

SY56016R

Low Voltage 1.2V/1.8V/2.5V CML Differential Line Driver/Receiver 6.4Gbps with Equalization

Precision Edge[®]

General Description

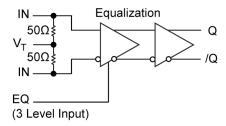

The SY56016R is a fully differential, low voltage 1.2V/1.8V/2.5V CML Line Driver/Receiver with input equalization. The SY56016R can process clock signals as fast as 5.0GHz or data patterns up to 6.4Gbps.

The differential input includes Micrel's unique, 3-pin input termination architecture that interfaces to CML differential signals, without any level-shifting or termination resistor networks in the signal path. The differential input can also accept AC-coupled CML, LVPECL, and LVDS signals. Input voltages as small as 200mV (400mV_{PP}) are applied before the 9", 18" or 27" FR4 transmission line. For AC-coupled input interface applications, an internal voltage reference is provided to bias the $V_{\rm T}$ pin. The outputs are CML, with extremely fast rise/fall times guaranteed to be less than 80ps.

The SY56016R operates from a 2.5V $\pm 5\%$ core supply and a 1.2V, 1.8V or 2.5V $\pm 5\%$ output supply and is guaranteed over the full industrial temperature range (-40° C to $+85^{\circ}$ C). The SY56016R is part of Micrel's high-speed, Precision Edge® product line.

Datasheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Functional Block Diagram

Features

- 1.2V/1.8V/2.5V CML Differential Line Driver/Receiver with Equalization
- Equalizes 9, 18, 27 inches of FR4
- Guaranteed AC performance over temperature and voltage:
 - DC-to >6.4Gbps Data throughput
 - DC-to >5.0GHz Clock throughput
 - <250ps propagation delay (IN-to-Q)</p>
 - <80ps rise/fall times
- · Ultra-low jitter design
 - <1ps_{RMS} random jitter
- High-speed CML outputs
- 2.5V \pm 5% V_{CC}, 1.2V/1.8V/2.5V \pm 5% V_{CCO} power supply operation
- Industrial temperature range: -40°C to +85°C
- Available in 10-pin (2mm x 2mm) MLF[®] package

Applications

- Data Distribution:
- · SONET clock and data distribution
- Fibre Channel clock and data distribution
- · Gigabit Ethernet clock and data distribution

Markets

- Storage
- · Test and measurement
- Enterprise networking equipment
- High-end servers
- Metro area network equipment

Ordering Information

| Part Number | Package Type | Operating Range | Package Marking | Lead Finish |
|-----------------------------|-----------------|--------------------|--------------------------------------|-------------------|
| SY56016RMG | MLF-10 | Industrial | R016 with Pb-Free bar-line indicator | NiPdAu Pb-Free |
| SY56016RMGTR ⁽²⁾ | MLF-10 | Industrial | R016 with Pb-Free bar-line indicator | NiPdAu Pb-Free |

Note

- 1. Contact factory for die availability. Dice are guaranteed at T_A = 25°C, DC Electricals only.
- 2. Tape and Reel.

Pin Configuration

10-Pin MLF[®] (MLF-10)

Truth Table

| EQ | Equalization |
|-------|--------------|
| LOW | 9" |
| FLOAT | 18" |
| HIGH | 27" |

Pin Description

| Pin Number | Pin Name | Pin Function |
|------------|-------------|--|
| 2, 3 | IN, /IN | Differential Input: Signals as small as 200mV V_{PK} (400mV _{PP}) can be applied to the input of 9, 18 or 27 inches 6 mil FR4 stripline transmission line. They are then terminated at the differential input internally with 50 Ω to the VT pin. |
| 1 | VT | Input Termination Center-Tap: Each side of the differential input pair terminates to VT pin. This pin provides a center-tap to a termination network for maximum interface flexibility. An internal high impedance resistor divider biases VT to allow input AC coupling. For AC coupling, bypass VT with 0.1µF low ESR capacitor to VCC. See "Interface Applications" subsection and Figure 2a. |
| 4 | EQ | Three level input for equalization control. High, float, low. |
| 10 | VCC | Positive Power Supply: Bypass with $0.1\mu F//0.01\mu F$ low ESR capacitors as close to the V_{CC} pin as possible. Supplies input and core circuitry. |
| 6, 9 | VCCO | Output Supply: Bypass with $0.1\mu F//0.01\mu F$ low ESR capacitors as close to the V_{CCO} pins as possible. Supplies the output buffer. |
| 5 | GND, | Ground: Exposed pad must be connected to a ground plane that is the same potential as |
| | Exposed pad | the ground pin. |
| 8, 7 | Q0, /Q0 | CML Differential Output Pair: Differential buffered copy of the input signal. The output swing is typically 390mV. See "Interface Applications" sub-section for termination information. |

| V _{T_IN} | Voltage from Input to V _T | | | | 1.28 | V |

Notes:

- 1. Exceeding the absolute maximum rating may damage the device.
- 2. The device is not guaranteed to function outside its operating rating.
- 3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB. ψ_{JB} and θ_{JA} values are determined for a 4-layer board in still-air number, unless otherwise stated.
- The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
- 1.7V represents the V_{CC} (min) value and 0.475V represents the maximum swing on a CML output. The difference between 1.7V and 0.475V is the V_{IL} (min) needed for normal operation.

CML Outputs DC Electrical Characteristics⁽⁶⁾

 V_{CCO} = 1.14V to 1.26V R_{L} = 50 Ω to V_{CCO}

 V_{CCO} = 1.7V to 1.9V, 2.375V to 2.625V, R_L = 50 Ω to V_{CCO} or 100 Ω across the outputs,

 V_{CC} = 2.375V to 2.625V. T_A = -40°C to +85°C, unless otherwise stated.

| Symbol | Parameter | Condition | Min | Тур | Max | Units |
|-----------------------|-----------------------------------|-------------------------------|-------------------------|-------------------------|------------------|-------|
| V _{OH} | Output HIGH Voltage | $R_L = 50\Omega$ to V_{CCO} | V _{CCO} -0.020 | V _{CCO} -0.010 | V _{cco} | V |
| V _{OUT} | Output Voltage Swing | See Figure 3a | 300 | 390 | 475 | mV |
| V _{DIFF_OUT} | Differential Output Voltage Swing | See Figure 3b | 600 | 780 | 950 | mV |
| Rout | Output Source Impedance | | 45 | 50 | 55 | Ω |

Three Level EQ Input DC Electrical Characteristics⁽⁶⁾

 V_{CC} = 2.375V to 2.625V. T_A = -40°C to +85°C, unless otherwise stated.

| Symbol | Parameter | Condition | Min | Тур | Max | Units |
|-----------------|--------------------|-----------------------------------|----------------------|-----|-------------------|-------|
| V _{IH} | Input HIGH Voltage | | V _{CC} -0.3 | | V _{CC} | V |
| V _{IL} | Input LOW Voltage | | 0 | | V _{EE} + | V |
| | | | | | 0.3 | |
| I _{IH} | Input HIGH Current | V _{IH} = V _{CC} | | | 400 | μA |
| I _{IL} | Input LOW Current | V _{IL} = GND | -480 | | | μA |

Notes:

^{6.} The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

AC Electrical Characteristics

 V_{CCO} = 1.14V to 1.26V R_L = 50 Ω to V_{CCO}

 V_{CCO} = 1.7V to 1.9V, 2.375V to 2.625V, R_L = 50Ω to V_{CCO} or 100Ω across the outputs,

 V_{CC} = 2.375V to 2.625V. T_A = -40°C to +85°C, unless otherwise stated.

| Symbol | Parameter | Condition | Min | Тур | Max | Units |
|---------------------------------|-------------------------------------|--------------------------------|-----|-----|-----|-------------------|
| f _{MAX} | Maximum Frequency | NRZ Data | 6.4 | | | Gbps |
| | | V _{OUT} > 200mV Clock | 5.0 | | | GHz |
| t _{PD} | Propagation Delay IN-to-Q | Note 7, Figure 1 | 100 | 150 | 250 | ps |
| tskew | Part-to-Part Skew | Note 8 | | | 100 | ps |
| t _{JITTER} | Data Random Jitter | Note 9 | | | 1 | ps _{RMS} |
| t _r , t _f | Output Rise/Fall Times (20% to 80%) | At full output swing. | 20 | 50 | 80 | ps |

Notes:

- 7. Propagation delay is measured with no attenuating transmission line connected to the input.
- 8. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and input transition.
- 9. Random jitter is measured with a K28.7 pattern, measured at ≤ f_{MAX}.

Interface Applications

For Input Interface Applications see Figures 4a through 4e. For CML Output Termination, see Figures 5a through 5d.

CML Output Termination with 1.2V V_{CCO}

For VCCO of 1.2V, Figure 5a, terminate the output with 50Ω -to-1.2V, DC coupled, not 100Ω differentially across the outputs.

If AC-coupling is used, Figure 5d, terminate into 50Ω to-1.2V before the coupling capacitor and then connect to a high value resistor to a reference voltage.

Do not AC couple with internally terminated receiver. For example, 50Ω ANY-IN input. AC-coupling will offset the output voltage by 200mV and this offset voltage will be too low for proper driver operation. Any unused output pair needs to be terminated when V_{CCO} is 1.2V, do not leave floating.

CML Output Termination with 1.8V/2.5V V_{CCO}

For V_{CCO} of 1.8V or 2.5V, Figures 5a and 5b, terminate with either $50\Omega\text{-to-V}_{\text{CCO}}$ or 100Ω differentially across the outputs. AC- or DC-coupling is fine. See Figure 5c for AC-coupling.

Input AC-Coupling

The SY56016R input can accept AC-coupling from any driver with voltage swing between 0.2V to 1.0V (See DC Electrical Characteristics for more details). Bypass VT with a 0.1µF low ESR capacitor to VCC, as shown in Figures 4c and 4d. VT has an internal high impedance resistor divider as shown in Figure 2a, to provide a bias voltage for AC-coupling.

Input Termination

From 1.8V CML driver: Terminate with VT tied to 1.8V. Do not terminate 100Ω differentially.

From 2.5V CML driver: Terminate with either VT tied to 2.5V or 100Ω differentially.

The input cannot be DC-coupled from a 1.2V CML driver.
