## 3.0A, Low Voltage $\mu$ Cap LDO Regulator

---

### Features

- 3A Minimum Output Current
- 500 mV Maximum Dropout Voltage over Temperature
  - Recommended for 3.0V to 2.5V Conversion
  - Recommended for 2.5V to 1.8V, 1.65V, or 1.5V Conversion
- Stable with Ceramic or Tantalum Capacitors
- Wide Input Voltage Range
  - $V_{IN}$ : 2.25V to 6.0V
- +1.0% Initial Output Tolerance
- Fixed and Adjustable Output Voltages:
  - MIC37300: 3-pin S-PAK Fixed Voltages
  - MIC37301: 5-pin S-PAK or 8-pin ePad SOIC Fixed Voltages with Flag
  - MIC37302: 5-pin Adjustable Voltage
  - MIC37303: 8-pin ePad SOIC, DFN Adjustable Voltage with Flag
- Excellent Line and Load Regulation Specifications
- Thermal Shutdown and Current Limit Protection
- Reverse-Leakage Protection
- Low Profile S-PAK Package

### Applications

- LDO Linear Regulator for Low Voltage Digital IC
- PC Add-In Cards
- PowerPC Power Supplies
- High Efficiency Linear Power Supplies
- SMPS Post Regulator
- Multimedia and PC Processor Supplies
- Battery Chargers
- Low Voltage Microcontrollers and Digital Logic

### General Description

The MIC37300/01/02/03 is a 3.0A low-dropout linear voltage regulator that provides a low voltage, high current output with a minimum number of external components. It offers high precision, ultra-low dropout (500 mV over temperature), and low ground current.

The MIC37300/01/02/03 operates from an input of 2.25V to 6.0V. It is designed to drive digital circuits requiring low-voltage at high currents (i.e., PLDs, DSP, microcontroller, etc.). It is available in fixed and adjustable output voltages. Fixed voltages include 1.5V, 1.8V, 2.5V, and 3.3V. The adjustable version is capable of 1.24V to 5.5V.

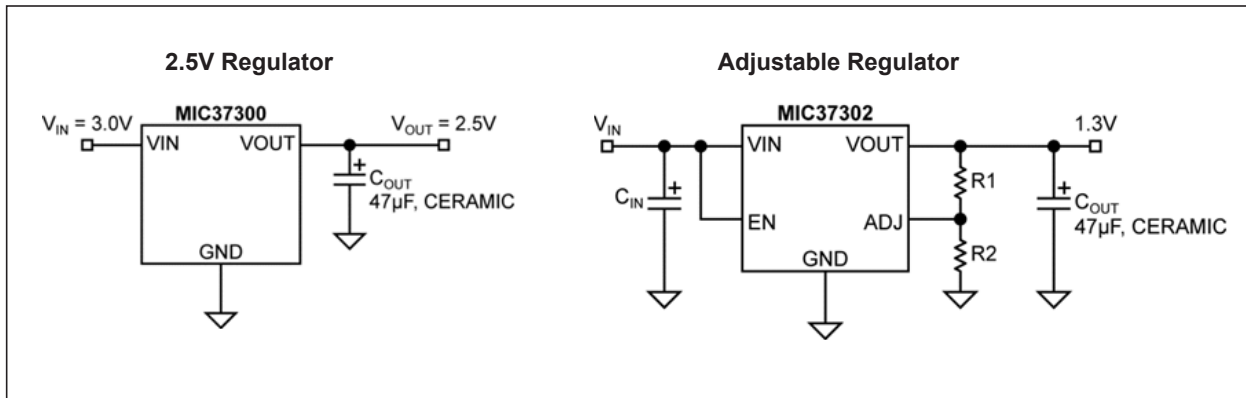

Features of the MIC37300/01/02/03 LDO include thermal and current limit protection, and reverse current protection. Logic enable and error flag pins are available on the 5-pin version.

Junction temperature range of the MIC37300/01/02/03 is from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

For applications requiring input voltage greater than 6.0V, see the MIC3910x, MIC3915x, MIC3930x, and MIC3950x LDOs.

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability. Specifications are for packaged product only.

‡ **Notice:** The device is not guaranteed to function outside its operating ratings.

**Note 1:**  $P_{D(max)} = (T_{J(max)} - T_A) \div \theta_{JA}$ , where  $\theta_{JA}$  depends upon the printed circuit layout. See “Section 4.0 “Application Information” section.

**2:** Devices are ESD sensitive. Handling precautions are recommended.

## 4.0 APPLICATION INFORMATION

The MIC37300/01/02/03 is a high-performance low dropout voltage regulator suitable for moderate to high current regulator applications. The 500 mV dropout voltage at full load and over temperature makes it especially valuable in battery-powered systems and as high-efficiency noise filters in post regulator applications. Unlike older NPN-pass transistor designs, where the minimum dropout voltage is limited by the base-to-emitter voltage drop and collector-to-emitter saturation voltage, dropout performance of the PNP output of these devices is limited only by the low  $V_{CE}$  saturation voltage.

A trade-off for the low dropout voltage is a varying base drive requirement. Microchip's Super  $\beta$  PNP process reduces this drive requirement to only 2% to 5% of the load current.

The MIC37100/01/02 regulator is fully protected from damage due to fault conditions. Linear current limiting is provided. Output current during overload conditions is constant. Thermal shutdown disables the device when the die temperature exceeds the maximum safe operating temperature. The output structure of these regulators allows voltages in excess of the desired output voltage to be applied without reverse current flow.

### 4.1 Thermal Design

Linear regulators are simple to use. The most complicated design parameters to consider are thermal characteristics. Thermal design requires the following application specific parameters:

- Maximum ambient temperature ( $T_A$ )
- Output current ( $I_{OUT}$ )
- Output voltage ( $V_{OUT}$ )
- Input voltage ( $V_{IN}$ )
- Ground current ( $I_{GND}$ )

First, calculate the power dissipation of the regulator and the device parameters from [Electrical Characteristics](#) section or the [Typical Performance Curves](#) section.

#### EQUATION 4-1:

$$P_D = (V_{IN} - V_{OUT})I_{OUT} + V_{IN} \times I_{GND}$$

Then the heat sink thermal resistance is determined with [Equation 4-2](#):

#### EQUATION 4-2:

$$\theta_{SA} = ((T_{J(MAX)} - T_A)/P_D) - (\theta_{JC} + \theta_{CS})$$

Where:

$$T_{J(MAX)} = <125^{\circ}\text{C}$$

$$\theta_{CS} = \text{between } 0^{\circ}\text{C/W and } 2^{\circ}\text{C/W.}$$

The heat sink may be significantly reduced in applications where the minimum input voltage is known and is large compared with the dropout voltage. Use a series input resistor to drop excessive voltage and distribute the heat between this resistor and the regulator. The low dropout properties of Microchip's Super  $\beta$  PNP regulators allow significant reductions in regulator power dissipation and the associated heat sink without compromising performance. When this technique is employed, a capacitor of at least 1.0  $\mu\text{F}$  is needed directly between the input and regulator ground.

### 4.2 Output Capacitor

The MIC37300/01/02/03 requires an output capacitor for stable operation. As a  $\mu\text{Cap}$  LDO, the MIC37300/01/02/03 can operate with ceramic output capacitors as long as the amount of capacitance is 47  $\mu\text{F}$  or greater. For values of output capacitance lower than 47  $\mu\text{F}$ , the recommended ESR range is 200 m $\Omega$  to 2 $\Omega$ . The minimum value of output capacitance recommended for the MIC37300 is 10  $\mu\text{F}$ .

For 47  $\mu\text{F}$  or greater, the ESR range recommended is less than 1 $\Omega$ . Ultra-low ESR, ceramic capacitors are recommended for output capacitance of 47  $\mu\text{F}$  or greater to help improve transient response and noise reduction at high frequency. X7R/X5R dielectric-type ceramic capacitors are recommended because of their temperature performance. X7R-type capacitors change capacitance by 15% over their operating temperature range and are the most stable type of ceramic capacitors. Z5U and Y5V dielectric capacitors change value by as much as 50% and 60%, respectively, over their operating temperature ranges. To use a ceramic chip capacitor with Y5V dielectric, the value must be much higher than an X7R ceramic capacitor to ensure the same minimum capacitance over the equivalent operating temperature range.

# MIC37300/01/02/03

## 4.3 Input Capacitor

An input capacitor of 1.0  $\mu\text{F}$  or greater is recommended when the device is more than 4 inches away from the bulk supply capacitance, or when the supply is a battery. Small, surface-mount chip capacitors can be used for the bypassing. The capacitor should be placed within 1 inch of the device for optimal performance. Larger values will help to improve ripple rejection by bypassing the input to the regulator, further improving the integrity of the output voltage.

## 4.4 Transient Response and 3.3V to 2.5V or 2.5V to 1.8V, 1.65V, or 1.5V Conversions

The MIC37300/01/02/03 has excellent transient response to variations in input voltage and load current. The device has been designed to respond quickly to load current variations and input voltage variations. Large output capacitors are not required to obtain this performance. A standard 47  $\mu\text{F}$  output capacitor, is all that is required. Larger values help to improve performance even further.

By virtue of its low dropout voltage, this device does not saturate into dropout as readily as similar NPN-based designs. When converting from 3.3V to 2.5V or 2.5V to 1.8V, or lower, the NPN based regulators are already operating in dropout, with typical dropout requirements of 1.2V or greater. To convert down to 2.5V or 1.8V without operating in dropout, NPN-based regulators require an input voltage of 3.7V at the very least. The MIC37100 regulator will provide excellent performance with an input as low as 3.0V or 2.25V respectively. This gives the PNP based regulators a distinct advantage over older, NPN based linear regulators.

## 4.5 Minimum Load Current

The MIC37300/01/02/03 regulator is specified between finite loads. If the output current is too small, then the leakage currents dominate and the output voltage rises. A 10 mA minimum load current is necessary for proper operation. For adjustable regulators, this can be accomplished by selecting the feedback resistors to load the output with 10 mA.

## 4.6 Error Flag

The MIC37301 and MIC37303 feature an error flag circuit that monitors the output voltage and signals an error condition when the voltage is 5% below the nominal output voltage. The error flag is an open collector output that can sink 10 mA during a fault condition.

Low output voltage can be caused by a number of problems, including an overcurrent fault (device in current limit) or low input voltage. The flag is inoperative during overtemperature shutdown.

## 4.7 Enable Input

The MIC37301/02/03 also features an enable input for on/off control of the device. Its shutdown state draws “zero” current (only microamperes of leakage). The enable input is TTL/CMOS compatible for simple logic interface, but can be connected up to  $V_{\text{IN}}$ . When enabled, it draws approximately 15  $\mu\text{A}$ .

## 4.8 Adjustable Regulator Design

**FIGURE 4-1:** Adjustable Regulator with Resistors.

The MIC37302 and MIC37303 allow programming the output voltage anywhere between 1.24V and the 5.5V maximum operating rating of the family. Two resistors are used. Resistors can be quite large, up to 1 M $\Omega$ , because of the very high input impedance and low bias current of the sense comparator. The resistor values are calculated by:

### EQUATION 4-3:

$$R1 = R2 \left( \frac{V_{\text{OUT}}}{1.240} - 1 \right)$$

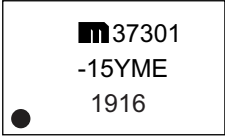

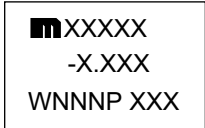

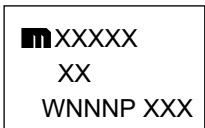

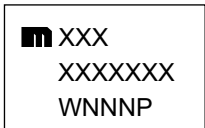

Where:

$V_{\text{OUT}}$  = The desired output voltage.

Figure 4-1 shows the component definition. Applications with widely varying load currents may scale the resistors to draw the minimum load current required for proper operation.

### Examples:

- a) MIC37300-1.5WR: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, 1.5 Fixed Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, 3-Lead S-PAK, 48/Tube
- b) MIC37300-1.8WR-TR: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, 1.5 Fixed Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, 3-Lead S-PAK, 750/Reel
- c) MIC37301-1.65YM: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, 1.65 Fixed Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, SOIC-8, 95/Tube
- d) MIC37301-1.65YM-TR: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, 1.65 Fixed Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, DFN, 2,500/Reel
- e) MIC37302WU: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, ADJ. Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, TO-263-5, 50/Tube
- f) MIC37302WU-TR: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, ADJ. Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, TO-263-5, 750/Reel
- g) MIC37303YM: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, ADJ. Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, SOIC-8, 95/Tube
- h) MIC37303YM-T5: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, ADJ. Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, DFN, 500/Reel
- h) MIC37303YM-TR: 3.0A Low-Voltage  $\mu$ Cap LDO Regulator, ADJ. Output Voltage option, -40°C to +125°C Junction Temperature Range, RoHs Compliant, SOIC-8, 2, 500/Reel

**Note 1:** Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoq® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
