AT91SAM9RL-EK Evaluation Board

User Guide

6325C–ATARM–22-Jul-10

Table of Contents

Section 1

Overview

1.1 Scope

The AT91SAM9RL-EK evaluation kit enables the evaluation of and code development for applications running on an AT91SAM9RL device. It significantly reduces design cycle time, increasing confidence in a right-first-time system solution.

This guide focuses on the AT91SAM9RL-EK board as an evaluation platform.

The board supports the AT91SAM9RL in an LFBGA217 package.

1.2 Deliverables

The AT91SAM9RL-EK package contains the following items:

- an AT91SAM9RL-EK board
- universal input AC/DC power supply with US, UK and Europe plug adapter
- one 3V battery backup (CR1225 or equivalent)
- one A/B-type USB cable
- one serial RS232 cable
- one CD-ROM that allows the user to begin evaluating the AT91 ARM® Thumb® 32-bit microcontroller quickly.

1.3 AT91SAM9RL-EK Evaluation Board

- The board is equipped with an AT91SAM9RL64 (217-ball LFBGA package) together with the following:
- 64 Mbytes of SDRAM memory
- 256 Mbytes of NAND Flash memory
- one Atmel serial DataFlash®
- one Atmel TWI serial EEPROM (footprint only)
- one USB High Speed device port interface
- one DBGU serial communication port
- one additional serial communication port with RTS/CTS handshake control
- JTAG/ICE debug interface
- one AC97 Audio Codec
- one 3.5" 1/4 VGA TFT LCD Module with TouchScreen and backlight
- one Power LED and two general-purpose LED

- two user input push buttons
- one Wakeup input push button
- one reset push button
- one MCI SD/MMC card slot
- four expansion connectors (PIOA, PIOB, PIOC, PIOD)
- one BGA-like EBI expansion footprint connector
- one Lithium Coin Cell Battery Retainer for 12 mm cell size

Section 2

Setting Up the AT91SAM9RL-EK Board

2.1 Electrostatic Warning

Upon delivery, the AT91SAM9RL-EK evaluation board is wrapped in a protective anti-static bag. The board must not be exposed to electrostatic discharges. A grounding strap or similar protective device should be worn when handling the board. Avoid touching the component pins or any other on-board metallic element.

2.2 Requirements

In order to set up the AT91SAM9RL-EK evaluation board, the following items are needed:

- The AT91SAM9RL-EK evaluation board itself
- AC/DC power adapter (5V at 2A), 2.1 mm by 5.5 mm

2.3 Layout

Figure 2-1. AT91SAM9RL-EK Layout - Top View

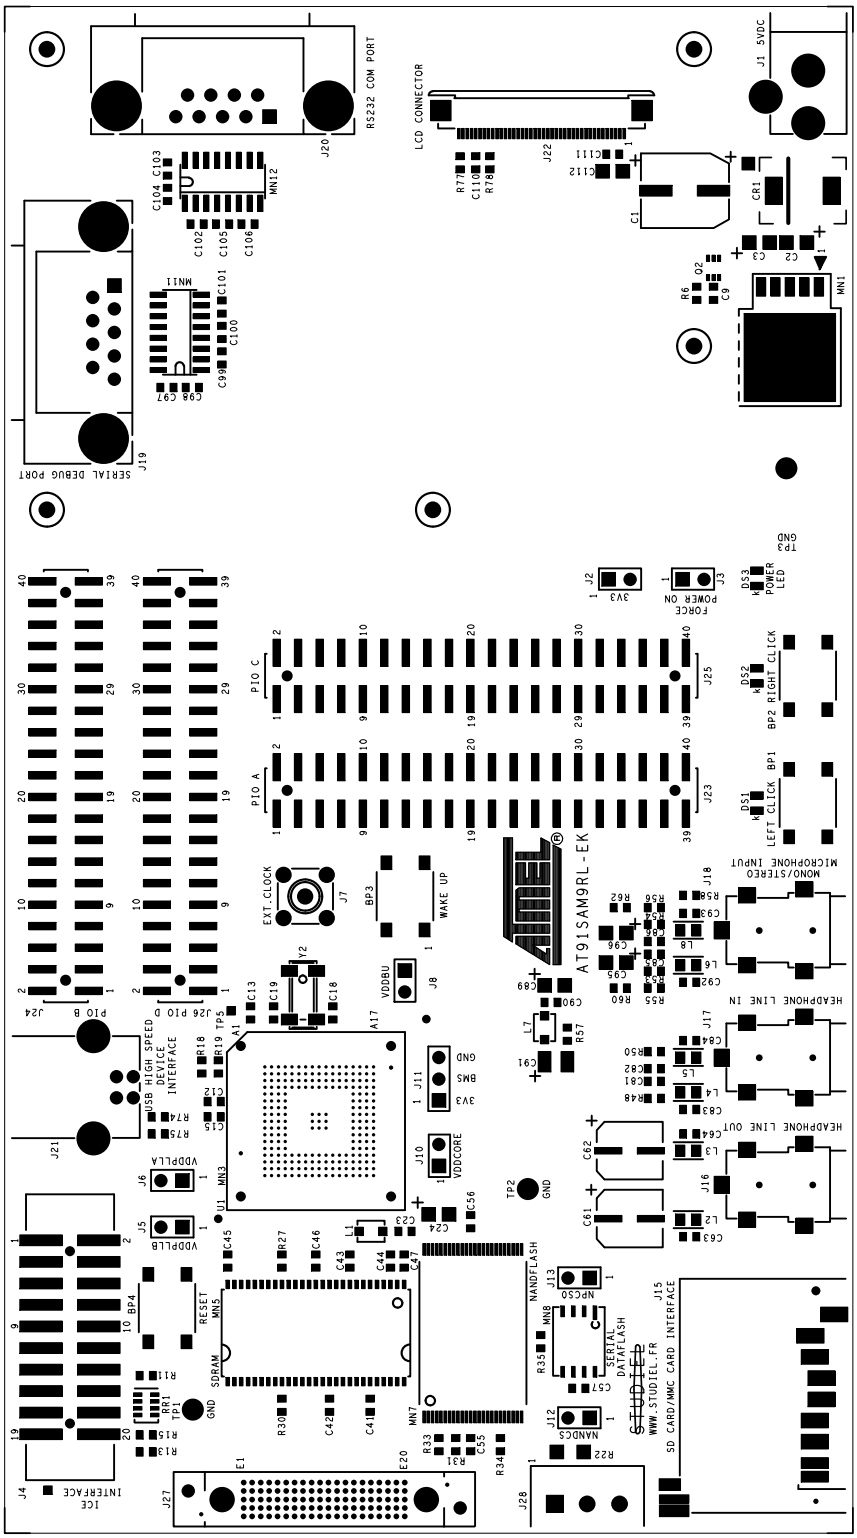

Figure 2-2. AT91SAM9RL-EK Layout - Bottom View

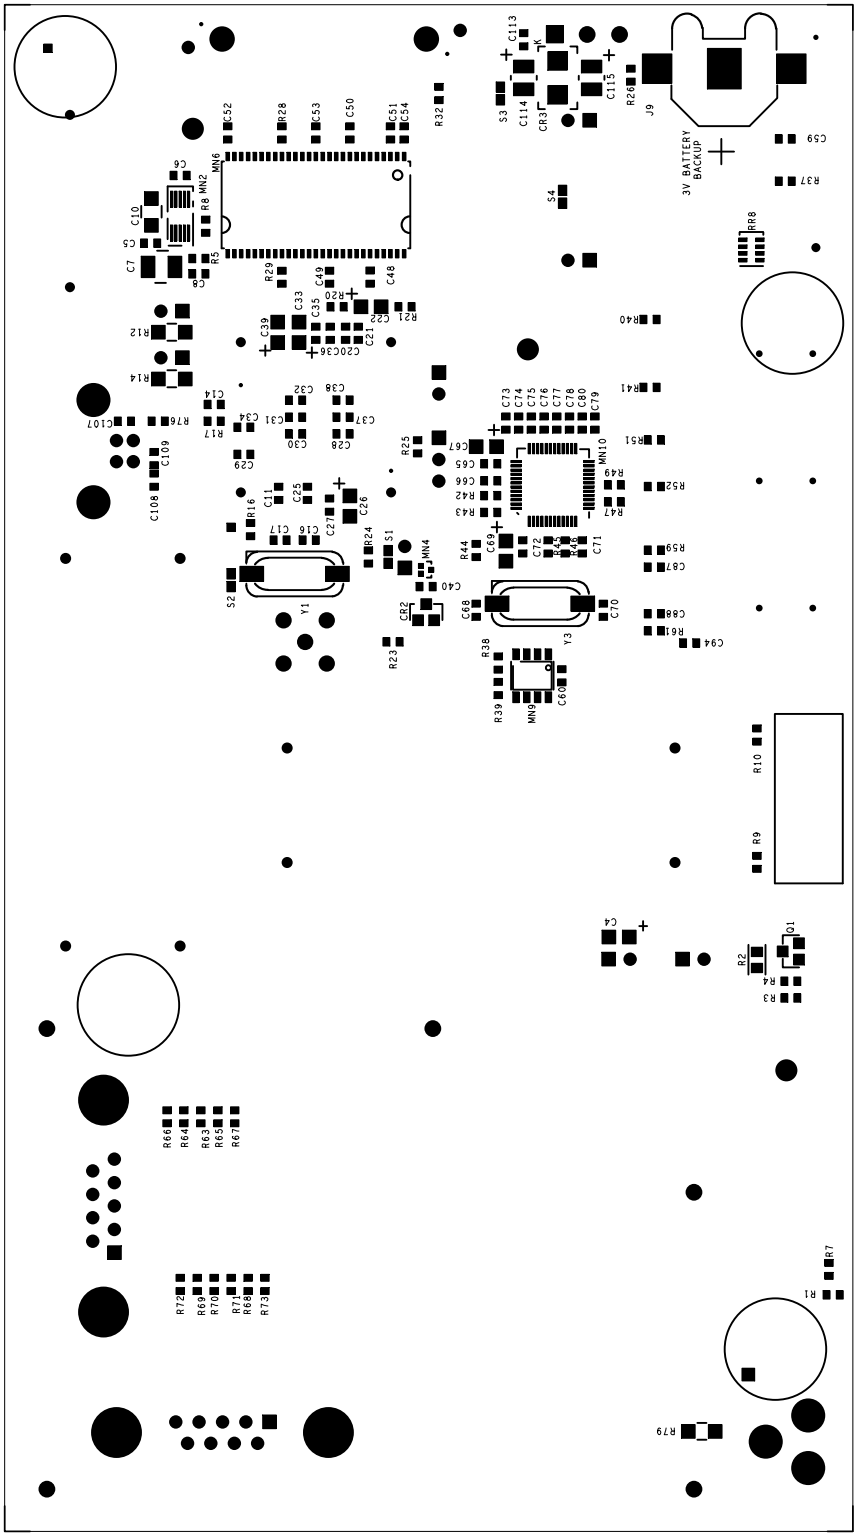

2.4 Powering Up the Board

The AT91SAM9RL-EK requires 5V DC (±5%). DC power is supplied to the board via the 2.1 mm by 5.5 mm socket J1. Coaxial plug center positive standard.

2.5 Backup Power Supply

The user has the possibility to plug a battery (3V Lithium Battery CR1225 or equivalent) in order to permanently power the backup part of the device.

Refer to Section 4.

2.6 Getting Started

The AT91SAM9RL-EK evaluation board is delivered with a CD-ROM containing all necessary information and step-by-step procedures for working with the most common development toolchains. Please refer to this CD-ROM, or to the AT91 web site, http://www.atmel.com/products/AT91/, for the most up-to-date information on getting started with the AT91SAM9RL-EK.

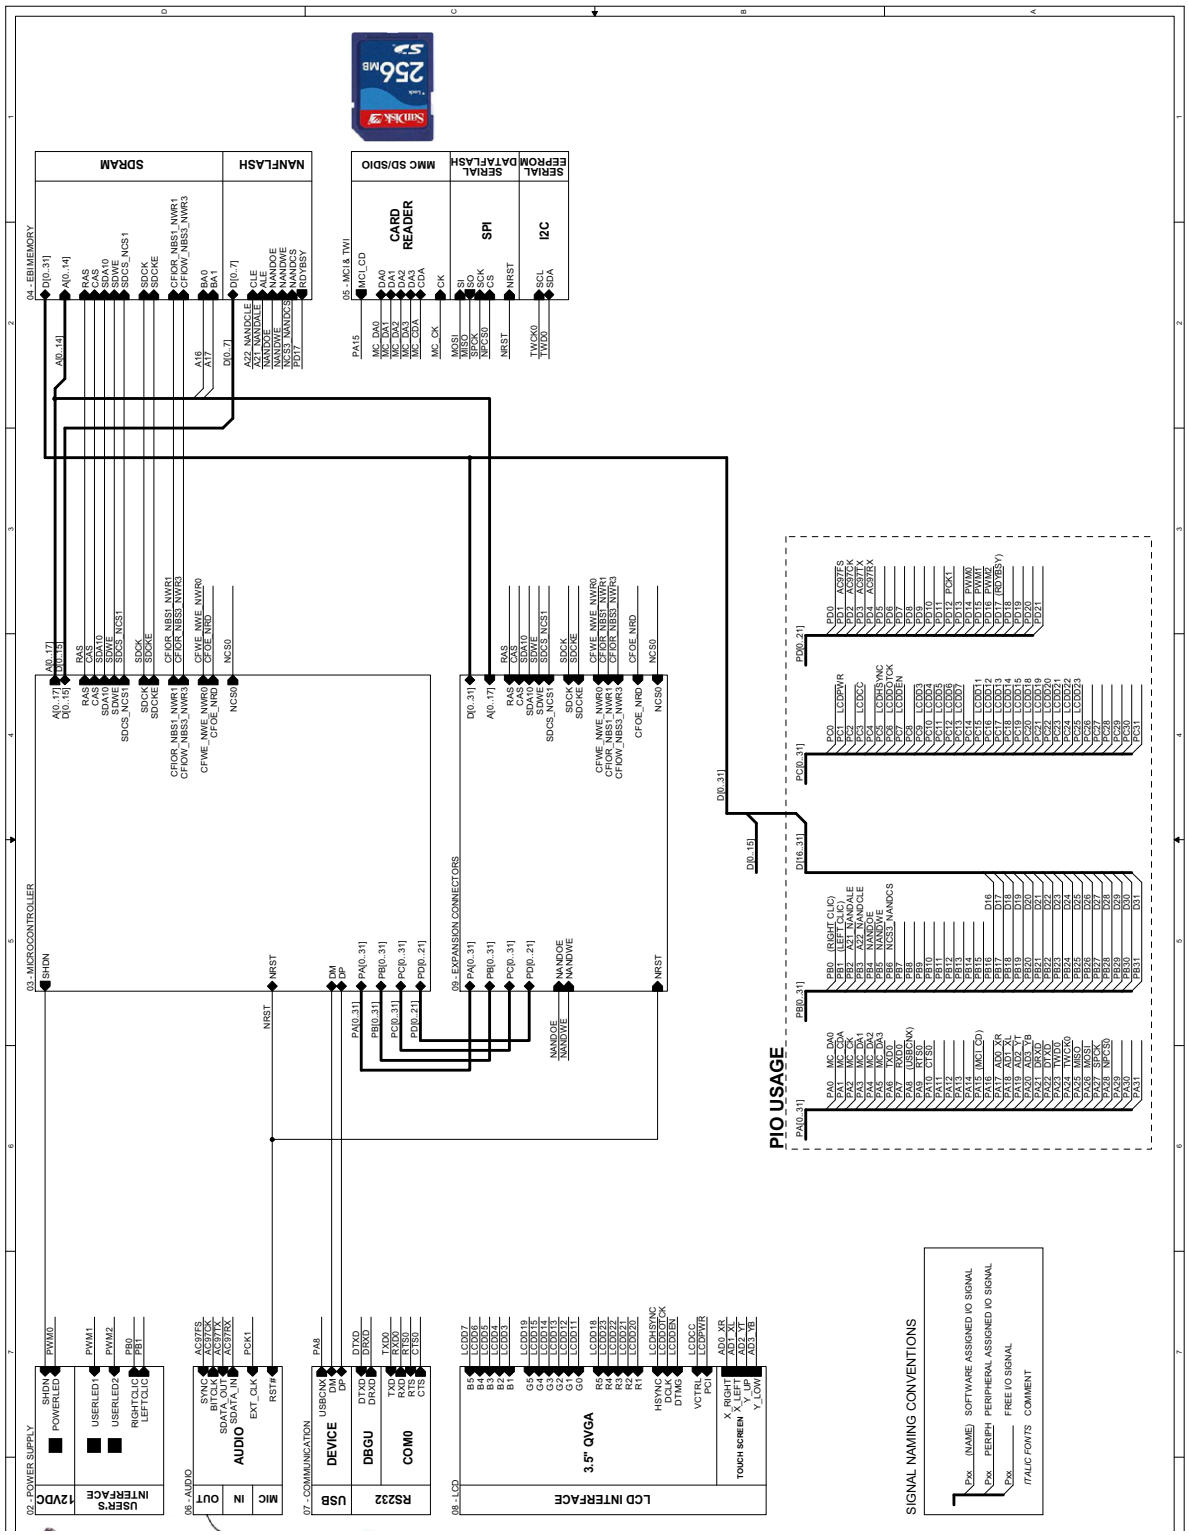
Figure 2-3. AT91SAM9RL-EK Block Diagram



Section 3

Board Description

3.1 AT91SAM9RL64 Microcontroller

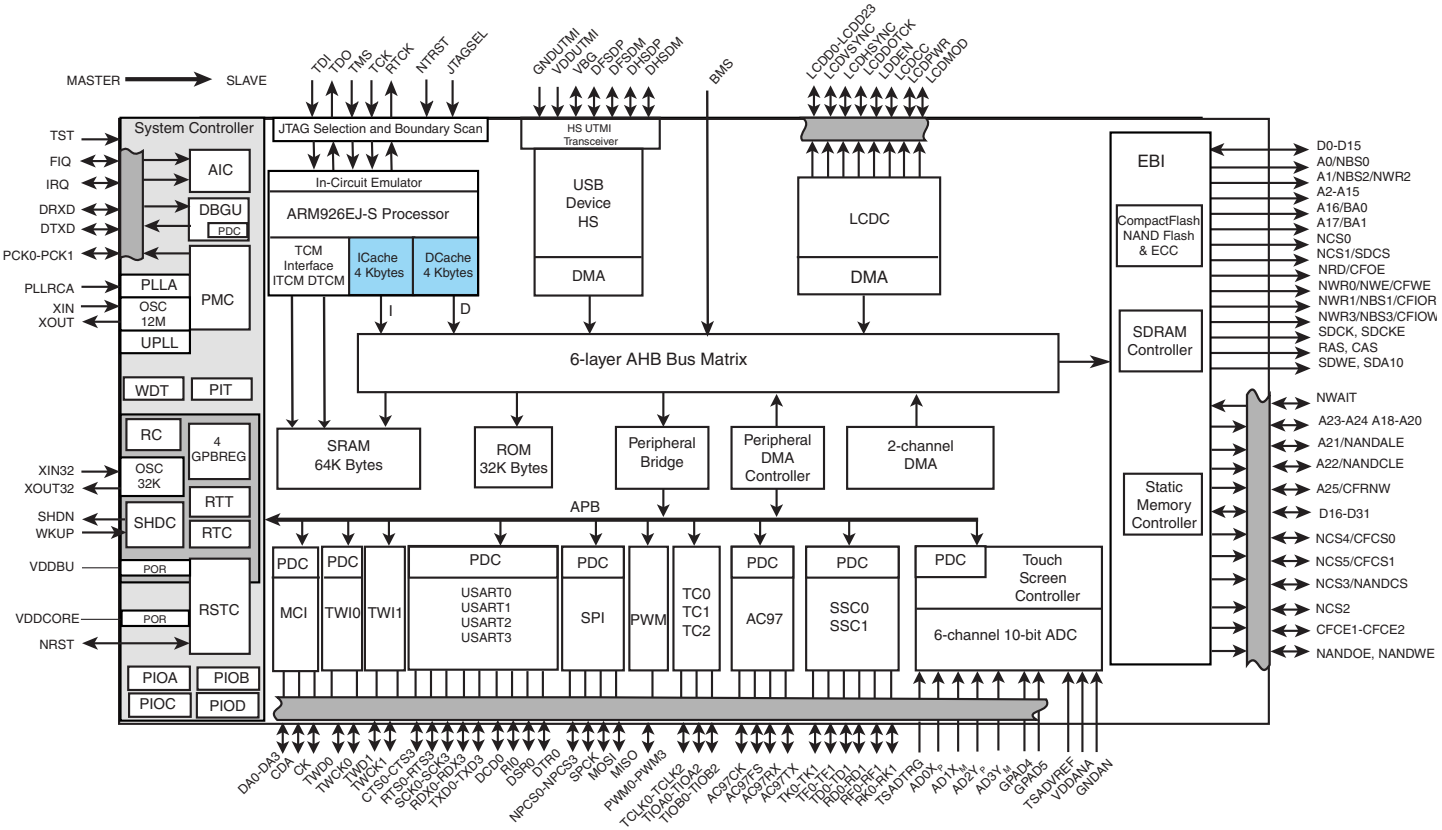
- Incorporates the ARM926EJ-S™ ARM® Thumb® Processor
  - DSP Instruction Extensions
  - ARM Jazelle® Technology for Java® Acceleration
  - 4 Kbyte Data Cache, 4 Kbyte Instruction Cache, Write Buffer
  - 210 MIPS at 190 MHz
  - Memory Management Unit
  - EmbeddedICE™ In-circuit Emulation, Debug Communication Channel Support
  - Mid-level implementation Embedded Trace Macrocell™
- Multi-layer AHB Bus Matrix for Large Bandwidth Transfers
  - Six 32-bit-layer Matrix
  - Boot Mode Select Option, Remap Command
- One 32-KByte internal ROM, Single-cycle Access at Maximum Speed
- One 64-KByte internal SRAM, Single-cycle Access at Maximum Speed
  - 4 Blocks of 16 Kbytes Configurable in TCM or General-purpose SRAM on the AHB Bus Matrix
- Single-cycle Accessible on AHB Bus at Bus Speed
- Single-cycle Accessible on TCM Interface at Processor Speed
- 2-channel DMA
  - Memory to Memory Transfer
  - 16 Bytes FIFO
  - LInked List
- External Bus Interface (EBI)
  - EBI Supports SDRAM, Static Memory, ECC-enabled NAND Flash and CompactFlash®
- LCD Controller
  - Supports Passive or Active Displays
  - Up to 24 Bits per Pixel in TFT Mode, Up to 16 bits per Pixel in STN Color Mode
  - Up to 16M Colors in TFT Mode, Resolution Up to 2048x2048, Virtual Screen Support
- High Speed (480 Mbit/s) USB 2.0 Device Controller
  - On-Chip High Speed Transceiver, UTMI+ Physical Interface
  - Integrated FIFOs and Dedicated DMA
  - 4 Kbyte Configurable Integrated DPRAM
- Fully-featured System Controller, including
  - Reset Controller, Shutdown Controller

  - Four 32-bit Battery Backup Registers for a Total of 16 Bytes
  - Clock Generator and Power Management Controller
  - Advanced Interrupt Controller and Debug Unit
  - Periodic Interval Timer, Watchdog Timer and Real-time Timer and Real-time Clock
- Reset Controller (RSTC)
  - Based on Two Power-on Reset Cells
  - Reset Source Identification and Reset Output Control
- Shutdown Controller (SHDC)
  - Programmable Shutdown Pin Control and Wake-up Circuitry
- Clock Generator (CKGR)
  - Selectable 32768 Hz Low-power oscillator or Internal Low-power RC Oscillator on Battery Backup Power Supply, Providing a Permanent Slow Clock
  - 12 MHz On-chip Oscillator for Main System Clock and USB Clock
  - One PLL up to 240 MHz
  - One PLL 480 MHz Optimized for USB HS
- Power Management Controller (PMC)
  - Very Slow Clock Operating Mode, Software Programmable Power Optimization Capabilities
  - Two Programmable External Clock Signals
- Advanced Interrupt Controller (AIC)
  - Individually Maskable, Eight-level Priority, Vectored Interrupt Sources
  - One External Interrupt Sources and One Fast Interrupt Source, Spurious Interrupt Protected
- Debug Unit (DBGU)
  - 2-wire UART and support for Debug Communication Channel
- Periodic Interval Timer (PIT)
  - 20-bit interval timer plus 12-bit interval counter
- Watchdog Timer (WDT)
  - Key-protected, Programmable Only Once, Windowed 16-bit Counter Running at Slow Clock
- Real-time Timer (RTT)
  - 32-bit Free-running Backup Counter Running at Slow Clock with 16-bit Prescaler
- Real-time Clock (RTC)
  - Time, Date and Alarm 32-bit Parallel Load
  - Low Power Consumption
  - Programmable Periodic Interrupt
- One 6-channel 10-Bit Analog-to-Digital Converter
  - Touch Screen Interface Compatible with Industry Standard 4-wire Sensitive Touch Panels
- Four 32-bit Parallel Input/Output Controllers (PIOA, PIOB, PIOC and PIOD)
  - 118 Programmable I/O Lines Multiplexed with up to Two Peripheral I/Os for 217-ball BGA package
  - Input Change Interrupt Capability on Each I/O Line
  - Individually Programmable Open-drain, Pull-up resistor and Synchronous Output
- 24-channel Peripheral DMA Controller (PDC)
- One Multimedia Card Interface (MCI)
  - SDCard/SDIO 1.0 and MultiMedia Card 3.1 Compliant

  - Automatic Protocol Control and Fast Automatic Data Transfers with PDC
- Two Synchronous Serial Controllers (SSC)
  - Independent Clock and Frame Sync Signals for Each Receiver and Transmitter
  - I²S Analog Interface Support, Time Division Multiplex Support
  - High-speed Continuous Data Stream Capabilities with 32-bit Data Transfer
- One AC97 Controller (AC97C)
  - 6-channel Single AC97 Analog Front End Interface, Slot Assigner
- Four Universal Synchronous/Asynchronous Receiver Transmitters (USART)
  - Individual Baud Rate Generator, IrDA Infrared Modulation/Demodulation, Manchester Encoding/Decoding
  - Support for ISO7816 T0/T1 Smart Card, Hardware Handshaking, RS485 Support
- One Master/Slave Serial Peripheral Interface (SPI)
  - 8- to 16-bit Programmable Data Length, Four External Peripheral Chip Selects
  - High-speed Synchronous Communications
- One Three-channel 16-bit Timer/Counter (TC)
  - Three External Clock Inputs, Two Multi-purpose I/O Pins per Channel
  - Double PWM Generation, Capture/Waveform Mode, Up/Down Capability
- One Four-channel 16-bit PWM Controller (PWMC)
- Two Two-wire Interfaces (TWI)
  - Compatible with Standard Two-wire Serial Memories
  - One, Two or Three Bytes for Slave Address
  - Sequential Read/Write Operations
  - Master, Multi-master and Slave Mode Operation
  - Bit Rate: Up to 400 Kbits
  - General Call Supported in Slave mode
  - Connection to Peripheral DMA Controller (PDC) Channel Capabilities Optimizes Data Transfers in Master Mode Only (TWI0 only)
- SAM-BA Boot Assistant
  - Default Boot Program
  - Interface with SAM-BA Graphic User Interface
- IEEE 1149.1 JTAG Boundary Scan on All Digital Pins
- Required Power Supplies:
  - 1.08 to 1.32V for VDDCORE, VDDPLLB and VDDBU
  - 3.0V to 3.6V for VDDPLLA, VDDANA, VDDUTMI and VDDIOP
  - Programmable 1.65V to 1.95V or 3.0V to 3.6V for VDDIOM
- Available in a 144-ball BGA (AT91SAM9R64) and a 217-ball LFBGA (AT91SAM9RL64) Package

3.2 AT91SAM9RL Block Diagram

Figure 3-1. AT91SAM9RL Block Diagram



3.3 Microcontroller

- One AT91SAM9RL64 217-ball LFBGA fitted on board

3.4 Memory

- 32 Kbytes of Internal ROM
- 64 Kbyte of Internal SRAM
- Atmel serial DataFlash
- 64 Mbytes of SDRAM memory (32-bit bus width)
- 256 Mbytes of NAND Flash memory (8-bit bus width)
- TWI serial EEPROM (footprint only)

3.5 Clock Circuitry

- 12 MHz standard crystal for the embedded oscillator

- Software selectable, 32768Hz Low-power external standard crystal Oscillator or Internal Low Power RC Oscillator

3.6 Reset Circuitry

- Internal reset controller with bi-directional reset pin
- External reset pushbutton

3.7 Shutdown Controller

- Programmable shutdown and Wake-Up
- Wake-up push button

3.8 Power Supply Circuitry

- On-board 1.2V High Efficiency step-down charge pump regulator with shutdown control
- On-board 3.3V linear regulator with shutdown control

3.9 Remote Communication

- One serial interface (DBGU COM Port) via RS-232 DB9 male socket
- One additional serial interface (COM Port 1) with RTS/CTS handshake control via RS-232 DB9 male socket
- One High Speed USB 2.0 port 480 Mbits per second (UDP)

3.10 Audio Stereo Interface

- One AC97 audio CODEC with:
- One 32 Ohm Stereo Headset output (J16) with master volume and mute controls
- One line-in
- One Mono/Stereo Microphone input.

3.11 User Interface

- Two user input pushbuttons
- Two user green LED
- One yellow power LED (can be also software controlled)

3.12 Debug Interface

- 20-pin JTAG/ICE interface connector
- DBGU COM port

3.13 Expansion Slot

- One DataFlash, SD/MMC card slot
- All I/Os of the AT91SAM9RL are routed to peripheral extension connectors (J23, J24, J25, J26).
- All EBI Signals of the AT91SAM9RL are routed to extension footprint connectors (J27). Refer to the Atmel application note Connecting EBI Memory Daughter Boards to AT91SAM Evaluation Boards, lit. no. 6309.
- This allows the developer to check the integrity of the components and to extend the features of the board by adding external hardware components or boards.

3.14 PIO Usage

Jumpers

4.1 Jumpers

Table 4-1. Jumpers Configuration

Designation	Default Setting	Feature
J2	Closed	3.3V Jumper(1)
J3	Closed	Forces power on. To use the software shutdown control, J3 must be opened. 3V battery backup must be present.
J5	Closed	VDDPLLB Jumper(1)
J6	Closed	VDDPLLA Jumper(1)
J8	Closed	VDDBU Jumper(1)
J10	Closed	VDDCORE Jumper(1)
J11	1-2	BMS (Boot Mode Select) 1-2: Internal ROM 2-3: NCS0
J12	Closed	Enables the use of the embedded NAND FLASH device (MN7)
J13	Closed	Enables the use of the embedded SERIAL DATAFLASH device (MN8)

Note: 1. These jumpers are provided for power consumption measurement use. By default, they are closed. To use this feature, the user has to open the strap and insert an ammeter.

4.2 JTAG/ICE

Table 4-2. JTAG/ICE Configuration

Designation	Default Setting	Feature
S1	Opened	Selects ICE mode or JTAG mode
R11	Soldered	Enables the ICE NTRST input
R13	Soldered	Enables the ICE NRST input

4.3 Microcontroller Clock

Table 4-3. Microcontroller Clock Configuration

Designation	Default Setting	Feature
S2	Opened	To use an external source clock, the user has to close S2 and populate J7. In this case, C16, C17 and J7 have to be unsoldered.

4.4 Memory

Table 4-4. Memory Configuration

Designation	Default Setting	Feature
SDRAM (MN5 & MN6)		
R29	Soldered	Enables MN5 Chip select access
R30	Soldered	Enables MN6 Chip select access
NANDFLASH (MN7)		
J12	Closed	Enables the use of the NANDFLASH device
R32	Soldered	Enables the use of the Ready/Busy signal
S3	Opened	Disables the write protect
SERIAL DATAFLASH (MN8)		
J13	Closed	Enables the use of the DATAFLASH device
S4	Opened	Disables the write protect.
TWI SERIAL EEPROM NOT POPULATED (MN9)		

4.5 Miscellaneous

Refer to the TOP level schematic for the PIO usage.

Table 4-5. Miscellaneous

Designation	Default Setting	Feature
USB HIGH SPEED DEVICE INTERFACE		
R75	Soldered	USB DEVICE: Enables the use of the USBCNX signal
DBGU COM PORT		
R64	Soldered	Enables the use of DTXD output signal
R66	Soldered	Enables the use of DRXD input
RS232 COM PORT: Enable the use of Input/output signals		

Table 4-5. Miscellaneous

Designation	Default Setting	Feature
R70 R71 R72 R73	Soldered Soldered Soldered Soldered	TXD RTS RXD CTS
TP1	N.A	GND Test point
TP2	N.A	GND Test point
TP3	N.A	GND Test point

Section 6

Errata

6.1 Pull-up Resistor on the Wrong Pin

The RTCK pin (connector J4, pin 11), which is an input, has a pull-up resistor whereas the TCK pin (connector J4, pin 9), which is an output, has not.

Problem Fix/Workaround

The user may observe a possible increase in the power consumption on VDDIO (a few micro-amps) but it does not prevent the JTAG-ICE interface to work correctly on this board.

Correct schematics would have a pull-up on the TCK pin to tie the CMOS input to a known level, in order to avoid a possible pad oscillation and a possible increase in power consumption.

6.2 VDDCORE Power Consumption Measurement Impossible

If the AT91SAM9RL64 device is an engineering sample (ES), VDDCORE power consumption measurement is impossible on J10 Jumper.

Problem Fix/Workaround

None.
