## General Description

The SY55854U is a fully differential, CML, $2 \times 2$-crosspoint switch. The non-blocking design allows any input to be connected to any output. Varying the state of the select inputs allows SY55854U to be used in backup, fault tolerant, protection, and backplane distribution applications.
SY55854U inputs can be terminated with a single resistor between the true and the complement pins of a given input.
The SY55854U is a member of Micrel's new SuperLite ${ }^{\circledR}$ family of high-speed logic devices. This family features very small packaging, high signal integrity, and flexible supply voltage operation.
Datasheets and support documentation can be found on Micrel's web site at: www.micrel.com.

## Functional Block Diagram

SuperLite ${ }^{\circledR}$

## Features

- Guaranteed $\mathrm{f}_{\text {MAX }}>2.5 \mathrm{GHz}$ over temperature
- 2.3 V to 5.7 V power supply
- Non-blocking "switch architecture"
- Guaranteed <15ps channel-to-channel skew
- Guaranteed $<480$ ps propagation delay over temperature
- Configurable as 2:1 mux, 1:2 fan-out buffer, dual buffer, or $2 \times 2$ switch
- Accepts CML, PECL, LVPECL inputs
- Fully differential inputs/outputs
- Source terminated CML outputs for fast edge rates
- Wide operating temperature range: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Available in a tiny 16 -pin EPAD-QSOP package

## Applications

- High-speed logic
- Data communications systems
- Wireless communications systems
- Telecom systems
- Backplane redundancy

SuperLite is a registered trademark of Micrel, Inc.

## Ordering Information ${ }^{(1)}$

| Part Number | Package <br> Type | Temperature <br> Range | Package | Lead <br> Finish |
| :--- | :---: | :---: | :---: | :---: |
| SY55854UYI | Y16-1 | Industrial | 854 U | Sn-Pb |
| SY55854UYITR(2) | Y16-1 | Industrial | 854 U | Sn-Pb |
| SY55854UYY(3) | Y16-1 | Industrial | 854 U with <br> Pb-Free bar-line indicator | Matte-Sn <br> Pb-Free |
| SY55854UYYTR(2,3) | Y16-1 | Industrial | $854 U$ with <br> Pb-Free bar-line indicator | Matte-Sn <br> Pb-Free |

## Notes:

1. Contact factory for die availability. Dice are guaranteed at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{DC}$ Electricals only.
2. Tape and Reel.
3. Pb-Free package recommended for new designs.

## Pin Configuration

16-Pin EPAD-QSOP (Y16-1)

## Pin Description

| Pin Number | Pin Name | Pin Function |
| :---: | :---: | :--- |
| 2,3 | D0, /D0 | CML/PECL/LVPECL Input (Differential). This is one of the data inputs to the crosspoint. <br> It will be switched either to the Q0 output, the Q1 output, both outputs, or neither output, <br> depending on the state of the S0 and S1 inputs. |
| 4,5 | S0, /S0 | CML/PECL/LVPECL Input (Differential). This selects input chooses which data input <br> switches to the Q0 output. S0 logic low selects the D0 input, while S0 logic high selects <br> the B input. |
| 6,7 | /D1, D1 | CML/PECL/LVPECL Input (Differential). This is the other data input to the crosspoint. It <br> will be switched either to the Q0 output, the Q1 output, both outputs, or neither output, <br> depending on the state of the S0 and S1 inputs. |
| 1,8 | GND | Ground. |
| 9,16 | VCC | Power Supply. |
| 10,11 | Q1, /Q1 | CML Output (Differential). This is the other output from the crosspoint. Input S1 selects <br> either the D0 or D1 input to be switched to this output. |
| 12,13 | /S1, S1 | CML/PECL/LVPECL Input (Differential). This select input chooses which data input <br> switches to the Q1 output. S1 logic low selects the D0 input, while S1 logic high selects <br> the D1 input. |
| 14,15 | /Q0, Q0 | CML Output (Differential). This is one output from the crosspoint. Input S0 selects either <br> the D0 or the D1 input to be switched to this output. |

## Functional Description

## Establishing Static Logic Inputs

The true pin of an input pair is internally biased to ground through a $75 \mathrm{k} \Omega$ resistor. The complement pin of an input pair is internally biased halfway between $\mathrm{V}_{\mathrm{cc}}$ and ground by a voltage divider consisting of two $75 \mathrm{k} \Omega$ resistors. In this way, unconnected inputs appear as logic zeros. To keep an input at static logic zero at $\mathrm{V}_{\mathrm{Cc}}>3.0 \mathrm{~V}$, leave both inputs unconnected. For $\mathrm{V}_{\mathrm{CC}} \leq 3.0 \mathrm{~V}$, connect the complement input to $\mathrm{V}_{\mathrm{Cc}}$ and leave the true input unconnected. To make an input static logic one, connect the true input to $\mathrm{V}_{\mathrm{cc}}$, and leave the complement input unconnected. These are the only two safe ways to cause inputs to be at a static value. In particular, no input pin should be directly connected to ground. All NC (no connect) pins should be unconnected.

Figure 1. Hard Wiring a Logic " 1 " (1)

## Note:

1. $X$ is either $D 0, D 1, S 0$, or $S 1$ input. / $X$ is either /D0, /D1, /S0, or /S1 input.

Figure 2. Hard Wiring a Logic " 0 " (1)

## Usage

SY55854U is very versatile. Tying its select inputs in various ways varies its functionality. For example, tying the select inputs together turns SY55854U into a redundant distributor. Either input will be switched to both outputs simultaneously. This is very useful in redundant backplane applications. By cross-tying the select inputs, SY55854U becomes a true crosspoint, selecting between "straight through" and "cross connected" operation. Also, using the select inputs independently, SY55854U functions as two multiplexers. Setting the select inputs to static values turns SY55854U into a dual buffer, or a fan-out buffer.
To make larger crosspoints, cascade SY55854U devices, either in a tree, or in a Banyan structure, as appropriate for your application.

## Truth Table

| S0 | S1 | Q0 | Q1 | Function |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | D0 | D0 | Fan-Out Buffer |
| 0 | 1 | D0 | D1 | Dual Buffer |
| 1 | 0 | D1 | D0 | Dual Buffer |
| 1 | 1 | D1 | D1 | Fan-Out Buffer |
| CTL | CTL | Same | Same | Redundant Distribution |
| CTL | ICTL | Opposite | Opposite | Crosspoint |

Absolute Maximum Ratings ${ }^{(1)}$
Supply Voltage ( $\mathrm{V}_{\mathrm{cc}}$ ) $\qquad$ .-0.5 to +6.0 V

## Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The device is not guaranteed to function outside its operating rating.
3. Equilibrium temperature.
4. Actual voltage levels and differential swing will depend on customer termination scheme. Typically, a 400 mV swing is available in the $100 \Omega$ environment and a 200 mV swing in the $50 \Omega$ environment. Refer to the "CML Termination" diagram for more details
5. See Figure 4.
6. See Figure 3a and 3b.

## AC Electrical Characteristics ${ }^{(8,9)}$

$\mathrm{V}_{\mathrm{CC}}=2.3 \mathrm{~V}$ to 5.7 V ; $\mathrm{GND}=0 \mathrm{~V} ; \mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$

| Symbol | Parameter | Condition | Min | Typ | Max | Units |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| $\mathrm{f}_{\text {MAX }}$ | Max. Operating Frequency |  | 2.5 |  |  |  |
| $\mathrm{t}_{\text {PD }}$ | Propagation Delay, <br> S0, S1, D0, D1 to Q0, Q1 |  |  |  | 400 |  |
| $\mathrm{t}_{\text {SKEW }}$ | Within-Device Skew( 9 (9) <br> Part-to-Part Skew (Diff.) |  |  | mA |  |  |
| $\mathrm{t}_{\mathrm{r},} \mathrm{t}_{\mathrm{f}}$ | CML Output Rise/Fall Times <br> $(20 \%$ to 80\%) |  |  | 15 | ps |  |

## Notes:

8. Tested using environment of Figure $3 \mathrm{~b}, 50 \Omega$ load CML output.
9. Worst case difference between Q0 and Q1 from either $A$ or $B$, when both outputs come from the same input.

## CML Termination

All inputs accept the output from any other member of this family. All outputs are source terminated $100 \Omega$ CML differential drivers as shown in Figures 3 and 4. SY55854U expects the inputs to be terminated, and that good high speed design practices be adhered to. SY55854U inputs are designed to accept a termination resistor between the true and complement inputs of a differential pair. 0402 form factor chip resistors will fit with some trace fanout.

## Package Information

NDTE:

1) ALL DIMENSIONS ARE IN INCHES [MM],
2) PACKAGE LENGTH DOES NDT INCLUDE

MILD FLASH, PRDTRUSIUNS IR GATE BURR.
3) PACKAGE WIDTH DOES NDT INCLUDE

INTERLEAD FLASH GR PRDTRUSIDNS.
