

MAX24505, MAX24510 5 or 10 Output Any-Rate Clock Multipliers with Internal EEPROM

General Description

The MAX24505 and MAX24510 are flexible, highperformance clock multiplier/synthesizer ICs with two independent APLLs. Each APLL performs any-to-any frequency conversion. From any input clock frequency 9.72MHz to 750MHz these devices can produce frequency-locked APLL output frequencies up to 750MHz and as many as 10 differential output clock signals that are integer divisors of the APLL frequencies. Output jitter is typically 0.35 to 0.5ps RMS (12kHz to 20MHz) on all outputs and can be as low as 0.24ps RMS. Each device can configure itself from internal EEPROM so that clock signals are available immediately after power-up or reset.
