable Filters and Amplifiers
- Adjustable Voltage References/Linear Regulators
- Programmable Delays and Time Constants
- Low-Voltage Battery Applications

Features

- Dual, 256-Tap Linear Taper Positions
- Single +2.6V to +5.5V Supply Operation
- Low (< 1 μ A) Quiescent Supply Current
- 10k Ω , 50k Ω , 100k Ω End-to-End Resistance Values
- Up/Down Interface
- Power-On Sets Wiper to Midscale
- -40 $^{\circ}$ C to +125 $^{\circ}$ C Operating Temperature Range

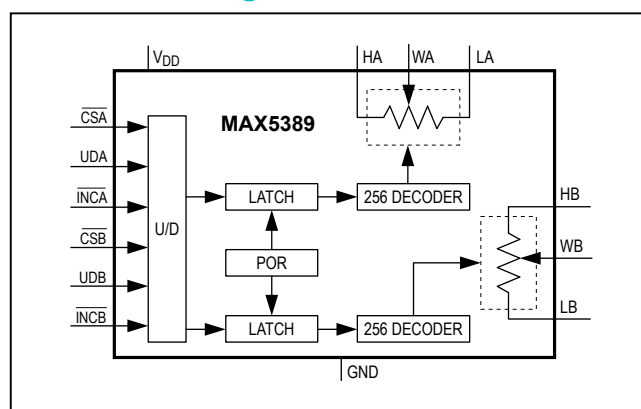

Ordering Information

PART	PIN-PACKAGE	END-TO-END RESISTANCE (k Ω)
MAX5389LAUD+	14 TSSOP	10
MAX5389MAUD+	14 TSSOP	50
MAX5389NAUD+	14 TSSOP	100

Note: All devices are specified over the -40 $^{\circ}$ C to +125 $^{\circ}$ C operating temperature range

+Denotes a lead(Pb)-free/RoHS-compliant package.

Functional Diagram

Absolute Maximum Ratings

V_{DD} to GND-0.3V to +6V
 H₋, W₋, L₋ to GND-0.3V to the lower of
 (V_{DD} + 0.3V) and +6V
 All Other Pins to GND-0.3V to +6V
 Continuous Current into H₋, W₋, and L₋
 MAX5389L..... ±5mA
 MAX5389M..... ±2mA
 MAX5389N ±1mA

Continuous Power Dissipation (T_A = +70°C)
 14-Pin TSSOP (derate 10mW/°C above +70°C).....796.8mW
 Operating Temperature Range..... -40°C to +125°C
 Junction Temperature..... +150°C
 Storage Temperature Range..... -65°C to +150°C
 Lead Temperature (soldering, 10s) +300°C
 Soldering Temperature (reflow) +260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

(V_{DD} = +2.6V to +5.5V, V_{H-} = V_{DD}, V_{L-} = 0V, T_A = -40°C to +125°C, unless otherwise noted. Typical values are at V_{DD} = +5V, T_A = +25°C.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

Input Capacitance				5		pF
TIMING CHARACTERISTICS (Note 7)						
Maximum $\overline{INC_}$ Frequency	f_{MAX}				10	MHz
\overline{CS} to $\overline{INC_}$ Setup Time	t_{CI}		25			ns
\overline{CS} to $\overline{INC_}$ Hold Time	t_{IC}		0			ns
$\overline{INC_}$ Low Period	t_{IL}		25			ns
$\overline{INC_}$ High Period	t_{IH}		25			ns
$UD_$ to $\overline{INC_}$ Setup Time	t_{DI}		50			ns
$UD_$ to $\overline{INC_}$ Hold Time	t_{ID}		0			ns

Note 1: All devices are 100% production tested at $T_A = +25^{\circ}C$. Specifications over temperature limits are guaranteed by design and characterization.

Note 2: DNL and INL are measured with the potentiometer configured as a voltage-divider (Figure 1) with $H_ = V_{DD}$ and $L_ = GND$. The wiper terminal is unloaded and measured with a high-input-impedance voltmeter.

Note 3: R-DNL and R-INL are measured with the potentiometer configured as a variable resistor (Figure 1). DNL and INL are measured with potentiometer configured as a variable resistor. $H_$ is unconnected and $L_ = GND$. For $V_{DD} = +5V$, the wiper terminal is driven with a source current of $400\mu A$ for the $10k\Omega$ configuration, $80\mu A$ for the $50k\Omega$ configuration, and $40\mu A$ for the $100k\Omega$ configuration. For $V_{DD} = +2.6V$, the wiper terminal is driven with a source current of $200\mu A$ for the $10k\Omega$ configuration, $40\mu A$ for the $50k\Omega$ configuration, and $20\mu A$ for the $100k\Omega$ configuration.

Note 4: The wiper resistance is the worst value measured by injecting the currents given in Note 3 into $W_$ with $L_ = GND$. $R_W = (V_W - V_H)/I_W$.

Note 5: Drive HA with a 1kHz, GND to V_{DD} amplitude, tone. LA = LB = GND. No load. WB is at midscale with a 10pF load. Measure WB.

Note 6: The wiper-settling time is the worst case 0 to 50% rise time, measured between tap 0 and tap 127. $H_ = V_{DD}$, $L_ = GND$, and the wiper terminal is loaded with 10pF capacitance to ground.

Note 7: Digital timing is guaranteed by design and characterization, not production tested.

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	$\overline{\text{CSA}}$	Active-Low Register A Chip-Select Input. Drive $\overline{\text{CSA}}$ low to change wiper position WA through $\overline{\text{INCA}}$ and UDA.
2	UDA	Register A Up/Down Control Input. With UDA low, a high-to-low transition at $\overline{\text{INCA}}$ decrements the WA position towards LA. With UDA high, a high-to-low transition at $\overline{\text{INCA}}$ increments WA position toward HA.
3	UDB	Register B Up/Down Control Input. With UDB low, a high-to-low transition at $\overline{\text{INCB}}$ decrements the WB position towards LB. With UDB high, a high-to-low transition at $\overline{\text{INCB}}$ increments WB position toward HB.
4	V_{DD}	Power-Supply Input. Bypass V_{DD} to GND with a 0.1 μ F capacitor close to the device.
5	WA	Resistor A Wiper Terminal
6	HA	Resistor A High Terminal. The voltage at HA can be higher or lower than the voltage at LA. Current can flow into or out of HA.
7	LA	Resistor A Low Terminal. The voltage at LA can be higher or lower than the voltage at HA. Current can flow into or out of LA.
8	LB	Resistor B Low Terminal. The voltage at LB can be higher or lower than the voltage at HB. Current can flow into or out of LB.
9	HB	Resistor B High Terminal. The voltage at HB can be higher or lower than the voltage at LB. Current can flow into or out of HB.
10	WB	Resistor B Wiper Terminal
11	GND	Ground
12	$\overline{\text{INCB}}$	Register B Wiper Increment Control Input. With UDB low, a high-to-low transition at $\overline{\text{INCB}}$ decrements the WB position towards LB. With UDB high, a high-to-low transition at $\overline{\text{INCB}}$ increments WB position toward HB.
13	$\overline{\text{INCA}}$	Register A Wiper Increment Control Input. With UDA low, a high-to-low transition at $\overline{\text{INCA}}$ decrements the WA position towards LA. With UDA high, a high-to-low transition at $\overline{\text{INCA}}$ increments WA position toward HA.
14	$\overline{\text{CSB}}$	Active-Low Register B Chip-Select Input. Drive $\overline{\text{CSB}}$ low to change wiper position WA through $\overline{\text{INCB}}$ and UDB.

Detailed Description

The MAX5389 dual, 256-tap, volatile, low-voltage linear taper digital potentiometer offers three end-to-end resistance values of 10kΩ, 50kΩ, and 100kΩ. The potentiometer consists of 255 fixed resistors in series between terminals H₋ and L₋. The potentiometer wiper, W₋, is programmable to access any one of the 256 tap points on the resistor string. On power-up, the wiper position is set to midscale (tap 128).

The potentiometers are programmable independent of each other. The MAX5389 features an up/down interface.

Up/Down Interface

Logic inputs \overline{CS}_- , UD₋, and \overline{INC}_- determine the wiper position of the device (Table 1). With \overline{CS}_- low and UD₋ high, a high-to-low (falling edge) transition on \overline{INC}_- increments the internal counter which moves the wiper, W₋, closer to H₋. When both \overline{CS}_- and UD₋ are low, the falling edge of \overline{INC}_- decrements the internal counter and moves the tap point, W₋ closer to L₋ (Figure 2). The wiper per-

forms a make-before-break transition ensuring that W₋ is never disconnected from the resistor string during a transition from one tap point to another. When the wiper is at either end of the resistor array additional transitions in the direction of the end point do not change the counter value.

Table 1. Up/Down Control Table

\overline{CS}_-	UD ₋	\overline{INC}_-	W ₋
H	X	X	No change
L	L	↑	No change
L	H	↑	No change
L	L	↓	Decrement
L	H	↓	Increment

X = Don't care.
 ↑ = Low-to-high transition.
 ↓ = High-to-low transition.
