

PIC18-Q84 Family Product Brief

Introduction

The PIC18-Q84 microcontroller family is available in 28/40/44/48-pin devices for many automotive and industrial applications. The many communication peripherals found on the product family, such as CAN, SPI, I²C, two UARTs, can handle a wide range of wired and wireless (using external modules) communication protocols for intelligent applications. This, combined with the Core Independent Peripherals integration capabilities, enable functions for motor control, power supply, sensor, signal and user interface applications. Additionally, this family includes a 12-bit ADC with Computation and Context Switching extensions for automated signal analysis to reduce the complexity of the application.

PIC18-Q84 Family Types

Table 1. Devices Included in This Data Sheet

Device	Program Memory Flash (bytes)	Data SRAM (bytes)	Data EEPROM (bytes)	Memory Access Partition/ Device Information Area	I/O Pins/ Peripheral Pin Select	8-Bit Timer with HLT/ 16-Bit Timers	16-Bit Dual PWM/ CCP	Complementary Waveform Generator	Signal Measurement Timer	16-Bit Universal Timer	Numerically Controlled Oscillator	Configurable Logic Cell	12-Bit ADC w/Computation and Context Switching (channels)	8-Bit DAC	Comparator/ Zero-Cross Detect	High-Low Voltage Detect	CAN FD	SPI/I ² C	UART/ UART with Protocol Support	Direct Memory Access (DMA)	Windowed Watchdog Timer	32-Bit GRC with Scanner	Vectorized Interrupts	Peripheral Module Disable	Temperature Indicator

Features

- C Compiler Optimized RISC Architecture
- Operating Speed:
 - DC – 64 MHz clock input
 - 62.5 ns minimum instruction cycle
- Eight Direct Memory Access (DMA) Controllers:

- Data transfers to SFR/GPR spaces from either Program Flash Memory, Data EEPROM or SFR/GPR spaces
- User programmable source and destination sizes
- Hardware and software triggered data transfers
- Vectored Interrupt Capability:
 - Selectable high/low priority
 - Fixed interrupt latency of three instruction cycles
 - Programmable vector table base address
 - Backwards compatible with previous interrupt capabilities
- 128-Level Deep Hardware Stack
- Low-Current Power-on Reset (POR)
- Configurable Power-up Timer (PWRT)
- Brown-out Reset (BOR)
- Low-Power BOR (LPBOR) Option
- Windowed Watchdog Timer (WWDT):
 - Watchdog Reset on too long or too short interval between watchdog clear events
 - Variable prescaler selection
 - Variable window size selection

Memory

- Up to 128 KB of Program Flash Memory
- Up to 13 KB of Data SRAM Memory
- 1024 Bytes Data EEPROM
- Memory Access Partition: The Program Flash Memory can be partitioned into:
 - Application Block
 - Boot Block
 - Storage Area Flash (SAF) Block
- Programmable Code Protection and Write Protection
- Device Information Area (DIA) Stores:
 - Temperature indicator factory calibrated data
 - Fixed Voltage Reference measurement data
 - Microchip unique identifier
- Device Characteristics Information (DCI) Area Stores:
 - Program/erase row sizes
 - Pin count details
 - EEPROM size
- Direct, Indirect and Relative Addressing modes

Operating Characteristics

- Operating Voltage Range:
 - 1.8V to 5.5V
- Temperature Range:
 - Industrial: -40°C to 85°C
 - Extended: -40°C to 125°C

Power-Saving Functionality

- Doze: CPU and Peripherals Running at Different Cycle Rates (typically CPU is lower)
- Idle: CPU Halted While Peripherals Operate
- Sleep: Lowest Power Consumption
- Peripheral Module Disable (PMD):
 - Ability to selectively disable hardware module to minimize active power consumption of unused peripherals
- Low-Power Mode Features:
 - Sleep: < 1µA typical @ 3V
 - Operating Current:
 - 48µA @ 32 kHz, 3V, typical

Digital Peripherals

- Four 16-Bit Pulse-Width Modulators (PWM):
 - Dual outputs for each PWM module
 - Integrated 16-bit timer/counter
 - Double-buffered user registers for duty cycles
 - Right/Left/Center/Variable aligned modes of operation
 - Multiple clock and Reset signal selections
- Three 16-Bit Timers (TMR0/1/3)
- Three 8-Bit Timers (TMR2/4/6) with Hardware Limit Timer (HLT)
- Two Universal Timers (TMRU16A/16B):
 - New Timer modules with features of TMR0/TMR1/TMR2 (Gate, Hardware Limit)
 - Two 16-bit timers can be chained together to create a combined 32-bit timer
- Eight Configurable Logic Cell (CLC):
 - Integrated combinational and sequential logic
- Three Complementary Waveform Generators (CWG):
 - Rising and falling edge dead-band control
 - Full-bridge, half-bridge, 1-channel drive
 - Multiple signal sources
 - Programmable dead band
 - Fault-shutdown input
- Three Capture/Compare/PWM (CCP) modules:
 - 16-bit resolution for Capture/Compare modes
 - 10-bit resolution for PWM mode
- Three Numerically Controlled Oscillators (NCO):
 - Generates true linear frequency control and increased frequency resolution
 - Input clock up to 64 MHz
- Signal Measurement Timer (SMT):
 - 24-bit timer/counter with prescaler
 - Several modes of operation like Time-of-Flight, Period and Duty Cycle measurement, etc.
- Data Signal Modulator (DSM):
 - Multiplex two carrier clocks, with glitch prevention feature
 - Multiple sources for each carrier
- Programmable CRC with Memory Scan:
 - Reliable data/program memory monitoring for Fail-Safe operation (e.g., Class B)
 - Calculate 16-bit CRC over any portion of Program Flash Memory
- CAN Flexible Data-Rate (FD) module:

- Functional in CAN FD or CAN 2.0B modes
- One dedicated transmit FIFO
- Three Programmable Transmit/Receive FIFOs
- One Transmit Event Queue
- 12 Acceptance Masks/Filters
- Calculate 16-bit CRC over any portion of Program Flash Memory
- Five UART modules:
 - LIN master and slave, DMX mode, DALI gear and device protocols
 - Asynchronous UART, RS-232, RS-485 compatible
 - Automatic and user timed BREAK period generation
 - Automatic checksums
 - Programmable 1, 1.5, and two Stop bits
 - Wake-up on BREAK reception
 - DMA compatible
- Two SPI modules:
 - Configurable length bytes
 - Arbitrary length data packets
 - Transmit-without-receive and receive-without-transmit options
 - Transfer byte counter
 - Separate transmit and receive buffers with 2-byte FIFO and DMA capabilities
- One I²C module, SMBus, PMBus™ Compatible:
 - 7-bit and 10-bit addressing modes with address masking modes
 - Dedicated address, transmit and receive buffers and DMA capabilities
 - Bus collision detection with arbitration
 - Bus time-out detection and handling
 - I²C, SMBus 2.0 and SMBus 3.0, and 1.8V input level selections
 - Multi-Master mode, including self-addressing
- Device I/O Port Features:
 - 25 I/O pins (PIC18F26/27Q84)
 - 36 I/O pins (PIC18F46/47Q84)
 - 44 I/O pins (PIC18F56/57Q84)
 - Individually programmable I/O direction, open-drain, slew rate and weak pull-up control
 - Interrupt-on-change on most pins
 - Three programmable external interrupt pins
- Peripheral Pin Select (PPS):
 - Enables pin mapping of digital I/O

Analog Peripherals

- Analog-to-Digital Converter with Computation and Context Saving:
 - Up to 43 external channels
 - Automated math functions on input signals:
 - Averaging, filter calculations, oversampling and threshold comparison
 - 4 Separate Contexts (settings and results) saved and accessible separately
 - Contexts can be accessed through firmware or DMA
 - Operates in Sleep
 - Five internal analog channels
 - Hardware Capacitive Voltage Divider (CVD) Support:
 - Adjustable sample and hold capacitor array

- Guard ring digital output drive
- Automates touch sampling and reduces software size and CPU usage when touch or proximity sensing is required
- 8-Bit Digital-to-Analog Converter (DAC):
 - Buffered output available on two I/O pins
 - Internal connections to ADC and Comparators
- Two Comparators (CMP):
 - Four external inputs
 - Configurable output polarity
 - External output via Peripheral Pin Select
- Zero-Cross Detect (ZCD):
 - Detect when AC signal on pin crosses ground
- Voltage Reference:
 - Fixed Voltage Reference with 1.024V, 2.048V and 4.096V output levels
 - Internal connections to ADC, Comparator and DAC

Clocking Structure

- High-Precision Internal Oscillator Block (HFINTOSC):
 - Selectable frequencies up to 64 MHz
 - $\pm 1\%$ at calibration
 - Active Clock Tuning of HFINTOSC for better accuracy
- 32 kHz Low-Power Internal Oscillator (LFINTOSC)
- External 32 kHz Crystal Oscillator (SOSC)
- External High-frequency Oscillator Block:
 - Three crystal/resonator modes
 - Digital Clock Input mode
 - 4x PLL with external sources
- Fail-Safe Clock Monitor:
 - Allows for operational recovery if external clock stops
- Oscillator Start-up Timer (OST):
 - Ensures stability of crystal oscillator sources

Programming/Debug Features

- In-Circuit Serial Programming™ (ICSP™) via Two Pins
- In-Circuit Debug (ICD) with Three Breakpoints via Two Pins
- Debug Integrated On-Chip

Note:

- This is a PPS remappable input signal. The input function may be moved from the default location shown to one of several other PORTx pins. Refer to the peripheral input selection table for details on which PORT pin can be mapped to this signal.
- All output signals shown in this row are PPS remappable. These signals may be mapped to output onto one of several PORTx pin options as described in the peripheral output selection table.
- This is a bidirectional signal. For normal module operation, the firmware should map this signal to the same pin in both the PPS input and PPS output registers.
- These pins are configured for I²C logic levels; The SCLx/SDAx signals may be assigned to any of these pins. PPS assignments to the other pins (e.g., RB1) will operate, but input logic levels will be standard TTL/STL levels. The I²C specific or SMBus input buffer thresholds.
- A 0.1 uF bypass capacitor to V_{SS} is required on the V_{DD} pin.

Note:

1. This is a PPS remappable input signal. The input function may be moved from the default location shown to one of several other PORTx pins. Refer to the peripheral input selection table for the pin numbers that can be used for this signal.
2. All output signals shown in this row are PPS remappable. These signals may be mapped to output onto one of several PORTx pin options as described in the peripheral output selection table.
3. This is a bidirectional signal. For normal module operation, the firmware should map this signal to the same pin in both the PPS input and PPS output registers.
4. These pins are configured for I²C logic levels; The SCLx/SDAx signals may be assigned to any of these pins. PPS assignments to the other pins (e.g., RB1) will operate, but input logic selected by the INLVL register, instead of the I²C specific or SMBus input buffer thresholds.
5. A 0.1 uF bypass capacitor to VSS is required on all VDD pins.

The Microchip Website

Microchip provides online support via our website at <http://www.microchip.com/>. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to <http://www.microchip.com/pcn> and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: <http://www.microchip.com/support>

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Legal Notice

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, HELDO, IGLOO, JukeBloX, KeeLoq, Kleer, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PackeTime, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TempTrackr, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, FlashTec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet-Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, Vite, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, EtherGREEN, In-Circuit Serial Programming, ICSP, INICnet, Inter-Chip Connectivity, JitterBlocker, KleerNet, KleerNet logo, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, SAM-ICE, Serial Quad I/O, SMART-I.S., SQL, SuperSwitcher, SuperSwitcher II, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, and Symmcom are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.
