# Electronic Telephone Line Switch 

## Features

- 350 V breakdown voltage
- $18 \Omega$ maximum switch resistance
- Current limiting protection
- Operates at 2.3 V input

## Applications

- Telephone handsets
- Modems
- Fax machines
- Answering machines
- Remote meter reading
- Telephone interface products

## General Description

The Supertex HT19LG is an electronic line switch circuit that replaces the mechanical hook switch contact or a discrete hook switch in a telephone handset or modem. It switches the positive side of the telephone line using control inputs that are referenced to the negative side of the line. In its off state, it can withstand 350 V on the positive input. In its on state, it has a maximum series resistance of $18 \Omega$.

The device provides current limiting determined by an external resistor. There are three control inputs. The HKS pin turns on the hook switch when connected to the TPG pin. This can be accomplished by using a mechanical switch which closes when the handset is physically off-hook. The LS pin allows a logic signal to turn on the hook switch. The dial pulse, Pin 6, is used to turn the hook switch off for pulse dialing. The dial pulse ( $\overline{\mathrm{DP}}$ ) is active low.

## Typical Application Circuit

Ordering Information

| Device | Package Option |
| :---: | :---: |
|  | 8-Lead SOIC (Narrow Body) <br> 4.90x3.9mm body <br> $1.75 m m$ hight (max) <br> 1.27mm pitch |
|  | HT19LG-G |

-G indicates package is RoHS compliant ('Green')

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\text {TPG }}$, Input line voltage | +350 V |
| $\mathrm{~V}_{\mathrm{TP}}$, Output line voltage | +18 V |
| $\overline{\mathrm{DP}}$ continuous input voltage | +10 V |
| Storage temperature | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Junction temperature | $+150^{\circ} \mathrm{C}$ |
| Soldering temperature* | $+300^{\circ} \mathrm{C}$ |
| Power dissipation | 0.8 W |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

* Distance of 1.6 mm from case for 10 seconds.

## Pin Configuration

## Logic Truth Table

| HKS | LS | $\overline{\mathrm{DP}}$ | Switch State |
| :---: | :---: | :---: | :---: |
| $H$ | L or Z | H or $Z$ | H or $Z$ |
| H | H or $Z$ | ON |  |
| L or Z | H or $Z$ | H or $Z$ | OFF |
| L or Z | H | L | ON |
| $X$ | X | OFF |  |

Z = high impedance, open circuit
$X=$ irrelevant
$L=$ logic level low
$H=$ logic level high

## Block Diagram

Pin Description

| Pin | Name | Description |
| :---: | :---: | :--- |
| 1 | TPG | Positive input side of a telephone line, typically tip side. |
| 2 | HKS | Hookswitch input. Connect HKS to TPG to turn on the hook switch. Internally pulled low with a high value <br> resistor. |
| 3 | GND | Device ground. Negative side of a telephone line, typically ring side. |
| 4 | NC | No connect. Open circuit. No internal connections to the device. |
| 5 | LS | Line switch input. Input logic high turns on the hook switch. Internally pulled low with a high value resistor. |
| 6 | $\overline{\text { DP }}$ | Dial pulse input. Input logic low turns off the hook switch. Used for pulse dialing. Internally pulled high with <br> a high value resistor. |
| 7 | CS | Current sense input. An external resistor connected between CS and TP sets the current limit. |
| 8 | TP | Positive output side of a telephone line. Zener protection to prevent this output from rising above 18 V is <br> required. |

## 8-Lead SOIC (Narrow Body) Package Outline (LG) 4.90x3.90mm body, 1.75 mm height (max), 1.27 mm pitch

Note:

1. This chamfer feature is optional. A Pin 1 identifier must be located in the index area indicated. The Pin 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.
