

450W High Reliable Ultra Wide Output Range Intelligent Battery Charger

EHE C € KR TPTC004 IEC62368-1 IEC60335-1/2-29

Features

11 62368-1

- Auto ranging with ultra-wide charging voltage (10.5~21V, 21~42V, 42~80V, 54~100V; Please refer to page 8 for setting)
- · Built-in CANBus protocol for control, setting and monitoring
- Programmable 2/3 stage and charging curve via SBP-001

DEKRA

BS EN/EN62368-1

BS EN/EN60335-1/2-29

- Manual setting for 2/3 stage and 4 built-in charging curves via DIP S.W
- · Multiple protections: Short circuit / Over voltage / Over temperature/ Battery under voltage /Battery reverse polarity (No damage)
- Charger OK and Battery Full signal
- · Temperature compensation function to prolong battery life (Lead-acid only) · Equipments or instruments with back-up battery
- $-30^{\circ}C \sim +70^{\circ}C$ wide operating temperature
- Thermal controlled DC fan for noise reduction
- · Remote ON/OFF control
- · Smart programmer available (Order NO.: <u>SBP-001</u>, sold separately)
- · Carry handle accessory available(Order NO.: DS-Carry handle, sold separately)
- Comply with 62368-1 + 60335-1/-2-29 dual certification
- · Suitable for lead-acid (Pb) and li-ion batteries
- · 3 years warranty

Description

NPB-450 is a miniaturized, versatile, and ultra-wide voltage intelligent charger. It utilizes a fully digital control design with automatic battery voltage detection technology, with five key features including intelligent, versatile, user friendly, safe, and compact. The series have four models with output voltage ranges of 10.5~21V, 21~42V, 42~80V, and 54~100V respectively. The charging voltage range of each model is wide enough to cover a variety of different battery voltages and battery chemistries, and there is a built-in intelligent voltage detection charging mode (Note this mode is set to OFF by factory default and is suitable for lithium batteries with BMS only). The NPB-450 can pair with MEAN WELL's SBP-001 programmer for digital configuration, such as select 2/3 stage charging, adjust charging voltage/current, and set charging cycle time to protect battery lifetime. Through the user-friendly DIP S.W. on front panel, user may also directly adjust the 2/3 stage charging, current (50~100%), and select between the 4 types of preset charging curves. In addition, a CANBus communication protocol is built in to meet professional applications, which allows remote controlling and monitoring for the status of the charger. In terms of safety, it has intelligent detection for proper battery voltage and connection as well as protection from reverse polarity. It passes ITE IEC/EN/UL62368-1 and household appliances EN60335-1/-2-29 dual safety and 3-year warranty to guarantee reliable operation. The NPB-450 is truly an intelligent, safe, and reliable universal charger with outstanding cost performance.

 Modification for charger specification may be required for different battery specification. Please contact battery vendor and MEAN WELL for detail All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. This is the range when programming Vboost or Vfloat by using SBP-001, the smart battery charging programmer. Refer to derating curve. This is MEAN WELL's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation Derating may be needed under low input voltages. Please check the derating curve for more details. The efficiency is measured at 16.8V charge voltage(12V model), 33.6V charge voltage(24V model), 67.2V charge voltage(48V model), 84V charge voltage(72V model). This protection mechanism is specified for the case the short circuit occurs after the charger is turned on. Each model incorporates a MCU-controlled dynamic over voltage protection, which is about 125% of Vboost over Constant Current stage and Coc Voltage stage whereas 125% of Vfloat over Float stage. The charger is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)

2. Programmable charging curve

Charging Curve can be set via SBP-001 with computer

Step 1

Hardware configuration

Step	Action	Note
1	DIP S.W position 2 and 3 need to swith to "OFF" position	
2	The pin7 and pin8(Jumper) of 14pins connector need to removed when using SBP-001	
3	Communication cable of SBP#1 connected between NPB-450 of personal computer	

NPB-450 series

% Function Description:

SBP-001 is a programmer, particularly for MEAN WELL's various programmable battery charger models to program the parameters of charging curves, such as the 2 or 3 stage selectable, <u>Constant current (CC)</u>, <u>tapper current(TC)</u>, <u>Constant voltage (CV)</u>, <u>float voltage (FV)</u>. <u>Charging time out</u> and so on, to accommodate the diversified battery specification in industry. With the design accounting for simplicity and convenience, users can easily configure MEAN WELL's programmable battery chargers with SBP-001 programmer and the computer; all of the setups are able to be finished easily by the means of the specific software. Note:(1) Tapper current(TC) default is 10%, can be fine tuned from 2% to 30% by SBP-001 with computer or CANBus Interface. (2) Please contact MEAN WELL for more details.

X Software Interface:

3. Auto Ranging for Charging (Default non-Auto ranging)

℁ Function Description:

- a. NPB-450 has built-in auto ranging mode. (Note this mode is set to OFF by factory default and is suitable for lithium batteries with BMS only)
- b. When operating in auto ranging mode, NPB-450 will automatically detect the voltage of battery that is connected and adjust charging voltage accordingly. It will not start charging unit appropriate battery voltage is detected.
- c. While under auto ranging mode, NPB-450's built-in MCU will adjust charging voltage. There is no potentiometer for voltage adjustment on the front panel.
- d. While under auto ranging mode, the charging current can be adjusted between 50~100%.
 (The charging current can not be adjusted via potentiometer while not operating in auto ranging mode)

450W High Reliable Ultra Wide Output Range Intelligent Battery Charger

NPB-450 series

⅔ Back to non-auto ranging as following:

Step	Action	Note
B1	All DIP switch for charging curve setting are switch to ON position before applying AC main.	
B2	Applying AC main under remote OFF condition.	
B3	Switch the DIP switch from all ON to all OFF, and then again, back to all ON in 15 seconds.	ov nin dia no di no di dia no di
B4	If LED flashes in GREEN for 3 times, it means the setting is succeeded.	* * *
B5	Remote ON the unit, and it's now back to factory setting.	2 13 13

4.Auto Derating function

% Covered by over temperature protection, auto de-rating function works under operation either in charging curve (2 or 3 stage) or under control by communication protocol(CANBus).

T1(Typ.): Maximum ambient temperature of 100% output current.

T2(Typ.): T1+5℃.

5.CANBus communication interface

CANBus 2.0B version, Can control, setting and monitoring that including output charging voltage, output charging current, internal temperature and DC output ON/OFF.....and so on, please refer to the <u>user manual</u> for more details.

CANBus commend list

Command Code	Command Name	Transaction Type	# of data Bytes	Description
0x0000	OPERATION	R/W	1	ON/OFF control
0x0020	VOUT_SET	R/W	2	Output voltage setting (format: value, F=0.01)
0x0030	IOUT_SET	R/W	2	Output current setting (format: value, F=0.01)
0x0040	FAULT_STATUS	R	2	Abnormal status
0x0050	READ_VIN (NPB-450/750 Does not support)	R	2	Input voltage read value (format: value, F=0.1)
0x0060	READ_VOUT	R	2	Output voltage read value (format: value, F=0.01)
0x0061	READ_IOUT	R	2	Output current read value (format: value, F=0.01)
0x0062	READ_ TEMPERATURE_1	R	2	Internal ambient temperature (format: value, F=0.1)
0x0080	MFR_ID_B0B5	R	6	Manufacturer's name
0x0081	MFR_ID_B6B11	R	6	Manufacturer's name

Command Code	Command Name	Transaction Type	# of data Bytes	Description
0x0082	MFR_MODEL_B0B5	R	6	Manufacturer's model name
0x0083	MFR_MODEL_B6B11	R	6	Manufacturer's model name
0x0084	MFR_REVISION_B0B5	R	6	Firmware revision
0x0085	MFR_LOCATION_B0B2	R/W	3	Manufacturer's factory location
0x0086	MFR_DATE_B0B5	R/W	6	Manufacturer date
0x0087	MFR_SERIAL_B0B5	R/W	6	Product serial number
0x0088	MFR_SERIAL_B6B11	R/W	6	Product serial number
0x00B0	CURVE_CC	R/W	2	Constant current setting of charge curve (format: value, F=0.01)
0x00B1	CURVE_CV	R/W	2	Constant voltage setting of charge curve (format: value, F=0.01)
0x00B2	CURVE_FV	R/W	2	Floating voltage setting of charge curve (format: value, F=0.01)
0x00B3	CURVE_TC	R/W	2	Taper current setting value of charging curve (format: value, F=0.01)
0x00B4	CURVE_CONFIG	R/W	2	Configuration setting of charge curve
0x00B5	CURVE_CC_TIMEOUT	R/W	2	CC charge timeout setting of charging curve
0x00B6	CURVE_CV_TIMEOUT	R/W	2	CV charge timeout setting of charging curve
0x00B7	CURVE_FV_TIMEOUT	R/W	2	FV charge timeout setting of charging curve
0x00B8	CHG_STATUS	R	2	Charging status reporting
0x00C0	SCALING_FACTOR	R	2	Scaling ratio
0x00C1	SYSTEM_STATUS	R	2	System status
0x00C2	SYSTEM_CONFIG	R/W	2	System configuration

6.Charger OK Signal

Charger OK signal is a TTL level signal.

The maximum sourcing current is 10mA.

Between Charger OK (pin 6) and GND-AUX (pin 9 & 10)	Charging Status
"High" : 4.5 ~ 5.5V	Work normally
"Low" : -0.5 ~ 0.5V	Failure or protection function activated

NPB-450 series

7.Battery Full Signal

Battery full signal is a TTL level signal. The maximum sourcing current is 10mA.

Between Battery Full (pin 5) and GND-AUX (pin 9 & 10)	Status	LED indication
"High" : 4.5 ~ 5.5V	Battery Full	Green
"Low" : -0.5 ~ 0.5V	Charging	Orange

8.Remote ON-OFF Control

The NPB-450 can be turned ON/OFF by using the "Remote Control" function.

Between Remote ON-OFF (pin 7) and +12Vaux (pin 8)	Status
S.W Short (pin 7 = 10.8 ~ 13.2V)	ON (Default)
S.W Open (pin 7 = -0.5 ~ 0.5V)	OFF

X The charger is shipped, by factory default, with Remote ON-OFF(pin 7) and +12Vaux (pin 8) shorted by connector.

9.Temperature compensation(3 stage only)

Temperature compensation function to prolong battery life for lead-acid batteries. Temperature compensation range is 0 ~ 40° C .

The battery temperature sensor comes along with the charger can be connected to the unit to allow temperature compensation of the charging voltage. If the sensor is not used, the charger works normally.

10. DC Output Side LED Indicators & Corresponding Signal at Function Pins

LED	Description
e Green	Float (stage 3) or Battery full
Orange	Charging (stage 1 or stage 2)
+ Orange (Flashing)	Auto ranging for charging
🛑 Red	Abnormal status (OTP, OVP, Short circuit, Reverse polarity, Charging timeout.)
	The LED will flash with the red light when the internal temperature reaches 95 $^\circ C$; under this condition, the unit still
Red (Flashing)	operates normally without entering OTP. (In the meantime, an alarm signal will be sent out through the CANBus interface.)

CANL NTC(RTH+)

NTC(RTH-)

450W High Reliable Ultra Wide Output Range Intelligent Battery Charger NPB-450

NPB-450 series

Pin No.	Function	Description
1	A1	CANBus interface address line(A1). Referenced to GND(Signal) Pin4.(Note.1)
2	A0	CANBus interface address line(A0). Referenced to GND(Signal) Pin4.(Note.1)
3	+3.3V	+3.3V voltage output, referance to GND(pin 4).
4	GND(Signal)	CANBus interface address lines GND.
5	Battery Full	Battery Full Signal, referenced to GND-AUX(Pin 9 & 10). The Signal is a TTL level signal. The maximum sourcing current is 10mA and only for output.(Note.2) Low (-0.5 ~ 0.5V) : When the battery is charging. High (4.5 ~ 5.5V) : When the battery is full.
6	Charger OK	Charger OK Signal, referenced to GND-AUX(Pin 9 & 10). The Signal is a TTL level signal. The maximum sourcing current is 10mA and only for output.(Note.2) Low (-0.5 ~ 0.5V) : When the charger fails or the protect function is activating. High (4.5 ~ 5.5V) : When the charger is working properly.
7	Remote ON-OFF	Remote charger ON/OFF Function. The charger can turn the output ON/OFF by dry contact between Remote ON-OFF and +12V-AUX.(Note.2) Short (10.8 ~ 13.2V) : Charger ON ; Open (-0.5 ~ 0.5V) : Charger OFF ; The maximum input voltage is 13.2V.
8	+12Vaux	It is controlled by the Remote ON-OFF control.
9,10	GND-AUX	The signal return is isolated from the output terminal. (+V & -V)
11	CANH	For CANBus model: Data line used in CANBus interface. (Note.2).
12	CANL	For CANBus model: Data line used in CANBus interface. (Note.2).
13	NTC(RTH+)	Temperature sensor(NTC, 5KOhm) comes along with the charger can be connected to the unit to allow temperature
14	NTC(RTH-)	compensation of the charging voltage for lead-acid batteries. Temperature compensation range is 0 ~ 40°C (3 stage only).

Note1: Non-isolated signal, referenced to [GND(signal)].

Note2: Isolated signal, referenced to GND-AUX

Accessory List

X NTC Sensor and Remote Control mating along with NPB-450 (Standard accessory)
