

# High-Performance WQVGA Display Module with maXTouch<sup>®</sup> Information Sheet

The High-Performance WQVGA Display Module with maXTouch (AC320005-4) is designed for evaluating the Microchip graphics display solution and graphics library for 32-bit microcontrollers. This board is compatible with Multimedia Expansion Board II (DM320005-2), as well as with Xplained Pro and Xplained Ultra. This board has a TFT 480 x 272 display with 24-bit parallel RGB interface with maXTouch capacitive touch interface.

## Features

- 480 x 272 TFT display
- maXTouch MXT336
- QTouch<sup>®</sup> QT1070 (with four navigation keys)
- 4 K-bit 1-wire EEPROM
- Integrated Projective Capacitive Touch (PCAP) panel

## Running the High-Performance WQVGA Display Module with maXTouch Demonstration Code

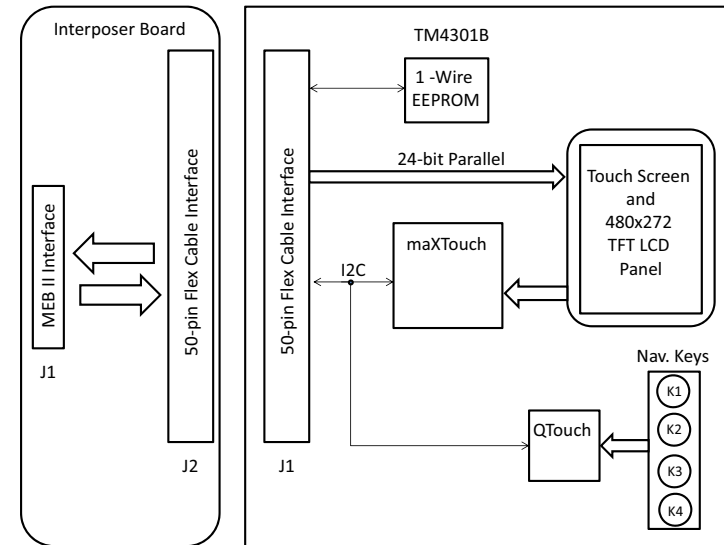

For free Microchip demonstration code and additional information, please visit the MPLAB<sup>®</sup> Harmony web page at: [www.microchip.com/Harmony](http://www.microchip.com/Harmony).

After MPLAB Harmony is installed, refer to the following MPLAB Harmony installation folder for the demonstration purpose:

C:\microchip\harmony\

To work with older Xplained Pro and Xplained Ultra development boards, disconnect the ribbon connector from the adapter board and connect it to the GFX port (50 flex) of the Xplained Pro or Xplained Ultra.

	59	60	

DF12 (3.0)-60DS-05V (86)

ONE\_WIRE is connected to Pin 38 for future use if desired.

Microchip "LCD\_CS" is not used by PDA LCD interface

Microchip "LCD\_Reset" is connected to PDA "DISP". When DISP is low the LCD is in standby mode. When DISP is high the LCD is in normal display mode.

Should we connect Microchip "LCD\_CS" to PDA "DISP"
