## Single, Dual, Triple, and Quad Standard-Definition Video Filter Amplifiers with AC-Coupled Input Buffers

## General Description

The MAX9586-MAX9589 are small, low-power, multichannel video amplifiers with integrated reconstruction filters and input clamps. Specially suited for standarddefinition video signals, these devices are ideal for a wide range of television and set-top box applications.
The video signals from the outputs of a digital-to-analog converter (DAC) are AC-coupled to the inputs of the MAX9586-MAX9589. External video signals, in which the DC bias is usually not known, can also be AC-coupled to the inputs of the MAX9586-MAX9589. The input sync-tip clamps set the DC level of composite video or luma signals, and the input bias circuits set the DC level of chroma signals.
The reconstruction filter typically has $\pm 1 \mathrm{~dB}$ passband flatness at 8.5 MHz and 55 dB attenuation at 27 MHz . The amplifiers have $2 \mathrm{~V} / \mathrm{V}$ gain and the outputs can be DCcoupled to a $75 \Omega$ load, which is the equivalent of two video loads, or AC-coupled to a $150 \Omega$ load.
The MAX9586-MAX9589 operate from a 2.7 V to 3.6 V single supply and are specified over the $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ automotive temperature range. The MAX9586-MAX9589 are offered in small SOT23 and $\mu \mathrm{MAX}{ }^{\circledR}$ packages.

## Applications

Set-Top Boxes
Televisions
Features

- Single- (MAX9586), Dual- (MAX9587),

Triple- (MAX9588), and Quad- (MAX9589)
Channel Devices

- 8.5MHz, $\pm 1 \mathrm{~dB}$ Passband
- 55dB Attenuation at 27MHz
- Fixed Gain of 2V/V
- Low Power: 4.25mA per Channel
- 2.7V to 3.6V Single-Supply Operation
- Small SOT23 and $\mu$ MAX Packages

## Ordering Information

| PART | PIN-PACKAGE | CHANNELS |
| :--- | :--- | :---: |
| MAX9586AZK +T | 5 Thin SOT23 | 1 |
| MAX9587AZT +T | 6 Thin SOT23 | 2 |
| MAX9588AUA +T | $8 \mu \mathrm{MAX}$ | 3 |
| MAX9589AUB +T | $10 \mu \mathrm{MAX}$ | 4 |

Note: All devices are specified over the $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ operat ing temperature range.
+Denotes a lead(Pb)-free/RoHS-compliant package.
$T=$ Tape and reel.

Pin Configurations and Selector Guide located at end of data sheet.

## ABSOLUTE MAXIMUM RATINGS

| $V_{\text {DD }}$ to GND | +4V |
| :---: | :---: |
| IN_ to GND | -0.3V to +4V |
| $\overline{\text { SHDN }}$ to GND. | -0.3V to +4V |
| OUT_ Short Circuit Duration to VDD, GND | Continuous |
| Continuous Input Current IN, $\overline{\text { SHDN }}$ | $\pm 20 \mathrm{~mA}$ |
| Continuous Power Dissipation ( $\mathrm{T}_{\mathrm{A}}=+70$ 5-Pin Thin SOT23 (derate $9.1 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ a | C) .... 727 mW |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Detailed Description

The MAX9586-MAX9589 filter and amplify the video DAC output in applications such as set-top boxes and televisions. These devices consist of input clamps, input bias circuits, lowpass filters, and gain of $2 \mathrm{~V} / \mathrm{V}$ output amplifiers capable of driving a standard $150 \Omega$ video load to ground.

## Inputs

The input stages of the MAX9586-MAX9589 are either sync-tip clamps or bias circuits. Sync-tip clamps accept AC-coupled CVBS or luma video signals with sync pulses. The sync-tip voltage is internally set to 300 mV . Bias circuit inputs accept AC-coupled chroma, a subcarrier modulated with the color information. The bias voltage of the bias circuits is approximately 500 mV .

## Video Filter

The filter passband $( \pm 1 \mathrm{~dB})$ is typically 8.5 MHz , which makes the device suitable for standard-definition video signals from all sources (e.g., broadcast and DVD). Broadcast video signals are channel limited: NTSC signals have 4.2 MHz bandwidth and PAL signals have 5 MHz bandwidth. Video signals from a DVD player, however, are not channel limited, so the bandwidth of DVD video signals can approach the Nyquist limit of 6.75 MHz . (Recommendation ITU-R BT.601-5 specifies 13.5 MHz as the sampling rate for standard-definition video). Therefore, the maximum bandwidth of the signal is 6.75 MHz . To ease the filtering requirements, most modern video systems oversample by two times, clocking the video current DAC at 27 MHz .

Outputs
The video output amplifiers can both source and sink load current, allowing output loads to be DC- or ACcoupled. The amplifier output stage needs approximately 300 mV of headroom from either supply rail. The devices have an internal level-shift circuit that positions the sync tip at approximately 300 mV at the output.
If the supply voltage is greater than 3.135 V ( $5 \%$ below a 3.3 V supply), each amplifier can drive two DC-coupled video loads to ground. If the supply is less than 3.135 V , each amplifier can drive only one DC-coupled or AC-coupled video load.

Shutdown (MAX9586)
The MAX9586 draws less than $1 \mu \mathrm{~A}$ supply current when SHDN is low. In shutdown mode, the amplifier output becomes high impedance.

## Applications Information

## AC-Coupling the Outputs

The outputs can be AC-coupled since the output stage can source and sink current as shown in Figure 4. Coupling capacitors should be $220 \mu \mathrm{~F}$ or greater to keep the highpass filter, formed by the $150 \Omega$ equivalent resistance of the video transmission line, to a corner frequency of 4.8 Hz or below. The frame rate of PAL systems is 25 Hz , and the frame rate of NTSC systems is 30 Hz . The corner frequency should be well below the frame rate.

## Power-Supply Bypassing and Ground

The MAX9586-MAX9589 operate from a single-supply voltage down to 2.7 V , allowing for low-power operation. Bypass VDD to GND with a $0.1 \mu \mathrm{~F}$ capacitor. Place all external components as close as possible to the device.

## Package Information (continued)

For the latest package outline information and land patterns (footprints), go to www.maxim-ic.com/packages. Note that a " + ", " $\#$ ", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

## Single, Dual, Triple, and Quad Standard-Definition Video Filter Amplifiers with AC-Coupled Input Buffers

For the latest package outline information and land patterns (footprints), go to www.maxim-ic.com/packages. Note that a " + ", "\#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.
nates:

1. ALL dimensions are in millimeters.
2. 'D ' AND "EI' ARE REFERENCE DATUM AND DD NOT INCLUDE MDLD FLASH $\square R$ PROTRUSIONS, AND ARE MEASURED AT THE BITTIM PARTING LINE. MOLD FLASH OR PROTRUSION SHALL NOT EXCEED 0.15 mm ON "D" AND 0.25 mm DN "E" PER SIDE.
3. THE LEEAD WIDTH IIMENSION DIES NIT INCLUDE DAMBAR PRITRUSION. ALLIVVABLE dAmbar pratrusion shall be 0.07 mm TOTAL IN EXCESS IF THE LEAD WIDTH diMENSIIN AT MAXIMUM MATERIAL CDNDITIIN.
4. datum plane rh" located at mad parting line and coincident with lead, Vhere lead exits plastic body at the bottom dr parting line.
5. THE LEAD TIPS MUST LINE WITHIN A SPECIFIED TRLERANCE ZZNE. THIS tolerance zane is defined by Tw parallel lines. ane plane is the SEATING PLANE, DATUM C-C-JI AND THE THER PLANE IS AT THE SPECIFIED DISTANCE FROM L-C-J IN THE DIRECTION INITCATED. FRMED LEEADS SHALL BE PLANAR WITH RESPECT TI ONE ANITHER WITH 0.10mm AT SEATING PLANE.
6. THIS PART IS CZMPLIANT WITH JEDEC SPECIFILATION MD-I93 EXCEPT FIR THE "e" DIMENSION WHICH IS 0.95 mm INSTEAD DF 1.00 mm . THIS PART IS IN FULL COMPLIANCE TO EIAJ SPECIFICATION SC-74.
7. CIPLANARITY APPLIES TO THE EXPISED PAD AS WELL AS THE TERMINALS. COPLANARITY SHALL NDT EXCEED 0.08 mm .
8. Varpage shall nat exceed 0.10 mm .
9. THE TERMINAL \#I IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL信 GPTIONAL. THE TERMINAL \#I IDENTIFIER MAY BE EITHER A MILD DR MARKED GPTIINAL.
10. MARKING IS FIR PACKAGE DRIENTATION REFERENCE anly.
11. all dimensions apply to both leaded (-) and lead free (+) package codes.

NOTES:

1. D\&E DO NOT INCLUDE MOLD FLASH.
2. MOLD FLASH OR PROTRUSIONS NOT TO EXCEED 0.15MM (.006").
3. CONTROLLING DIMENSION: MILLIMETERS.
4. COMPLIES TO JEDEC MO-187, LATEST REVISION, VARIATION AA.
5. MARKING SHOWN IS FOR PKG. ORIENTATION ONLY.
6. ALL DIMENSIONS APPLY TO BOTH LEADED (-) AND PbFREE (+) PKG. CODES.
