## NOTES:

1 Dimensions are in inches.
2 Millimeters equivalents are given for general information only.
3 Dimension "A" controls the overall package thickness. When a window lid is used, dimension "A" must increase by a minimum of .010 inch $(0.254 \mathrm{~mm})$ and a maximum of .040 inch $(1.020 \mathrm{~mm})$.
4 The corner shape (square, notch, radius, etc) may vary at the manufacturer's option, from that shown on the drawing.
5 Dimensions "B3" minimum and "L3" minimum and the appropriately castellation length define an unobstructed threedimensional space traversing all of the ceramic layers in which a castellation was designed. (Castellations are required on bottom two layers, optional on top ceramic layer.) Dimension "B3" maximum and "L3" maximum define the maximum width and depth of the castellation at any point on its surface. Measurement of these dimensions may be made prior to solder dipping.
6 In accordance with ASME Y14.5M, diameters are equivalent to $\varphi \mathrm{x}$ symbology.
