---

**dsPIC33CK Curiosity  
Development Board  
User's Guide**

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our website ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXXXXA”, where “XXXXXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the dsPIC33CK Curiosity Development Board. Items discussed in this chapter include:

- [Document Layout](#)
- [Conventions Used in this Guide](#)
- [Recommended Reading](#)
- [The Microchip Website](#)
- [Product Change Notification Service](#)
- [Customer Support](#)
- [Document Revision History](#)

## DOCUMENT LAYOUT

This user's guide provides an overview of the dsPIC33CK Curiosity Development Board. The document is organized as follows:

- **Chapter 1. “Overview”** – This chapter introduces the dsPIC33CK Curiosity Development Board and provides a brief overview of its various features.
- **Chapter 2. “Hardware”** – This chapter describes how to program/debug the board using the on-board programmer and the main circuit elements of the board.
- **Appendix A. “Board Layout and Schematics”** – This appendix provides schematic diagrams for the dsPIC33CK Curiosity Development Board.
- **Appendix B. “Bill of Materials (BOM)”** – This appendix provides the component list used in assembling the board.

# dsPIC33CK Curiosity Development Board User's Guide

## CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

### DOCUMENTATION CONVENTIONS

Description	Represents	Examples
<b>Arial font:</b>		
Italic characters	Referenced books	<i>MPLAB<sup>®</sup> IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u><i>File&gt;Save</i></u>
Bold characters	A dialog button	Click <b>OK</b>
	A tab	Click the <b>Power</b> tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
<b>Courier New font:</b>		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets [ ]	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}
Ellipses...	Replaces repeated text	var_name [, var_name...]
	Represents code supplied by user	void main (void) { ... }

## RECOMMENDED READING

This user's guide describes how to use the dsPIC33CK Curiosity Development Board. The device-specific data sheets contain current information on programming the specific microcontroller or Digital Signal Controller (DSC) devices. The following Microchip documents are recommended as supplemental reference resources:

### **MPLAB® XC16 C Compiler User's Guide (DS50002071)**

This comprehensive guide describes the usage, operation and features of Microchip's MPLAB XC16 C compiler (formerly MPLAB C30) for use with 16-bit devices.

### **MPLAB® X IDE User's Guide (DS50002027)**

This document describes the installation and implementation of the MPLAB X IDE software.

### **dsPIC33CK256MP508 Family Data Sheet (DS70005349)**

Refer to this document for detailed information on the dsPIC33CK single core Digital Signal Controllers (DSCs). Reference information found in this data sheet includes:

- Device memory maps
- Device pinout and packaging details
- Device electrical specifications
- List of peripherals included on the devices

and are available for download from the Microchip website ([www.microchip.com](http://www.microchip.com)).

## THE MICROCHIP WEBSITE

Microchip provides online support via our website at [www.microchip.com](http://www.microchip.com). This website is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the website contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events; and listings of Microchip sales offices, distributors and factory representatives

## PRODUCT CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip website at [www.microchip.com](http://www.microchip.com), click on **Product Change Notification** and follow the registration instructions.

# dsPIC33CK Curiosity Development Board User's Guide

---

---

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Corporate Application Engineer (CAE)
- Embedded Solutions Engineer (ESE)
- Field Application Engineer (FAE)

Customers should contact their distributor, representative or Embedded Solutions Engineer (ESE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the website at:

<http://www.microchip.com/support>.

## DOCUMENT REVISION HISTORY

### **Revision A (April 2019)**

This is the initial release of this document.

## Chapter 1. Overview

### 1.1 INTRODUCTION

The dsPIC33CK Curiosity Development Board (DM330030) is intended as a cost-effective development and demonstration platform for the dsPIC33CK256MP508 family of single core, high-performance Digital Signal Controllers (DSCs). The main hardware features of the board are highlighted in Figure 1-1.

**FIGURE 1-1: dsPIC33CK CURIOSITY DEVELOPMENT BOARD**

1. dsPIC33CK256MP508 single core, 16-bit Digital Signal Processor (DSP) target device.
2. Integrated PICkit™ On-Board 4 (PKOB4) programmer/debugger.
3. 2x mikroBUS™ interfaces for hardware expansion, compatible with a wide range of existing click boards™ from MikroElektronika ([www.mikroe.com](http://www.mikroe.com)).
4. 1x Red/Green/Blue (RGB) LED.
5. 2x general purpose orange indicator LEDs.
6. 3x general purpose push buttons.
7. 1x MCLR Reset push button.
8. 10k potentiometer.
9. USB to UART interface.
10. Female, 100 mil pitch, I/O pin access headers for probing and connecting to all target microcontroller GPIO pins.

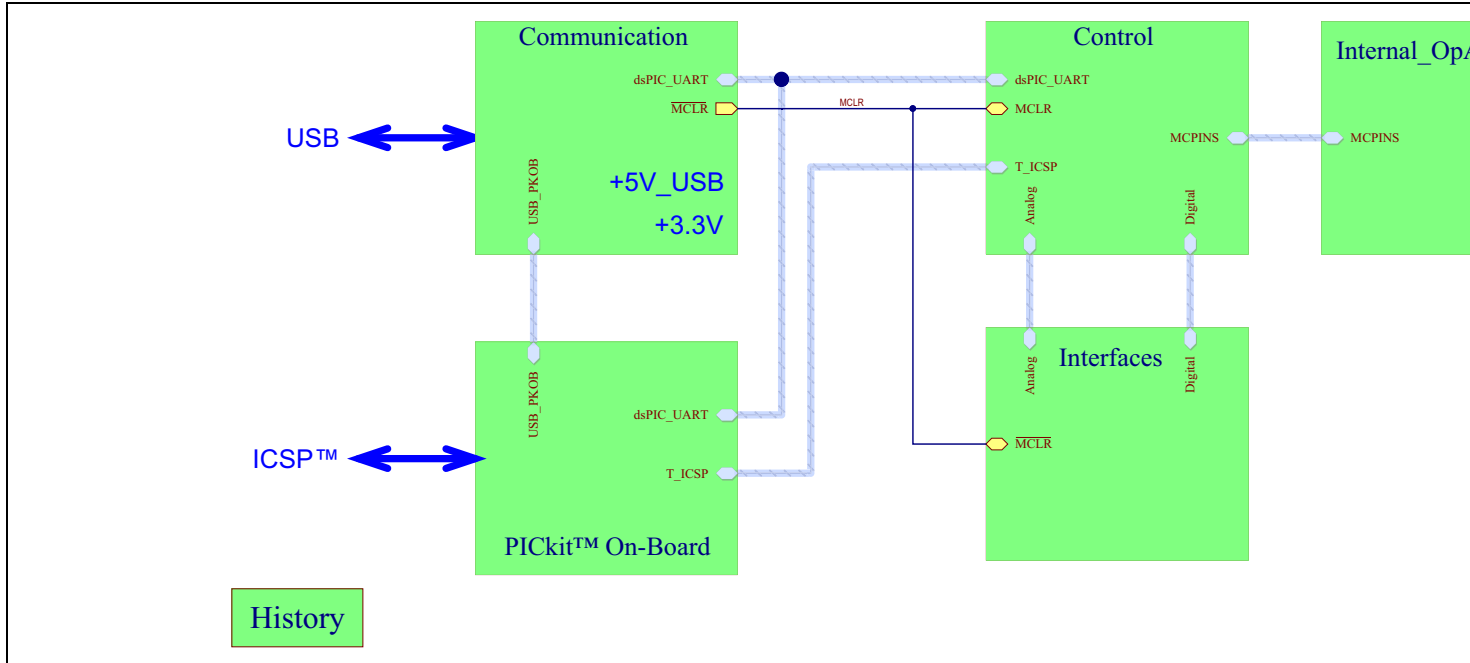

# dsPIC33CK Curiosity Development Board User's Guide

---

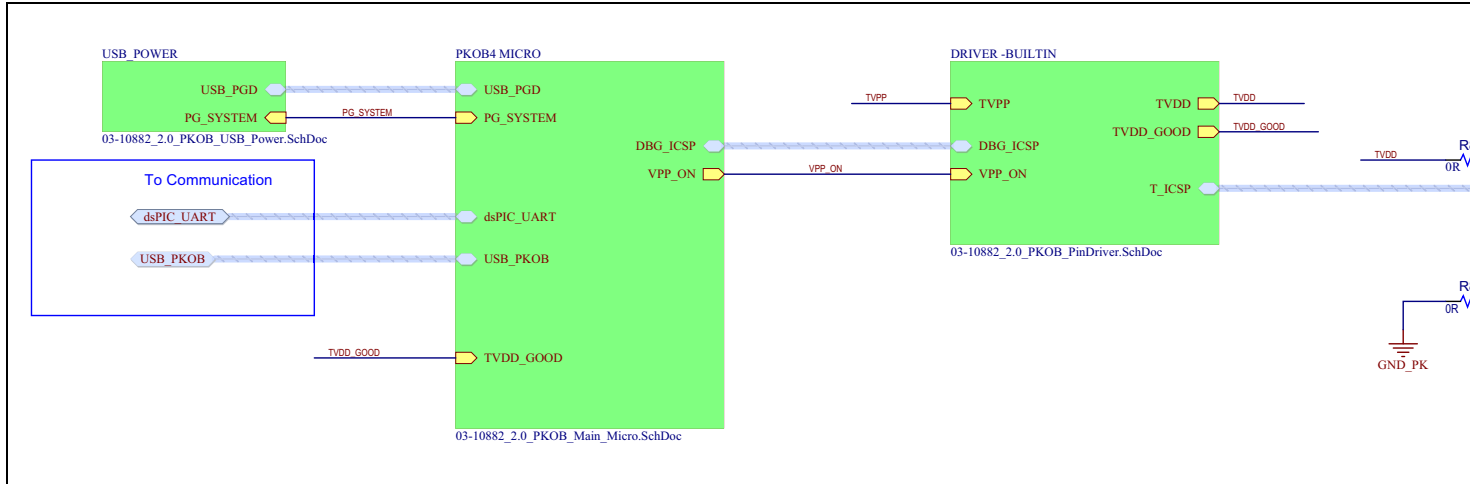

11. Configurable jumper (J11) for selecting +5V USB power or +5V external power.
12. Analog input section for dedicated ADC Core 0, Core 1 and shared core.
13. ADC reference generator MCP6021 op amp.
14. dsPIC33CK LDO.

[Figure 1-2](#) and [Figure 1-3](#) show the block diagrams of the dsPIC33CK Curiosity Development Board and the PKOB main system. For more detailed schematics, refer to [Appendix A. "Board Layout and Schematics"](#).

NOTES:

---

---

## Chapter 2. Hardware

---

---

### 2.1 POWERING THE BOARD

#### 2.1.1 USB Power

This board is intended to be primarily powered from the USB Micro-B connector, J7. The official “*USB 2.0 Specification*” restricts USB applications to consuming no more than 500 mA of USB VBUS power from the host.

#### 2.1.2 External Power

An external +5 VDC may optionally be connected through the J2, J4 100 mil connector, and the 2-pin jumper should be moved from +5V USB to +5V external power on the J11 3-pin connector.

An external +3.3 VDC may optionally be connected through the J1, J3 100 mil connector to power an external circuit from the dsPIC33CK LDO. However, a *maximum* of 50 mA consumption is recommended.

#### 2.1.3 mikroBUS™ Power

An external +5 VDC may optionally be connected through the J2, J4 100 mil connector. In this case, the 2-pin jumper should be moved from +5V USB to +5V external power on the J11 3-pin connector. A maximum of 400 mA is recommended to be supplied to the mikroBUS click boards™.

The mikroBUS +3.3 VDC power is connected to the +3V3PK on the PKOB4 LDO, which can supply up to 500 mA.

### 2.2 USING THE PROGRAMMED DEMO FIRMWARE

The development board comes programmed with some basic demo firmware, which exercises several of the board hardware features. The demo project for the dsPIC33CK Curiosity Development Board implements an RGB color mixing application. In the demo, the potentiometer can be used to adjust each color channel intensity independently, while the push buttons are used to select the channel to be adjusted.

The source code for the demo can be obtained from:

[www.microchip.com/dspic33ckcuriosity](http://www.microchip.com/dspic33ckcuriosity)

### 2.3 REPROGRAMMING AND DEBUGGING THE dsPIC33CK256MP508 DEVICE

The board has a PICKit™ On-Board (PKOB) programmer/debugger circuit, which can be used to program and debug the dsPIC33CK256MP508 target device (U1). Alternatively, an external programmer/debugger tool can be connected to the board via the 6-pin in-line connector J8, using a male-male 100 mil pitch 6-pin header.

# dsPIC33CK Curiosity Development Board User's Guide

The PKOB circuit should automatically enumerate and be recognized by the MPLAB® X IDE, v5.05 or later, when the dsPIC33CK Curiosity Board is connected to the host via the USB Micro-B connector, J7. No custom USB driver installation is necessary as the PKOB circuit relies on standard OS provided Human Interface Device (HID) drivers, and therefore, the driver installation should be fully automatic. When plugged in, the PKOB programmer/debugger tool can be selected from the MPLAB X project properties page by selecting the device under: Hardware Tools>Microchip Kits>Starter Kits (PKOB)>Curiosity/Starter Kits (PKOB4), as shown in [Figure 2-1](#).

**FIGURE 2-1: dsPIC33CK CURIOSITY PKOB TOOL SELECTION**

## 2.4 USING THE USB-UART INTERFACE

The board is equipped with a USB-UART interface based around the MCP2221A chip. The MCP2221A chip implements the standard Communication Device Class (CDC) – Abstract Control Model (ACM) protocol, and therefore, can use standard USB drivers that are provided with modern Windows®, Mac® and Linux® operating systems. Under most operating systems, the USB driver installation will be fully automatic. Under certain older operating systems, or if the device is attached to an older than Windows 10 machine without an active Internet connection, manual installation of the drivers may be necessary. In this case, the driver package can be downloaded from:

[www.microchip.com/mcp2221a](http://www.microchip.com/mcp2221a)

Details on how to access the serial port from Mac and Linux operating systems can also be found in the associated collateral for the MCP2221A. Under Windows, after successful USB driver installation, the device will appear as a “COMx” port object, which standard serial terminal programs can open/read/write to and from.

---

---

## 2.5 CIRCUIT DETAILS

This section highlights some of the circuit elements and provides an explanation for their intent and function.

### 2.5.1 Jumpers/Headers/Connectors

J1, J3 – These are populated 2x25-pin, 100 mil jumper headers, in which a power module or any other custom designed board may optionally be inserted to access the microcontroller's digital pins. Use the triangle alignment mark on J1, pin 1 (underneath VREF, see [Figure 1-1](#)) to connect the dsPIC33CK Curiosity Development Board to other boards.

J2, J4 – These are populated 2x25-pin, 100 mil jumper headers, in which a power module or any other custom designed board may optionally be inserted to access the microcontroller's analog and digital pins.

J5, J6 – These are female headers that implement the mikroBUS Interfaces A and B, which are used to attach hardware daughter boards to expand the functionality of the development board.

J7 – This is a standard female USB Micro-B connector, which connects to the MCP2221A USB-UART converter chip and the on-board MPLAB PKOB4 programmer/debugger. This USB interface has a data interface and supplies power to the rest of the board, as well as to the mikroBUS A and B, up to 400 mA.

J8 – This is an unpopulated 6-pin staggered header interface that can optionally be used to connect an external programmer/debugger to the target microcontroller, U1. The J8 header connects to the debug port, PGx3. The holes are slightly staggered, which provides some friction retention force without requiring physical soldering when a straight male-male or right-angle male-male header is installed into J8.

J9 – This is an unpopulated 2-pin, 100 mil jumper header, which may optionally be used to insert a current meter in series with the U1 VDD current path to measure the microcontroller's current consumption. In order to measure the U1 current, the trace (NT1) on the bottom of the PCB, that shorts the two pins of J1, should be cut and a 2-pin jumper should be soldered into J9.

J10, J12 – These are populated 2x2-pin, 100 mil jumper headers, which may optionally be used to insert GND\_D of a power module or any other custom designed boards that access the microcontroller's analog and digital pins. Also, it has the purpose of a mechanical key that will prevent reverse connection.

### 2.5.2 User Interface (UI)

The dsPIC33CK Curiosity Board contains a User Interface (UI), easily accessible on the right side (see [Figure 1-1](#)). The UI has the following elements:

- One RGB LED
- A 10K Potentiometer
- Three Push Buttons
- Two Debug Orange LEDs

Each element can be programmed for any purpose to create the desired interaction between the user and the board behavior.

## 2.5.3 ADC Op Amp Analog RC Section

The board contains three RC filter components for each individual ADC core of the microcontroller, U1. They are identical; the only difference is that one connects to the dedicated ADC Core 1, another to the dedicated ADC Core 0 and the third one to the shared ADC core.

The default configuration is the internal op amp variant, in which all passive components, R and C, are populated for the filter, feedback and bias circuits.

To use the external op amp, remove R59, R75 and R81 resistors and populate C24, C25 and C26 with 5600 pF, 50V, 0603, COG resistors to enable an RC filter of  $F_c = 506$  kHz.

There is an on-board MCP6021 op amp to power the internal VREF for the three op amps with 1.65V ( $V_{DD}/2$ ) voltage reference.

VREF\_EXT can also be used from connector J2 by removing, R30, 75 Ohm, and moving it into the R31 place (default DNP).

The RC filters have a cutoff frequency:

### EQUATION 2-1:

$$F_c = \frac{1}{2\pi RC}$$

where R is the resistance and C is the capacitor of the filter.

Example: R = 56 Ohms and C = 5600 pF, then  $F_c = 507509$  [Hz] or 507 [kHz].

Rise/fall time, with a steady state of 10% to 90%, is proportional to the time constant:

$$\tau = RC.$$

### EQUATION 2-2:

$$t_r = 2.197\tau$$

For example: R = 56 Ohms and C = 5600 pF, then  $t_r = 0.68$   $\mu$ s.

## Appendix A. Board Layout and Schematics

This appendix contains the pinout, the schematics and the board layouts for the dsPIC33CK Curiosity Board. The topics covered in this appendix include:

- [Pinout](#)
- [dsPIC33CK Curiosity Development Board Schematics](#)
- [dsPIC33CK Curiosity Development Board PCB Layout](#)

### A.1 PINOUT

[Table A-1](#) and [Table A-2](#) show the pinout and the electrical parameters for connectors, J1 and J2, respectively.

## A.3 dsPIC33CK CURIOSITY DEVELOPMENT BOARD PCB LAYOUT

The dsPIC33CK Curiosity Board is a four-layer FR4, 1.6 mm, Plated-Through-Hole (PTH) PCB construction. Figure A-9 through Figure A-10 illustrate the PCB layers.
