

DESCRIPTION

The GC6000 series of RF/Microwave noise diodes represent the state of the art in noise device technology. By carefully controlling junction doping profiles and mesa geometry, these devices provide the broadest, most uniform noise response available. Outputs are true symmetrical Gaussian white noise with predictable thermal performance. Choose from dozens of case style, including glass, ceramic as well as EPSM[®] (enhanced performance surface mount) for commercial pick and place assembly and die form for hybrid systems.

KEY FEATURES

- Multi-Octave Bandwidth
- Wide Bias Window
- Uniform Power Output
- High Reliability
- RoHS Compliant¹

APPLICATIONS

The GC6000 Series of devices are designed to generate white noise for test equipment and specialty ECM applications. These devices can be used in narrow and broadband noise sources for Noise Figure testing as well as RF Fuses.

APPLICATIONS/BENEFITS

- RF Fuses
- Noise Sources
- Noises Figure Calibration
- Spectrum Analyzers
- Signal Path Fade Test Sets
