

MAQ5282

120V_{IN}, 50mA, Ultra-Low I_Q, High-PSRR
Linear Regulator

Automotive

General Description

The MAQ5282 high-performance linear regulator offers a very-wide input operating voltage range, up to 120V DC, and supplies an output current of up to 50mA.

Ideal for high input voltage applications such as automotive, industrial and telecom, the MAQ5282 offers $\pm 3\%$ initial accuracy, extremely high-power supply rejection ratio (80dB at 10kHz) and ultra-low quiescent current of 6 μ A. The MAQ5282 is optimized for high-voltage line transients, making it ideal for harsh environment applications.

The MAQ5282 is offered in both fixed output voltage (3.3V/5.0V) and adjustable output voltage (1.27V to 5.5V) options.

The MAQ5282 operates over a -40°C to $+125^{\circ}\text{C}$ temperature range and is available in lead-free, RoHS-compliant, 8-pin ePad MSOP package. This part is also AEC-Q100 qualified for automotive applications.

Data sheet and support documentation are found on the Micrel website: www.micrel.com.

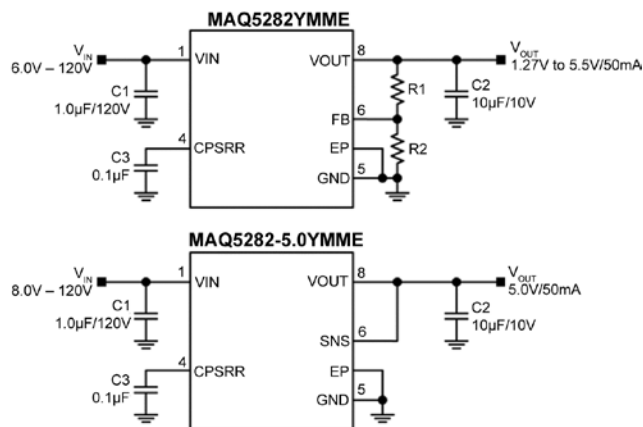

Features

- AEC-Q100 qualified
- Wide input voltage range: 6V to 120V DC
- Ultra-low quiescent current: 6 μ A (typ)
- 50mA guaranteed output current
- Adjustable output from 1.27V to 5.5V
- Withstands up to +120V DC at the input
- Stable with ceramic capacitors
- Ultra-high PSRR (80dB at 10kHz)
- Ultra-high line transient rejection (load dump)
- High output accuracy:
 - $\pm 3\%$ initial accuracy
- Thermal-shutdown and current-limit protection
- Thermally-efficient, 8-pin ePad MSOP package

Applications

- Automotive
- Remote keyless entry power supply
- Telecom applications

Typical Applications

Ordering Information

Part Number	Output Voltage	Top Mark	Temperature Range	Package	Lead Finish
MAQ5282YMME	Adjustable	A8Q2	-40°C to +125°C	8-Pin ePad MSOP	Pb-Free
MAQ5282-3.3YMME	3.3V	8Q2S	-40°C to +125°C	8-Pin ePad MSOP	Pb-Free
MAQ5282-5.0YMME	5.0V	58Q2	-40°C to +125°C	8-Pin ePad MSOP	Pb-Free

Pin Description

Pin		Name	Function
MAQ5282YMME	MAQ5282-x.xYMME		
1	1	VIN	Supply Voltage Input. Connect 1 μ F capacitor from VIN to GND.
2, 3, 7	2, 3, 7	NC	Not internally connected. Connect NC to GND or leave unconnected.
4	4	CPSRR	Bypass Capacitor Connection. Connect 0.1 μ F capacitor from CPSRR to GND.
5	5	GND	Ground.
6	–	FB	Feedback Connection. For external resistor divider to set V _{OUT} .
–	6	SNS	Sense input. Connect SNS to V _{OUT} .
8	8	VOUT	Regulator Output. Connect 10 μ F capacitor from V _{OUT} to GND.
EP	EP	ePad	Exposed Pad (ePad) for Thermal Relief. Connect EP to GND.

Absolute Maximum Ratings⁽¹⁾

V_{IN} to GND.....	-0.3V to +125V
V_{CPSRR} to GND.....	-0.3 to +14V
V_{FB} , V_{SNS} , V_{OUT} to GND	-0.3V to +6V
Power Dissipation (P_D).....	Internally Limited ⁽³⁾
Lead Temperature (soldering, 10s).....	+260°C
Junction Temperature	$-40^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$

FB Voltage		1.232	1.270	1.308	V
		1.206	1.270	1.333	
FB Current	$V_{FB} = 1.27\text{V}$		3.2		nA
Current Limit					
Current Limit	$V_{OUT} = 0\text{V}$	60	125	260	mA
Ripple Rejection					
Power Supply Rejection Ratio	$f = 20\text{kHz}$ to 1MHz		80		dB

Notes:

- Exceeding the absolute maximum rating may damage the device.
- The device is not guaranteed to function outside its operating rating.
- The maximum allowable power dissipation at any T_A (ambient temperature) is $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$. Exceeding the maximum allowable power dissipation results in excessive die temperature, and causes the regulator to enter thermal shutdown.
- Devices are ESD sensitive; use proper handling precautions. Human body model, 1.5k Ω in series with 100pF.
- Specifications are for packaged products only.
- Assure that $V_{IN} \geq (V_{OUT} + 3\text{V})$ and $V_{IN} \geq 6\text{V}$.
- Quiescent current is specified for the adjustable option. The fixed options will add approximately 1 μA due to the internal feedback resistors.
- Line regulation is a percentage of V_{OUT} .

Detailed Description

The MAQ5282 voltage regulator accepts a 6V to 120V input and has an ultra-low 6 μ A typical quiescent current while offering an excellent line transient response and PSRR. These features make it ideal for harsh, noisy environments. All options of the device offer 50mA of output current. The MAQ5282YMME offer an adjustable output voltage from 1.27V to 5.5V. The MAQ5282-3.3YMME offer fixed 3.3V outputs and the MAQ5282-5.0YMME offer fixed 5.0V outputs. The YMME packaged devices feature a heat slug to more effectively remove heat from the die.

Applications Information

Thermal Protection

The MAQ5282 has an internal thermal shutdown circuit to protect it from excessive heating of the die. When the junction temperature exceeds approximately +155°C, the output is disabled and the device begins to cool down. The device turns back on when the junction temperature cools by 15°C. This will result in a cycled output during continuous thermal-overload conditions.

Current Limit

The MAQ5282 features output current-limit protection. The output sustains a continuous short circuit to GND without damage to the device, but thermal shutdown often results.

Input Capacitor

Connect a 1 μ F capacitor from VIN to GND. Micrel recommends the C5750X7R2E105M, 1 μ F, 250V capacitor made by TDK. When using a different capacitor, assure that the voltage rating of the capacitor exceeds any potential transient.

CPSRR Capacitor

Connect a 0.1 μ F capacitor from CPSRR to GND to maintain high power supply rejection. The voltage rating of the capacitor must be at least 14V.

Output Capacitor

Connect a 10 μ F capacitor from VOUT to GND. Assure that the voltage rating of the capacitor exceeds the designed output voltage of the MAQ5282.

Output Voltage Setting

For the MAQ5282YMME, V_{OUT} is programmed from 1.27V to 5.5V using:

$$V_{OUT} = V_{REF} \times \left(\frac{R1}{R2} + 1 \right)$$

where V_{REF} = 1.27V, and R1 and R2 are shown in the Typical Applications circuit.

Thermal Measurements

It is always wise to measure an IC's case temperature to make sure that it is within operating limits, but it is easy to get erroneous results. The standard thermocouple that comes with many voltage meters uses a large wire gauge that behaves like a heat-sink, resulting in artificially low case temperature measurements. Use a thermocouple of 36-gauge wire or smaller, such as the Omega (5SC-TT-K-36-36), to minimize the heat-sinking effect. Also, apply thermal compound to maximize heat transfer between the IC and the thermocouple.

An infrared thermometer is a recommended alternative. The IR thermometer from Optris has a 1mm spot size, ideal for monitoring small surface mount packages. Also, the optional stand makes it easy to keep the beam on the IC for long periods of time.

Micrel, Inc. is a leading global manufacturer of IC solutions for the worldwide high performance linear and power, LAN, and timing & communications markets. The Company's products include advanced mixed-signal, analog & power semiconductors; high-performance communication, clock management, MEMs-based clock oscillators & crystal-less clock generators, Ethernet switches, and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. Additionally, the Company maintains an extensive network of distributors and reps worldwide.

Micrel makes no representations or warranties with respect to the accuracy or completeness of the information furnished in this datasheet. This information is not intended as a warranty and Micrel does not assume responsibility for its use. Micrel reserves the right to change circuitry, specifications and descriptions at any time without notice. No license, whether express, implied, arising by estoppel or otherwise, to any intellectual property rights is granted by this document. Except as provided in Micrel's terms and conditions of sale for such products, Micrel assumes no liability whatsoever, and Micrel disclaims any express or implied warranty relating to the sale and/or use of Micrel products including liability or warranties relating to fitness for a particular purpose, merchantability, or infringement of any patent, copyright, or other intellectual property right.

Micrel Products are not designed or authorized for use as components in life support appliances, devices or systems where malfunction of a product can reasonably be expected to result in personal injury. Life support devices or systems are devices or systems that (a) are intended for surgical implant into the body or (b) support or sustain life, and whose failure to perform can be reasonably expected to result in a significant injury to the user. A Purchaser's use or sale of Micrel Products for use in life support appliances, devices or systems is a Purchaser's own risk and Purchaser agrees to fully indemnify Micrel for any damages resulting from such use or sale.
