

## Rail-to-Rail Input/Output, 10 MHz Op Amps

### Features

- Rail-to-Rail Input/Output
- Wide Bandwidth: 10 MHz (typ.)
- Low Noise: 8.7 nV/√Hz, at 10 kHz (typ.)
- Low Offset Voltage:
  - Industrial Temperature: ±500 μV (max.)
  - Extended Temperature: ±250 μV (max.)
- Mid-Supply  $V_{REF}$ : MCP6021 and MCP6023
- Low Supply Current: 1 mA (typ.)
- Total Harmonic Distortion: 0.00053% (typ., G = 1)
- Unity Gain Stable
- Power Supply Range: 2.5V to 5.5V
- Temperature Range:
  - Industrial: -40°C to +85°C
  - Extended: -40°C to +125°C

### Typical Applications

- Automotive
- Driving A/D Converters
- Multi-Pole Active Filters
- Barcode Scanners
- Audio Processing
- Communications
- DAC Buffer
- Test Equipment
- Medical Instrumentation

### Available Tools

- SPICE Macro Model (at [www.microchip.com](http://www.microchip.com))
- FilterLab<sup>®</sup> software (at [www.microchip.com](http://www.microchip.com))

### Typical Application

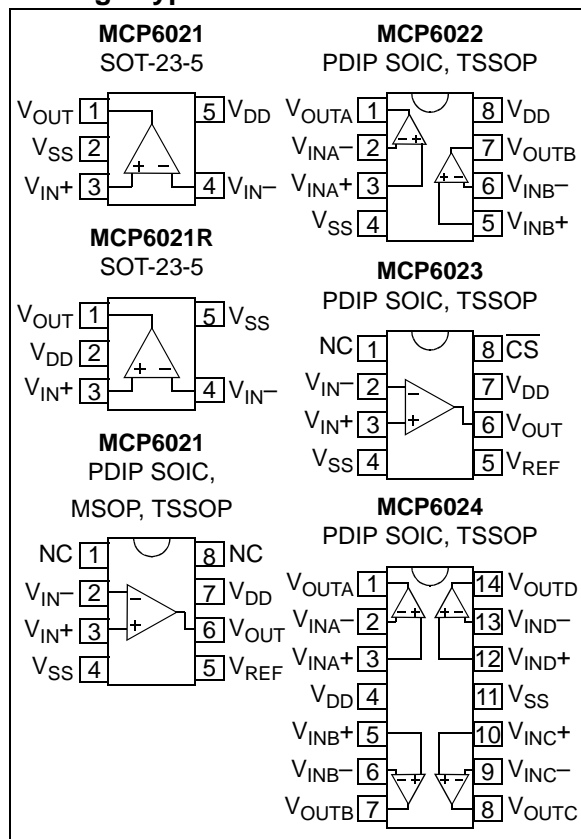

### Description

The MCP6021, MCP6021R, MCP6022, MCP6023 and MCP6024 from Microchip Technology Inc. are rail-to-rail input and output op amps with high performance. Key specifications include: wide bandwidth (10 MHz), low noise (8.7 nV/√Hz), low input offset voltage and low distortion (0.00053% THD+N). The MCP6023 also offers a Chip Select pin ( $\overline{CS}$ ) that gives power savings when the part is not in use.

The single MCP6021 and MCP6021R are available in SOT-23-5. The single MCP6021, single MCP6023 and dual MCP6022 are available in 8-lead PDIP, SOIC and TSSOP. The Extended Temperature single MCP6021 is available in 8-lead MSOP. The quad MCP6024 is offered in 14-lead PDIP, SOIC and TSSOP packages.

The MCP6021/1R/2/3/4 family is available in Industrial and Extended temperature ranges. It has a power supply range of 2.5V to 5.5V.

### Package Types

# MCP6021/1R/2/3/4

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings †

$V_{DD} - V_{SS}$ .....	7.0V
All Inputs and Outputs .....	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$
Difference Input Voltage .....	$ V_{DD} - V_{SS} $
Output Short Circuit Current .....	continuous
Current at Input Pins .....	$\pm 2$ mA
Current at Output and Supply Pins .....	$\pm 30$ mA
Storage Temperature.....	$-65^{\circ}\text{C}$ to $+150^{\circ}\text{C}$
Junction Temperature.....	$+150^{\circ}\text{C}$
ESD Protection on all pins (HBM; MM).....	$\geq 2$ kV; 200V

† **Notice:** Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

### DC ELECTRICAL CHARACTERISTICS

**Electrical Specifications:** Unless otherwise indicated,  $T_A = +25^{\circ}\text{C}$ ,  $V_{DD} = +2.5\text{V}$  to  $+5.5\text{V}$ ,  $V_{SS} = \text{GND}$ ,  $V_{CM} = V_{DD}/2$ ,  $V_{OUT} \approx V_{DD}/2$  and  $R_L = 10$  k $\Omega$  to  $V_{DD}/2$ .

Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>Input Offset</b>						
Input Offset Voltage:						
Industrial Temperature Parts	$V_{OS}$	-500	—	+500	$\mu\text{V}$	$V_{CM} = 0\text{V}$
Extended Temperature Parts	$V_{OS}$	-250	—	+250	$\mu\text{V}$	$V_{CM} = 0\text{V}$ , $V_{DD} = 5.0\text{V}$
Extended Temperature Parts	$V_{OS}$	-2.5	—	+2.5	mV	$V_{CM} = 0\text{V}$ , $V_{DD} = 5.0\text{V}$ $T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$
Input Offset Voltage Temperature Drift	$\Delta V_{OS}/\Delta T_A$	—	$\pm 3.5$	—	$\mu\text{V}/^{\circ}\text{C}$	$T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$
Power Supply Rejection Ratio	PSRR	74	90	—	dB	$V_{CM} = 0\text{V}$
<b>Input Current and Impedance</b>						
Input Bias Current	$I_B$	—	1	—	pA	
Industrial Temperature Parts	$I_B$	—	30	150	pA	$T_A = +85^{\circ}\text{C}$
Extended Temperature Parts	$I_B$	—	640	5,000	pA	$T_A = +125^{\circ}\text{C}$
Input Offset Current	$I_{OS}$	—	$\pm 1$	—	pA	
Common-Mode Input Impedance	$Z_{CM}$	—	$10^{13}  6$	—	$\Omega  \text{pF}$	
Differential Input Impedance	$Z_{DIFF}$	—	$10^{13}  3$	—	$\Omega  \text{pF}$	
<b>Common-Mode</b>						
Common-Mode Input Range	$V_{CMR}$	$V_{SS}-0.3$	—	$V_{DD}+0.3$	V	
Common-Mode Rejection Ratio	CMRR	74	90	—	dB	$V_{DD} = 5\text{V}$ , $V_{CM} = -0.3\text{V}$ to $5.3\text{V}$
	CMRR	70	85	—	dB	$V_{DD} = 5\text{V}$ , $V_{CM} = 3.0\text{V}$ to $5.3\text{V}$
	CMRR	74	90	—	dB	$V_{DD} = 5\text{V}$ , $V_{CM} = -0.3\text{V}$ to $3.0\text{V}$
<b>Voltage Reference (MCP6021 and MCP6023 only)</b>						
$V_{REF}$ Accuracy ( $V_{REF} - V_{DD}/2$ )	$V_{REF\_ACC}$	-50	—	+50	mV	
$V_{REF}$ Temperature Drift	$\Delta V_{REF}/\Delta T_A$	—	$\pm 100$	—	$\mu\text{V}/^{\circ}\text{C}$	$T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$
<b>Open-Loop Gain</b>						
DC Open-Loop Gain (Large Signal)	$A_{OL}$	90	110	—	dB	$V_{CM} = 0\text{V}$ , $V_{OUT} = V_{SS}+0.3\text{V}$ to $V_{DD}-0.3\text{V}$
<b>Output</b>						
Maximum Output Voltage Swing	$V_{OL}$ , $V_{OH}$	$V_{SS}+15$	—	$V_{DD}-20$	mV	0.5V output overdrive
Output Short Circuit Current	$I_{SC}$	—	$\pm 30$	—	mA	$V_{DD} = 2.5\text{V}$
	$I_{SC}$	—	$\pm 22$	—	mA	$V_{DD} = 5.5\text{V}$
<b>Power Supply</b>						
Supply Voltage	$V_S$	2.5	—	5.5	V	
Quiescent Current per Amplifier	$I_Q$	0.5	1.0	1.35	mA	$I_O = 0$

## AC ELECTRICAL CHARACTERISTICS

Electrical Specifications: Unless otherwise indicated, $T_A = +25^\circ\text{C}$ , $V_{DD} = +2.5\text{V}$ to $+5.5\text{V}$ , $V_{SS} = \text{GND}$ , $V_{CM} = V_{DD}/2$ , $V_{OUT} \approx V_{DD}/2$ , $R_L = 10\text{ k}\Omega$ to $V_{DD}/2$ and $C_L = 60\text{ pF}$ .						
Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>AC Response</b>						
Gain Bandwidth Product	GBWP	—	10	—	MHz	
Phase Margin at Unity-Gain	PM	—	65	—	°	$G = +1$
Settling Time, 0.2%	$t_{SETTLE}$	—	250	—	ns	$G = +1$ , $V_{OUT} = 100\text{ mV}_{p-p}$
Slew Rate	SR	—	7.0	—	V/ $\mu\text{s}$

Thermal Resistance, 14L-TSSOP	$\theta_{JA}$	—	100	—	$^{\circ}C/W$	

**Note 1:** The industrial temperature devices operate over this extended temperature range, but with reduced performance. In any case, the internal junction temperature ( $T_J$ ) must not exceed the absolute maximum specification of  $150^{\circ}C$ .

**FIGURE 1-1:** Timing diagram for the  $\overline{CS}$  pin on the MCP6023.

## 2.0 TYPICAL PERFORMANCE CURVES

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

**Note:** Unless otherwise indicated,  $T_A = +25^\circ\text{C}$ ,  $V_{DD} = +2.5\text{V}$  to  $+5.5\text{V}$ ,  $V_{SS} = \text{GND}$ ,  $V_{CM} = V_{DD}/2$ ,  $V_{OUT} \approx V_{DD}/2$ ,  $R_L = 10\text{ k}\Omega$  to  $V_{DD}/2$  and  $C_L = 60\text{ pF}$ .

- Note 1:** The MCP6021 in the 8-pin MSOP package is only available for E-temp (Extended Temperature) parts. The MCP6021 in the 8-pin TSSOP package is only available for I-temp (Industrial Temperature) parts.
- Note 2:** The MCP6021R is only available in the 5-pin SOT-23 package, and for E-temp (Extended Temperature) parts.

### 3.1 Analog Outputs

The op amp output pins are low-impedance voltage sources.

### 3.2 Analog Inputs

The op amp non-inverting and inverting inputs are high-impedance CMOS inputs with low bias currents.

### 3.3 $V_{REF}$ Output (MCP6021 and MCP6023)

Mid-supply reference voltage provided by the single op amps (except in SOT-23-5 package). This is an unbuffered, resistor voltage divider internal to the part.

### 3.4 $\overline{CS}$ Digital Input

This is a CMOS, Schmitt-triggered input that places the part into a low power mode of operation.

### 3.5 Power Supply ( $V_{SS}$ and $V_{DD}$ )

The positive power supply pin ( $V_{DD}$ ) is 2.5V to 5.5V higher than the negative power supply pin ( $V_{SS}$ ). For normal operation, the other pins are at voltages between  $V_{SS}$  and  $V_{DD}$ .

Typically, these parts are used in a single (positive) supply configuration. In this case,  $V_{SS}$  is connected to ground and  $V_{DD}$  is connected to the supply.  $V_{DD}$  will need a local bypass capacitor (typically 0.01  $\mu$ F to 0.1  $\mu$ F) within 2 mm of the  $V_{DD}$  pin. These parts need to use a bulk capacitor (typically 1  $\mu$ F or larger) within 100 mm of the  $V_{DD}$  pin; it can be shared with nearby analog parts.

## 4.0 APPLICATIONS INFORMATION

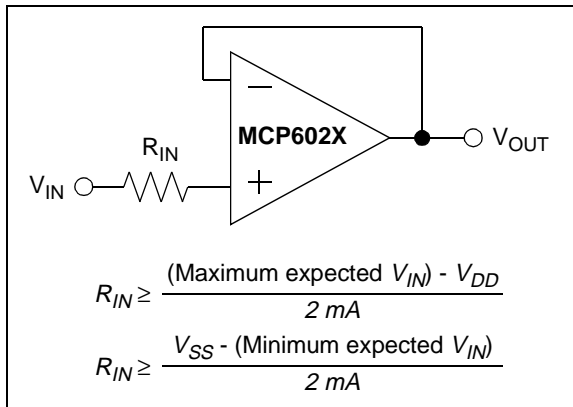

The MCP6021/1R/2/3/4 family of operational amplifiers are fabricated on Microchip's state-of-the-art CMOS process. They are unity-gain stable and suitable for a wide range of general-purpose applications.

### 4.1 Rail-to-Rail Input

The MCP6021/1R/2/3/4 amplifier family is designed to not exhibit phase inversion when the input pins exceed the supply voltages. Figure 2-27 shows an input voltage exceeding both supplies with no resulting phase inversion.

The input stage of the MCP6021/1R/2/3/4 family of devices uses two differential input stages in parallel; one operates at low common-mode input voltage ( $V_{CM}$ ), while the other operates at high  $V_{CM}$ . With this topology, the device operates with  $V_{CM}$  up to 0.3V past either supply rail ( $V_{SS} - 0.3V$  to  $V_{DD} + 0.3V$ ) at +25°C. The amplifier input behaves linearly as long as  $V_{CM}$  is kept within the specified  $V_{CMR}$  limits. The input offset voltage is measured at both  $V_{CM} = V_{SS} - 0.3V$  and  $V_{DD} + 0.3V$  to ensure proper operation.

Input voltages that exceed the input voltage range ( $V_{CMR}$ ) can cause excessive current to flow in or out of the input pins. Current beyond  $\pm 2$  mA introduces possible reliability problems. Thus, applications that exceed this rating must externally limit the input current with an input resistor ( $R_{IN}$ ), as shown in Figure 4-1.

**FIGURE 4-1:**  $R_{IN}$  limits the current flow into an input pin.

Total Harmonic Distortion Plus Noise (THD+N) can be affected by the common mode input voltage ( $V_{CM}$ ). As shown in Figure 2-3 and Figure 2-6, the input offset voltage ( $V_{OS}$ ) is affected by the change from the NMOS to the PMOS input differential pairs. This change in  $V_{OS}$  will increase the distortion if the input voltage includes this transition region. This transition occurs between  $V_{DD} - 1.0V$  and  $V_{DD} - 2.0V$ , depending on  $V_{DD}$  and temperature.

### 4.2 Rail-to-Rail Output

The Maximum Output Voltage Swing is the maximum swing possible under a particular output load. According to the specification table, the output can reach within 20 mV of either supply rail when  $R_L = 10$  k $\Omega$ . See Figure 2-31 and Figure 2-34 for more information concerning typical performance.

### 4.3 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases, and the closed loop bandwidth is reduced. This produces gain-peaking in the frequency response, with overshoot and ringing in the step response.

When driving large capacitive loads with these op amps (e.g., > 60 pF when  $G = +1$ ), a small series resistor at the output ( $R_{ISO}$  in Figure 4-2) improves the feedback loop's phase margin (stability) by making the load resistive at higher frequencies. The bandwidth will be generally lower than the bandwidth with no capacitive load.

**FIGURE 4-2:** Output resistor  $R_{ISO}$  stabilizes large capacitive loads.

Figure 4-3 gives recommended  $R_{ISO}$  values for different capacitive loads and gains. The x-axis is the normalized load capacitance ( $C_L/G_N$ ), where  $G_N$  is the circuit's noise gain. For non-inverting gains,  $G_N$  and the Signal Gain are equal. For inverting gains,  $G_N$  is  $1 + |\text{Signal Gain}|$  (e.g., -1 V/V gives  $G_N = +2$  V/V).

**FIGURE 4-3:** Recommended  $R_{ISO}$  values for capacitive loads.

# MCP6021/1R/2/3/4

After selecting  $R_{ISO}$  for your circuit, double-check the resulting frequency response peaking and step response overshoot. Modify  $R_{ISO}$ 's value until the response is reasonable. Evaluation on the bench and simulations with the MCP6021/1R/2/3/4 Spice macro model are helpful.

## 4.4 Gain Peaking

Figure 2-35 and Figure 2-36 use  $R_F = 1 \text{ k}\Omega$  to avoid (frequency response) gain peaking and (step response) overshoot. The capacitance to ground at the inverting input ( $C_G$ ) is the op amp's common mode input capacitance plus board parasitic capacitance.  $C_G$  is in parallel with  $R_G$ , which causes an increase in gain at high frequencies for non-inverting gains greater than 1 V/V (unity gain).  $C_G$  also reduces the phase margin of the feedback loop for both non-inverting and inverting gains.

**FIGURE 4-4:** Non-inverting gain circuit with parasitic capacitance.

The largest value of  $R_F$  in Figure 4-4 that should be used is a function of noise gain (see  $G_N$  in **Section 4.3 "Capacitive Loads"**) and  $C_G$ . Figure 4-5 shows results for various conditions. Other compensation techniques may be used, but they tend to be more complicated to the design.

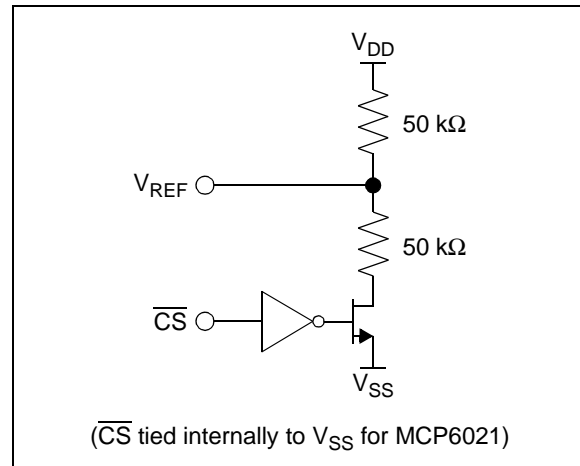

**FIGURE 4-5:** Non-inverting gain circuit with parasitic capacitance.

## 4.5 MCP6023 Chip Select ( $\overline{CS}$ )

The MCP6023 is a single amplifier with chip select ( $\overline{CS}$ ). When  $\overline{CS}$  is high, the supply current is less than 10 nA (typ) and travels from the  $\overline{CS}$  pin to  $V_{SS}$ , with the amplifier output being put into a high-impedance state. When  $\overline{CS}$  is low, the amplifier is enabled. If  $\overline{CS}$  is left floating, the amplifier may not operate properly. Figure 1-1 and Figure 2-39 show the output voltage and supply current response to a  $\overline{CS}$  pulse.

## 4.6 MCP6021 and MCP6023 Reference Voltage

The single op amps (MCP6021 and MCP6023), not in the SOT-23-5 package, have an internal mid-supply reference voltage connected to the  $V_{REF}$  pin (see Figure 4-6). The MCP6021 has  $\overline{CS}$  internally tied to  $V_{SS}$ , which always keeps the op amp on and always provides a mid-supply reference. With the MCP6023, taking the  $\overline{CS}$  pin high conserves power by shutting down both the op amp and the  $V_{REF}$  circuitry. Taking the  $\overline{CS}$  pin low turns on the op amp and  $V_{REF}$  circuitry.

**FIGURE 4-6:** Simplified internal  $V_{REF}$  circuit (MCP6021 and MCP6023 only).

See Figure 4-7 for a non-inverting gain circuit using the internal mid-supply reference. The DC-blocking capacitor ( $C_B$ ) also reduces noise by coupling the op amp input to the source.

**FIGURE 4-7:** Non-inverting gain circuit using  $V_{REF}$  (MCP6021 and MCP6023 only).

To use the internal mid-supply reference for an inverting gain circuit, connect the  $V_{REF}$  pin to the non-inverting input, as shown in Figure 4-8. The capacitor  $C_B$  helps reduce power supply noise on the output.

**FIGURE 4-8:** Inverting gain circuit using  $V_{REF}$  (MCP6021 and MCP6023 only).

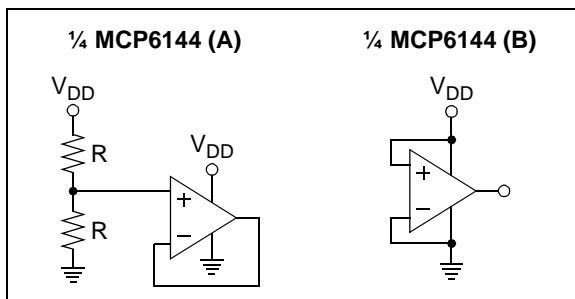

If you don't need the mid-supply reference, leave the  $V_{REF}$  pin open.

## 4.7 Supply Bypass

With this family of operational amplifiers, the power supply pin ( $V_{DD}$  for single supply) should have a local bypass capacitor (i.e., 0.01  $\mu\text{F}$  to 0.1  $\mu\text{F}$ ) within 2 mm for good, high-frequency performance. It also needs a bulk capacitor (i.e., 1  $\mu\text{F}$  or larger) within 100 mm to provide large, slow currents. This bulk capacitor can be shared with nearby analog parts.

## 4.8 Unused Op Amps

An unused op amp in a quad package (MCP6024) should be configured as shown in Figure 4-9. These circuits prevent the output from toggling and causing crosstalk. Circuit A can use any reference voltage between the supplies, provides a buffered DC voltage, and minimizes the supply current draw of the unused op amp. Circuit B uses the minimum number of components and operates as a comparator; it may draw more current.

**FIGURE 4-9:** Unused Op Amps.

## 4.9 PCB Surface Leakage

In applications where low input bias current is critical, PCB (printed circuit board) surface-leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is  $10^{12}\Omega$ . A 5V difference would cause 5 pA of current to flow, which is greater than the MCP6021/1R/2/3/4 family's bias current at +25°C (1 pA, typ).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. Figure 4-10 shows an example of this type of layout.

**FIGURE 4-10:** Example Guard Ring Layout.

1. Non-inverting Gain and Unity-Gain Buffer.
  - a) Connect the guard ring to the inverting input pin ( $V_{IN-}$ ); this biases the guard ring to the common mode input voltage.
  - b) Connect the non-inverting pin ( $V_{IN+}$ ) to the input with a wire that does not touch the PCB surface.
2. Inverting (Figure 4-10) and Transimpedance Gain Amplifiers (convert current to voltage, such as photo detectors).
  - a) Connect the guard ring to the non-inverting input pin ( $V_{IN+}$ ). This biases the guard ring to the same reference voltage as the op amp's input (e.g.,  $V_{DD}/2$  or ground).
  - b) Connect the inverting pin ( $V_{IN-}$ ) to the input with a wire that does not touch the PCB surface.

## 4.10 High Speed PCB Layout

Due to their speed capabilities, a little extra care in the PCB (Printed Circuit Board) layout can make a significant difference in the performance of these op amps. Good PCB layout techniques will help you achieve the performance shown in **Section 1.0 "Electrical Characteristics"** and **Section 2.0 "Typical Performance Curves"**, while also helping you minimize EMC (Electro-Magnetic Compatibility) issues.

Use a solid ground plane and connect the bypass local capacitor(s) to this plane with minimal length traces. This cuts down inductive and capacitive crosstalk.

# MCP6021/1R/2/3/4

Separate digital from analog, low speed from high speed and low power from high power. This will reduce interference.

Keep sensitive traces short and straight. Separating them from interfering components and traces. This is especially important for high-frequency (low rise-time) signals.

Sometimes it helps to place guard traces next to victim traces. They should be on both sides of the victim trace, and as close as possible. Connect the guard trace to ground plane at both ends, and in the middle for long traces.

Use coax cables (or low inductance wiring) to route signal and power to and from the PCB.

## 4.11 Typical Applications

### 4.11.1 A/D CONVERTER DRIVER AND ANTI-ALIASING FILTER

Figure 4-11 shows a third-order Butterworth filter that can be used as an A/D converter driver. It has a bandwidth of 20 kHz and a reasonable step response. It will work well for conversion rates of 80 ksp/s and greater (it has 29 dB attenuation at 60 kHz).

**FIGURE 4-11:** A/D converter driver and anti-aliasing filter with a 20 kHz cutoff frequency.

This filter can easily be adjusted to another bandwidth by multiplying all capacitors by the same factor. Alternatively, the resistors can all be scaled by another common factor to adjust the bandwidth.

### 4.11.2 OPTICAL DETECTOR AMPLIFIER

Figure 4-12 shows the MCP6021 op amp used as a transimpedance amplifier in a photo detector circuit. The photo detector looks like a capacitive current source, so the 100 kΩ resistor gains the input signal to a reasonable level. The 5.6 pF capacitor stabilizes this circuit and produces a flat frequency response with a bandwidth of 370 kHz.

**FIGURE 4-12:** Transimpedance Amplifier for an Optical Detector.

## 5.0 DESIGN TOOLS

Microchip provides the basic design tools needed for the MCP6021/1R/2/3/4 family of op amps.

### 5.1 SPICE Macro Model

The latest SPICE macro model available for the MCP6021/1R/2/3/4 op amps is on Microchip's web site at [www.microchip.com](http://www.microchip.com). This model is intended as an initial design tool that works well in the op amp's linear region of operation at room temperature. Within the macro model file is information on its capabilities.

Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

### 5.2 FilterLab<sup>®</sup> Software

Microchip's FilterLab<sup>®</sup> software is an innovative tool that simplifies analog active filter (using op amps) design. It is available free of charge from our web site at [www.microchip.com](http://www.microchip.com). The FilterLab software tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

## 6.0 PACKAGING INFORMATION

### 6.1 Package Marking Information

5-Lead SOT-23 (MCP6021/MCP6021R)

Device	E-Temp Code
MCP6021	EYNN
MCP6021R	EZNN

**Note:** Applies to 5-Lead SOT-23

Example: (E-temp)

8-Lead PDIP (300 mil)

Example:

OR

8-Lead SOIC (150 mil)

Example:

OR

8-Lead MSOP

Example:

8-Lead TSSOP

Example:

<b>Legend:</b>	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

## Package Marking Information (Continued)

14-Lead PDIP (300 mil) (MCP6024)

Example:

OR

14-Lead SOIC (150 mil) (MCP6024)

Example:

OR

14-Lead TSSOP (MCP6024)

Example:

Mold Draft Angle Top	α	12° REF			12° REF		
Mold Draft Angle Bottom	β	12° REF			12° REF		

\* Controlling Parameter

### Notes:

Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed .005" (0.127mm) per side.

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

See ASME Y14.5M

REF: Reference Dimension, usually without tolerance, for information purposes only.

See ASME Y14.5M

JEDEC Equivalent: MO-153 AB-1

Drawing No. C04-087

Revised: 08-17-05

# MCP6021/1R/2/3/4

---

NOTES:

## APPENDIX A: REVISION HISTORY

### Revision C (March 2006)

The following is the list of modifications:

1. Added SOT-23-5 package option for single op amps MCP6021 and MCP6021R (E-temp only).
2. Added MSOP-8 package option for E-temp single op amp (MCP6021).
3. Corrected package drawing on front page for dual op amp (MCP6022).
4. Clarified spec conditions ( $I_{SC}$ , PM and THD+N) in **Section 2.0 “Typical Performance Curves”**.
5. Added **Section 3.0 “Pin Descriptions”**.
6. Updated **Section 4.0 “Applications information”** for THD+N, unused op amps, and gain peaking discussions.
7. Corrected and updated package marking information in **Section 6.0 “Packaging Information”**.
8. Added **Appendix A: “REVISION HISTORY”**.

### Revision B (November 2003)

- Second Release of this Document

### Revision A (November 2001)

- Original Release of this Document

# MCP6021/1R/2/3/4

---

NOTES:

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>X</u>	<u>/XX</u>	<b>Examples:</b>
Device	Temperature Range	Package	
Device:	MCP6021	Single Op Amp	a) MCP6021T-E/OT: Tape and Reel, Extended temperature, 5LD SOT-23.
	MCP6021T	Single Op Amp (Tape and Reel for SOT-23, SOIC, TSSOP, MSOP)	b) MCP6021-E/P: Extended temperature, 8LD PDIP.
	MCP6021R	Single Op Amp	c) MCP6021-E/SN: Extended temperature, 8LD SOIC.
	MCP6021RT	Single Op Amp (Tape and Reel for SOT-23)	a) MCP6021RT-E/OT: Tape and Reel, Extended temperature, 5LD SOT-23.
	MCP6022	Dual Op Amp	a) MCP6022-I/P: Industrial temperature, 8LD PDIP.
	MCP6022T	Dual Op Amp (Tape and Reel for SOIC and TSSOP)	b) MCP6022-E/P: Extended temperature, 8LD PDIP.
	MCP6023	Single Op Amp w/ $\overline{CS}$	c) MCP6022T-E/ST: Tape and Reel, Extended temperature, 8LD TSSOP.
	MCP6023T	Single Op Amp w/ $\overline{CS}$ (Tape and Reel for SOIC and TSSOP)	a) MCP6023-I/P: Industrial temperature, 8LD PDIP.
	MCP6024	Quad Op Amp	b) MCP6023-E/P: Extended temperature, 8LD PDIP.
	MCP6024T	Quad Op Amp (Tape and Reel for SOIC and TSSOP)	c) MCP6023-E/SN: Extended temperature, 8LD SOIC.
Temperature Range:	I = -40°C to +85°C		a) MCP6024-I/SL: Industrial temperature, 14LD SOIC.
	E = -40°C to +125°C		b) MCP6024-E/SL: Extended temperature, 14LD SOIC.
Package:	OT = Plastic Small Outline Transistor (SOT-23), 5-lead (MCP6021, E-Temp; MCP6021R, E-Temp)		c) MCP6024T-E/ST: Tape and Reel, Extended temperature, 14LD TSSOP.
	MS = Plastic MSOP, 8-lead (MCP6021, E-Temp)		
	P = Plastic DIP (300 mil Body), 8-lead, 14-lead		
	SN = Plastic SOIC (150mil Body), 8-lead		
	SL = Plastic SOIC (150 mil Body), 14-lead		
	ST = Plastic TSSOP, 8-lead (MCP6021, I-Temp; MCP6022, I-Temp, E-Temp; MCP6023, I-Temp, E-Temp;)		
	ST = Plastic TSSOP, 14-lead

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949:2002 ==**

*Microchip received ISO/TS-16949:2002 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona and Mountain View, California in October 2003. The Company's quality system processes and procedures are for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
