

Voltage Detectors, ME2807 Series

General Description

ME2807 Series are a set of three-terminal low power voltage detectors implemented in CMOS technology. Each voltage detector in the series detects a particular fixed voltage ranging from 2.0V to 7.0V. The voltage detectors consist of a high precision and low power consumption standard voltage source, a comparator, hysteresis circuit, and an output driver. CMOS technology ensures low power consumption.

Features

- Highly accuracy Detection voltage: $\pm 1\%$
- Low power consumption: TYP 1.8uA (Vin=3V)
- Detection voltage range : 2.0V~7.0V in 0.1V increments
- Operating voltage range: 1.5V~18V
- Detect voltage temperature characteristics: TYP $\pm 0.9\text{mV}/^\circ\text{C}$
- Output configuration: CMOS

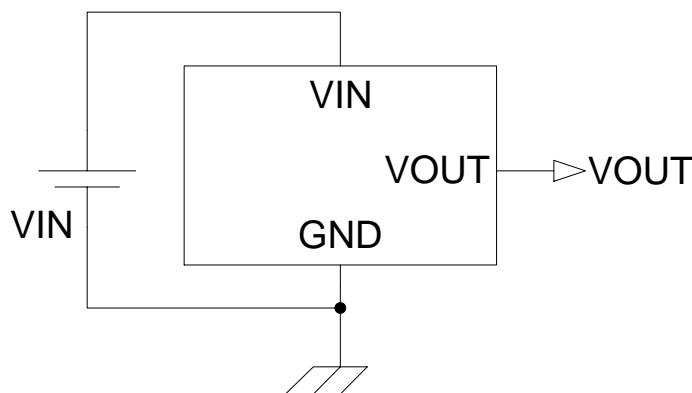

Typical Application

- battery checkers
- Level selectors
- Power failure detectors
- Microcomputer reset
- Battery backup of Memories
- Store non-volatile RAM signal protectors

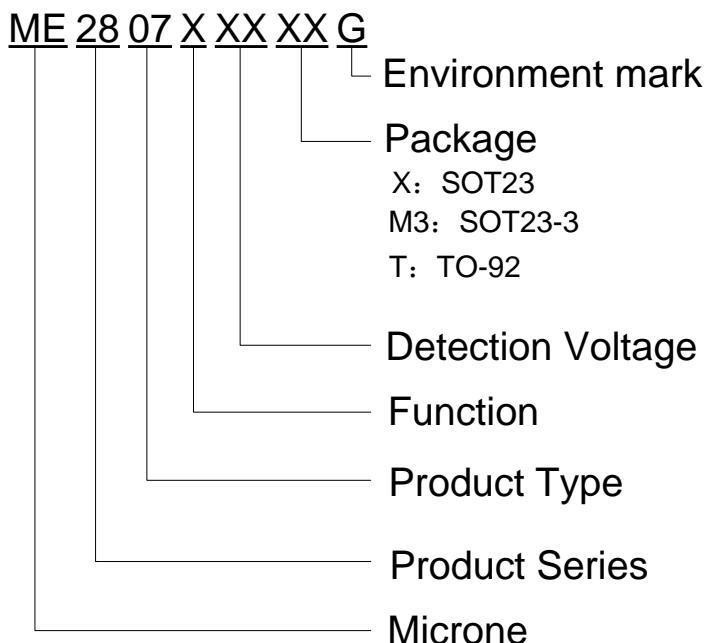

Package

- 3-pin SOT23、SOT23-3、TO-92

Typical Application Circuit

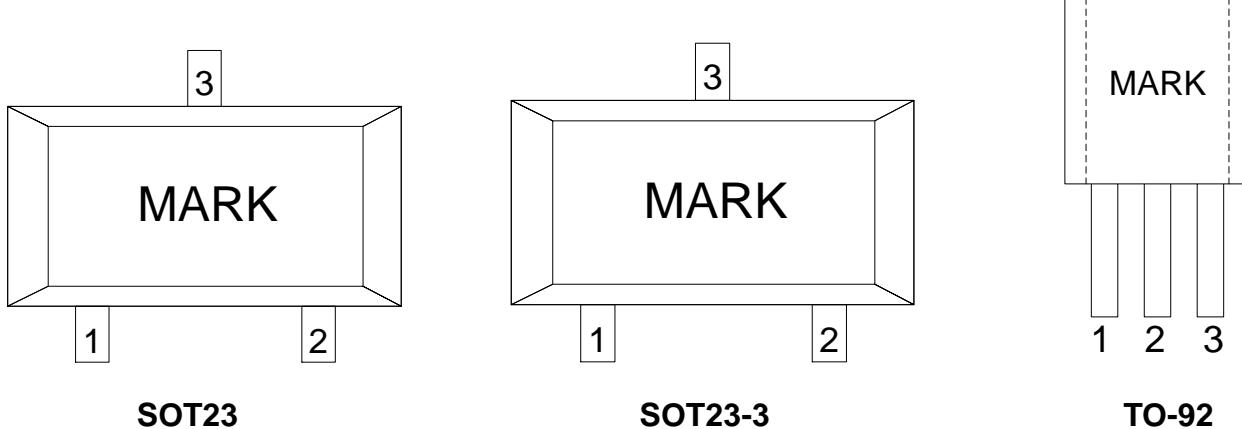

Selection Guide

| product series | product description |
|----------------|----------------------------------------------------------------------------|
| ME2807A27XG | VIN=H→L $V_{DET} = 2.7V$; VIN Falling edge detection; Package: SOT23 |
| ME2807A33XG | VIN=H→L $V_{DET} = 3.3V$; VIN Falling edge detection; Package: SOT23 |
| ME2807A22M3G | VIN=H→L $V_{DET} = 2.2V$; VIN Falling edge detection; Package: SOT23-3 |
| ME2807A33M3G | VIN=H→L $V_{DET} = 3.3V$; VIN Falling edge detection; Package: SOT23-3 |
| ME2807A22TG | VIN=H→L $V_{DET} = 2.2V$; VIN Falling edge detection; Package: TO-92 |
| ME2807B33M3G | VIN=L→H $V_{DET} = 3.3V$; VIN Rising edge detection; Package: SOT23-3 |

NOTE: At present ,there are seventeen kinds of detection voltage value: 2.2V、2.4V、2.5V、2.7V、2.8V、3.0V、3.2V、3.3V、3.5V、3.6V、3.8V、3.9V、4.0V、4.2V、4.3V、4.5V、5.0V。If you need other detection voltage and package, please contact our sales staff.

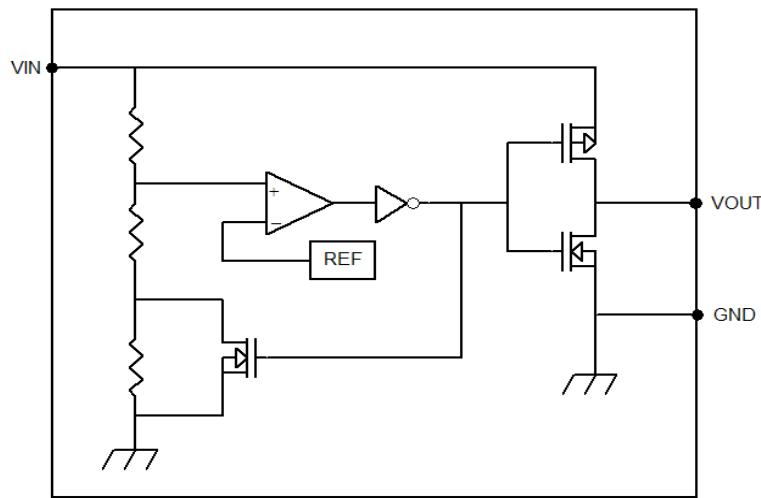

Pin Configuration

Pin Assignment

| Pin Number | | | Pin Name | Functions |
|------------|---------|-------|------------------|----------------|
| SOT23 | SOT23-3 | TO-92 | | |
| 2 | 2 | 3 | GND | Ground |
| 1 | 1 | 1 | V _{OUT} | Output Voltage |
| 3 | 3 | 2 | V _{IN} | Input Voltage |

Functional Description

The ME2807 series is a set of voltage detectors equipped with a high stability voltage reference which is connected to the negative input of a comparator — denoted as V_{REF} in the following figure (Fig. 1). When the voltage drop to the positive input of the comparator (i.e., V_B) is higher than V_{REF} , V_{OUT} goes high, $M1$ turns off, and V_B is expressed as $V_{BH}=V_{IN}\times(R_B+R_C)/(R_A+R_B+R_C)$. If V_{IN} is decreased so that V_B falls to a value that is less than V_{REF} , the comparator output inverts (from high to low), V_{OUT} goes low, V_C is high, $M1$ turns on, R_C is bypassed, and V_B becomes: $V_{BL}=V_{IN}\times R_B/(R_A+R_B)$, which is less than V_{BH} . By so doing the comparator out-put will stay low to prevent the circuit from oscillating when $V_B \approx V_{REF}$. If V_{IN} falls below the minimum operating voltage, the output becomes undefined. When V_{IN} goes from low to $V_{IN}\times R_B/(R_A+R_B) > V_{REF}$, the comparator output goes high and V_{OUT} goes high again.

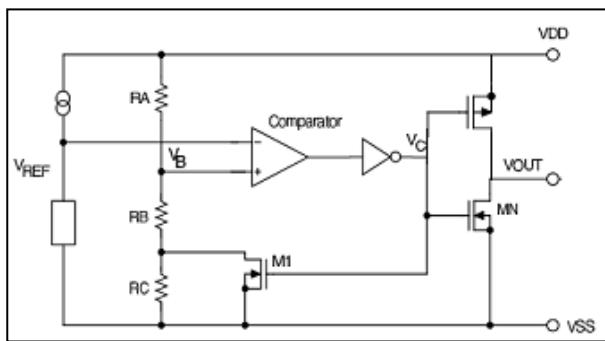

Fig.1 CMOS output voltage detector (ME2807)

ME2807A: The detection voltage is as defined:

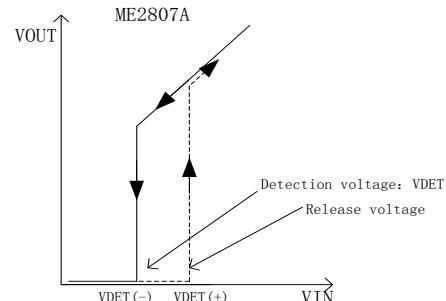

$$V_{DET} = V_{DET(-)} = (R_A + R_B + R_C) \times V_{REF} / (R_B + R_C)$$

The release voltage is as defined:

$$V_{DET(+)} = (R_A + R_B) \times V_{REF} / R_B$$

The hysteresis width is:

$$V_{HYS} = V_{DET(+)} - V_{DET(-)}$$

ME2807B: The detection voltage is as defined:

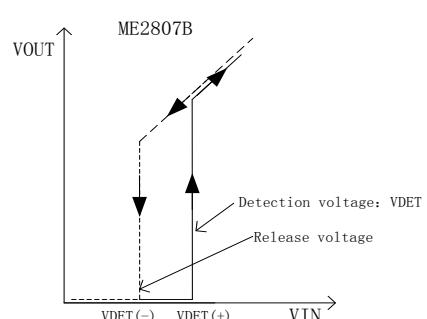

$$V_{DET} = V_{DET(+)} = (R_A + R_B) \times V_{REF} / R_B$$

The release voltage is as defined:

$$V_{DET(-)} = (R_A + R_B + R_C) \times V_{REF} / (R_B + R_C)$$

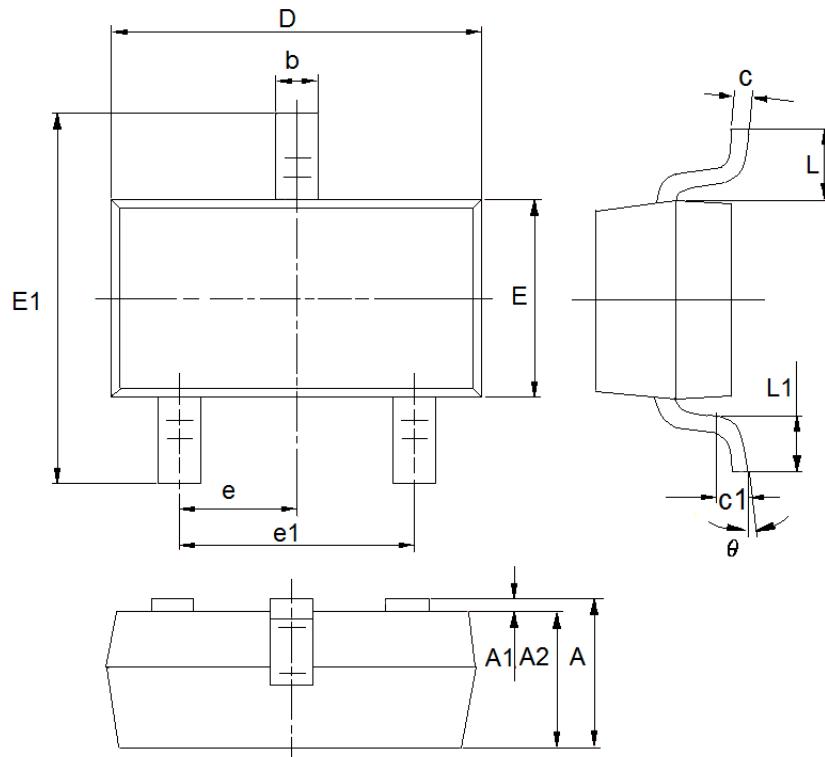

The hysteresis width is:

$$V_{HYS} = V_{DET(+)} - V_{DET(-)}$$
