## 5,000 Watt Transient Voltage Suppressor (TVS) Protection Device

Screening in reference to MIL-PRF-19500 available

## DESCRIPTION

This Transient Voltage Suppressor series M5KP5.0A - M5KP110CA provides a range of standoff voltage options from 5.0 to 110 V in unidirectional, bidirectional, RoHS compliant, and SnPb solder dipped options. Multiple advanced screening levels are available for enhanced reliability. Clamping action is almost instantaneous. As a result, they provide effective protection from ESD or EFT per IEC61000-4-2 and IEC61000-4-4, as well as transients caused by inductive switching and RFI. They also protect from secondary lightning effects per 61000-4-5 at the class levels specified below.

Important: For the latest information, visit our website http://www.microsemi.com.

## FEATURES

- Available in both unidirectional and bidirectional configurations
- $3 \sigma$ lot norm screening performed on standby current $I_{D}$
- $100 \%$ surge tested devices
- Various screening in reference to MIL-PRF-19500. Refer to HiRel Non-Hermetic Product Portfolio for more details on the screening options
(See part nomenclature for all options.)
- High reliability controlled devices with wafer fabrication and assembly lot traceability
- Moisture classification is level 1 with no dry pack required per IPC/JEDEC J-STD-020B
- RoHS compliant versions are available

## Also available in:

P600 package
(commercial plastic axial-leaded)
5KP5.0e3-5KP250CAe3

DO-13 package
(metal axial-leaded)

## APPLICATIONS / BENEFITS

- $\quad$ Selections for 5.0 to 110 volts stand-off voltage ( $\mathrm{V}_{\mathrm{wm}}$ )
- Economical TVS series for thru-hole mounting
- This M5KPxxx series has a significantly reduced body diameter than the 5KPxxx commercial series for a smaller size footprint often required for aviation and other applications
- Pico- to nano-second response time
- Protection from transients due to inductive switching and RFI
- Compliant to IEC 61000-4-2 and IEC 61000-4-4 for ESD and EFT protection respectively
- Secondary lightning protection per IEC61000-4-5 with 42 ohms source impedance:

Class 1, 2, 3, 4: M5KP5.0A to M5KP110CA
Class 5: M5KP5.0A to M5KP110CA (short distance) Class 5: M5KP5.0A to M5KP36CA (long distance)

- Secondary lightning protection per IEC61000-4-5 with 12 ohms source impedance: Class 1 \& 2: M5KP5.0A to M5KP110CA
Class 3: M5KP5.0A to M5KP78CA Class 4: M5KP5.0A to M5KP40CA
- Secondary lightning protection per IEC61000-4-5 with 2 ohms source impedance:

Class 2: M5KP5.0A to M5KP70CA
Class 3: M5KP5.0A to M5KP36CA

| Thermal Resistance, Junction to Ambient ${ }^{(1)}$ | $\mathrm{R}_{\text {өJA }}$ | 80 | ${ }^{\circ} \mathrm{C} / \mathrm{N}$ |
| Peak Pulse Power Dissipation ${ }^{(2)} \quad 10 / 1000 \mu \mathrm{~S}$ | $\mathrm{P}_{\mathrm{PP}}$ | 5000 | W |
| Steady-State Power Dissipation @ $\mathrm{T}_{\mathrm{L}}=25^{\circ} \mathrm{C}$ 0.375 inch ( 9.5 mm ) from body | $P_{\text {D }}$ | $\begin{gathered} 6 \\ 1.56^{(1)} \end{gathered}$ | W |
| ${\mathrm{T} \text { clamping ( } 0 \text { volts to } \mathrm{V}_{(B R)} \mathrm{min} \text {, theoretical) } \begin{array}{r}\text { Unidirectional } \\ \text { Bidirectional }\end{array}}_{\text {a }}$ |  | $\begin{gathered} <100 \\ <5 \end{gathered}$ | $\begin{aligned} & \mathrm{ps} \\ & \mathrm{~ns} \end{aligned}$ |
| Forward Voltage ${ }^{(3)}$ | $V_{F}$ | 3.5 | V |
| Solder Temperature @ 10 s |  | 260 | ${ }^{\circ} \mathrm{C}$ |

Notes: 1. When mounted on FR4 PC board with $4 \mathrm{~mm}^{2}$ copper pads ( 1 oz ) and track width 1 mm , length 25 mm .
2. With impulse repetition rate (duty factor) of $0.01 \%$ or less (also Figure 1 and 2).
3. At 100 amp peak impulse of 8.3 ms half-sine wave (unidirectional only).

## MECHANICAL and PACKAGING

- CASE: Void-free transfer molded thermosetting epoxy body meeting UL94V-0
- TERMINALS: Tin-lead or RoHS compliant annealed matte-tin plating. Solderable per MIL-STD-750, method 2026.
- MARKING: Part number
- POLARITY: Cathode indicated by band. No cathode band on bidirectional devices.
- TAPE \& REEL option: Standard per EIA-296 (add "TR" suffix to part number). Consult factory for quantities.
- WEIGHT: Approximately 1.4 grams
- See Package Dimensions on last page.

## PART NOMENCLATURE

| SYMBOLS \& DEFINITIONS |  |
| :---: | :---: |
| Symbol | Definition |
| $\alpha_{V(B R)}$ | Temperature Coefficient of Breakdown Voltage: The change in breakdown voltage divided by the change in temperature that caused it expressed in $\% /{ }^{\circ} \mathrm{C}$ or $\mathrm{mV} /{ }^{\circ} \mathrm{C}$. |
| $\mathrm{V}_{\text {w }}$ | Working Standoff Voltage: The maximum-rated value of dc or repetitive peak positive cathode-to-anode voltage that may be continuously applied over the standard operating temperature. |
| PPP | Peak Pulse Power. The rated random recurring peak impulse power or rated nonrepetitive peak impulse power. The impulse power is the maximum-rated value of the product of $I_{P P}$ and $V_{C}$. |
| $V_{\text {(BR) }}$ | Breakdown Voltage: The voltage across the device at a specified current $\mathrm{I}_{(\mathrm{BR})}$ in the breakdown region. |
| ID | Standby Current: The current through the device at rated stand-off voltage. |
| IPP | Peak Impulse Current: The maximum rated random recurring peak impulse current or nonrepetitive peak impulse current that may be applied to a device. A random recurring or nonrepetitive transient current is usually due to an external cause, and it is assumed that its effect will have completely disappeared before the next transient arrives. |
| $\mathrm{V}_{\mathrm{c}}$ | Clamping Voltage: The voltage across the device in a region of low differential resistance during the application of an impulse current (l $l_{\mathrm{PP}}$ ) for a specified waveform. |
| $\mathrm{I}_{\text {(BR) }}$ | Breakdown Current: The current used for measuring Breakdown Voltage $\mathrm{V}_{(\mathrm{BR})}$. |

## NOTES:

1. Transient voltage suppressors are normally selected with reverse "stand-off voltage" (Vwm) which should be equal to or greater than the dc or continuous peak operating voltage level.
2. For the bidirectional M5KP5.0CA double the Io maximum standby current to $4000 \mu \mathrm{~A}$.
