DESCRIPTION

The PL500-37 is a low cost, high performance and low phase noise VCXO for the 36 to 130MHz range, providing less than -148dBc at 10kHz offset at 77.76MHz. The very low jitter (2.5 ps RMS period jitter) makes this chip ideal for applications requiring voltage controlled frequency sources. The input crystal frequency can range from 36 to 130MHz (fundamental resonant mode).

Note: The crystal must be such that it oscillates (parallel resonant) at nominal frequency when presented a C Load as specified above. If the crystal requires more load to be at nominal frequency, the additional load must be added externally. This however may reduce the pull range. Note that the Cload values above are for the IC only, and do not include PCB parasitics. Crystal specifications for Cload include PCB parasitics.
