MXD8636

SP3T Switch for 0.1～3G Application

General Description

The MXD8636 is a Single Pole, Triple-Throw (SP3T) antenna switch. The low insertion loss achieved by the MXD8636 make it an ideal choice for main/diversity receiving commonly used in LTE-based handsets, data cards, and tablets that use antenna diversity solutions.

Switching is controlled by two CMOS/TTL-compatible control voltage inputs (V1 and V2). Depending on the logic voltage level applied to the control pins, the ANT pin is connected to one of three switched RF outputs (RF1 to RF2) using a low insertion loss path, while the paths between the ANT pin and the other RF pins are in a high isolation state. No external blocking capacitors are required on the RF paths unless VDC is externally applied.

The MXD8636 is manufactured in a compact, 12-pin 2.0 x 2.0 mm, Quad Flat No-Lead (QFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.
