TO BE VERY CAREFUL !

The LCD driver ICs are made of CMOS process, which is very easy to be damaged by static charge, make sure the user is grounded when handling the LCM.

ABSOLUTE MAXIMUM RATING

(1) Electrical Absolute Ratings

Item	Symbol	Min.	Max.	Unit	Note
Power Supply for Logic	$V_{DD}-V_{SS}$	-0.3	5.5	Volt	--
Power Supply for LCD	$V_{EE}-V_{SS}$	0	26.0	Volt	--
Input Voltage	V1	-0.3	V_{DD}	Volt	--
Supply current for LED backlight	I_{LED}	--	120	mA	--

Note 1: Operator should be grounded during handling LCM.

(2) Environmental Absolute Maximum Ratings

Item	Normal Temperature				Wide Temperature			
	Operating		Storage		Operating		Storage	
	Max,	Min.	Max,	Min.	Max,	Min.	Max,	Min.
Ambient Temperature	0°C	+50°C	-20°C	+70°C	-20°C	+70°C	-30°C	+80°C
Humidity(without condensation)	Note 2,4		Note 3,5		Note 4,5		Note 4,6	

Note 2: $T_a \leq 50^\circ\text{C}$: 80% RH max

$T_a > 50^\circ\text{C}$: Absolute humidity must be lower than the humidity of 85%RH at 50°C

Note 3: T_a at -20°C will be <48hrs at 70°C will be <120hrs when humidity is higher than 75%.

Note 4: Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Note 5: $T_a \leq 70^\circ\text{C}$: 75RH max

$T_a > 70^\circ\text{C}$: absolute humidity must be lower than the humidity of 75%RH at 70°C

Note 6: T_a at -30°C will be <48hrs, at 80°C will be <120hrs when humidity is higher than 75%.

Setting Registers

Code	HEX.	Function	D1	D2
00100001	21H	Set cursor point	X ADRS	Y ADRS
00100010	22H	Set offset register	Data	00H
00100100	24H	Set address pointer	LOW ADRS	HIGH ADRS

(1) Set Cursor Pointer

The position of the cursor is specified by X ADRS and Y ADRS. The cursor position can only moved by this command. Data read/write from MPU never change the cursor pointer. X ADRS and Y ADRS are specified as follows:

X ADRS 00H to 4FH (lower 7 bits are valid)

Y ADRS 00H to 1FH (lower 5 bits are valid)

a) Single-scan

X ADRS 00 to 4FH

Y ADRS 00H to 0FH

b) Dual-scan

X ADRS 00 to 4FH

Y ADRS 00H to 0FH
Upper Screen

Y ADRS 00H to 0FH
Lower Screen

(2) Set offset register

The offset register is used to determine the external character generator RAM area. The T6963C has a 16-bit address bus as follows:

T6963C assign external character generator, when character code set 80H to FFH in using internal character generator. Character codes 00H to 80H assign External character generator, when External generator mode.

The senior 5 bits define the start address in external memory of CG RAM area. The next 8 bits represent the character code of character. In internal CG ROM mode, character codes 00H to 7FH represent the predefined “internal” CG ROM characters, and codes 80H to FFH represent the user’s own “external” characters. The 3 least significant bits indicate one of the 8 rows of 8 dots that define the character’s shape.

Messrs.					
Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.
			A	Apr. 3, 2009	17 / 34

The relationship between display RAM address and offset register

Offset register data	CG RAM hex. Address (start to end)
00000	0000H to 07FFH
00001	0800H to 0FFFH
00010	1000H to 17FFH
11100	E000H to E7FFH
11101	E800H to EFFFH
11110	F000H to F7FFH
11111	F800H to FFFFH

(Example 1)

Offset register	02H
Character code	80H
Character generator RAM start address	0001 0100 0000 0000
	1 4 0 0 H

			A	Apr. 3, 2009	18 / 34

(3) Set Address Pointer

The Set Address Pointer command is used to indicate the start address for writing to (or reading from) external RAM.

The Flowchart for Set Address Pointer command:

Set Control Word

Code	HEX.	Function	D1	D2
01000000	40H	Set Text Home Address	Lower Address	High Address
01000001	41H	Set Text Area	Columns	00H
01000010	42H	Set Graphic Home Address	Lower Address	High Address
01000011	43H	Set Graphic Area	Columns	00H

The home address and column size are defined by this command.

Microtips Technology Inc.

LCD						

If the graphic area setting is set to match the desire number of columns on the LCD, the addressing scheme will be automatically modified so that the start address of each line equals the end address of the previous line + 1.

Mode Set

Code	Function	Operand
1000x000	OR mode	--
1000x001	EXOR mode	--
1000x011	AND mode	--
1000x100	TEXT ATTRIBUTE mode	--
10000xxx	Internal character generator mode	--
10001xxx	External character generator mode	--

The display mode is defined by this command. The display mode does not change until the next command is sent. The logical OR, EXOR, AND of text or graphic display can be displayed. In internal character generator mode, character codes 80H to FFH are automatically assigned the build-in character generator ROM. The character codes 80H to FFH are automatically assigned to the external character generator RAM.

(Example)

Graphic

Text

"OR"

"AND"

"EXOR"

(Note):

Attribute functions can only be applied to text display, since the attribute data is placed in the graphic RAM area.

Microtips Technology Inc.

Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.
			A	Apr. 3, 2009	23 / 34

Attribute function

The attribute operations are Reverse display, Character blink and Inhibit. The attribute data is written into the graphic area which was defined by the Set Control Word command. Only text display is possible in Attribute Function mode, graphic display is automatically disabled. However, the Display Mode command must be used to turn both Text and Graphic on in order for the Attribute function to be available.

The attribute data for each character in the text area is written into the same address in the graphic area. The Attribute function is defined as follows.

Attribute RAM 1 byte

x	x	x	x	d3	d2	d1	d0
---	---	---	---	----	----	----	----

d3	d2	d1	d0	
0	0	0	0	Normal display
0	1	0	1	Reverse display
0	0	1	1	Inhibit display
1	0	0	0	Blink of normal display
				Blink of reverse display
				Blink of inhibit display

Display Mode

Code	Function	Operand
1001000	Display Off	--
1001xx10	Cursor on, blink off	--
1001xx11	Cursor on, blink on	--
100101xx	Text on, graphic off	--
100110xx	Text off, graphic on	--
100111xx	Text on, graphic on	--

1	0	0	1	D3	D2	D1	D0
---	---	---	---	----	----	----	----

D3: Cursor blink 1: on, 0:off
D2: Cursor display 1: on, 0:off
D3: Text display 1: on, 0:off
D3: Graphic display 1: on, 0:off

(Note)

It is necessary to turn on “Text display” and “Graphic display” in the following cases.

- a) Combination of text/graphic display
- b) Attribute function

Messrs.					
Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.
			A	Apr. 3, 2009	24 / 34

Cursor pattern select

Code	Function	operand
10100000	1-line cursor	--
10100001	2-line cursor	--
10100010	3-line cursor	--
10100011	4-line cursor	--
10100100	5-line cursor	--
10100101	6-line cursor	--
10100110	7-line cursor	--
10100111	8-line cursor	--

When cursor display is on, this command selects the cursor pattern in the range 1-line to 8-line. The cursor address is defined by the Cursor Pointer Set command.

1-line cursor

2-line cursor

8-line cursor

Data Auto Read/Write

Code	HEX.	Function	Operand
10110000	B0H	Set Data Auto Write	--
10110001	B1H	Set Data Auto Read	--
10110010	B2H	Auto Reset	--

This command is convenient for sending a full screen of data from the external display RAM. After setting auto mode, a Data Write (or Read) command must be sent between each datum. In Auto mode, the LCM cannot accept any other command.

The Auto Reset command must be sent to the LCM after all data has been sent, to clear Auto mode.

(Note)

a status check for Auto mode

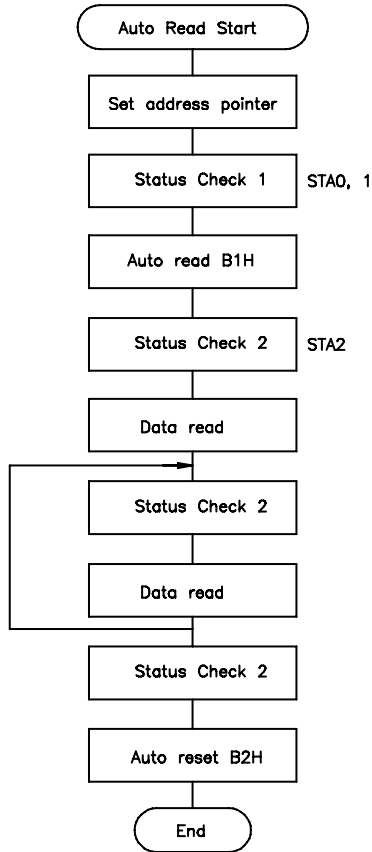

(STA2, STA3 should be checked between sending of each datum. Auto Reset should be performed after checking STA3=1(STA2=1). Refer to the flowchart next page.

			A	Apr. 3, 2009	26 / 34

Data Read/Write

Code	HEX.	Function	Operand
11000000	C0H	Data Write and increment ADP	Data
11000001	C1H	Data Read and increment ADP	--
11000010	C2H	Data Write and decrement ADP	Data
11000011	C3H	Data Read and decrement ADP	--
11000100	C4H	Data Write and Nonvariable ADP	Data
11000101	C5H	Data Read and Nonvariable ADP	--

This command is used for writing data from the MPU to external display RAM, and reading data from external display RAM to the MPU. Data Read should be executed after setting address using Set Address Pointer command. The address pointer can be automatically incremented or decremented using this command.

(Note)

This command is necessary for each 1-bit datum.
Refer to the following flowchart:

Microtips Technology Inc.

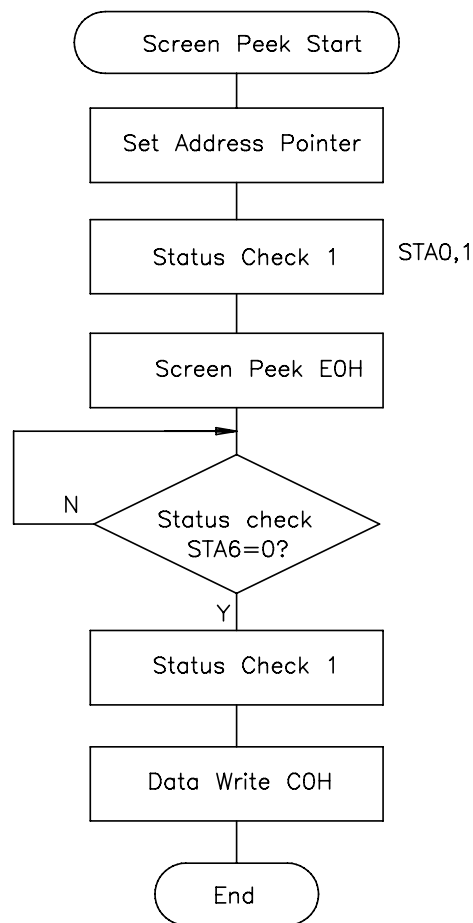

Messrs.					
Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.
			A	Apr. 3, 2009	27 / 34

Screen Peak

Code	HEX.	Function	Operand
11100000	E0H	Screen Peek	--

This command is used to transfer 1 byte of display data to the data stack; this byte can then be read from MPU by data access. The logical combination text and graphic display data on the LCD screen can be read by this command.

The status (STA6) should be checked just after the Screen Peek command. If the address determined by the Set Address Pointer command is not in the graphic area, this command is ignored and a status (STA6) flag is set.

Refer to the following flowchart:

(Note)

This command is available when hardware column number and software column number are the same. Hardware column number is related to Set Text Area and Set Graphic Area command.

Microtips Technology Inc.

Messrs.					
Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.
			A	Apr. 3, 2009	28 / 34

Screen Copy

Code	HEX.	Function	Operand
11101000	E8H	Screen Copy	--

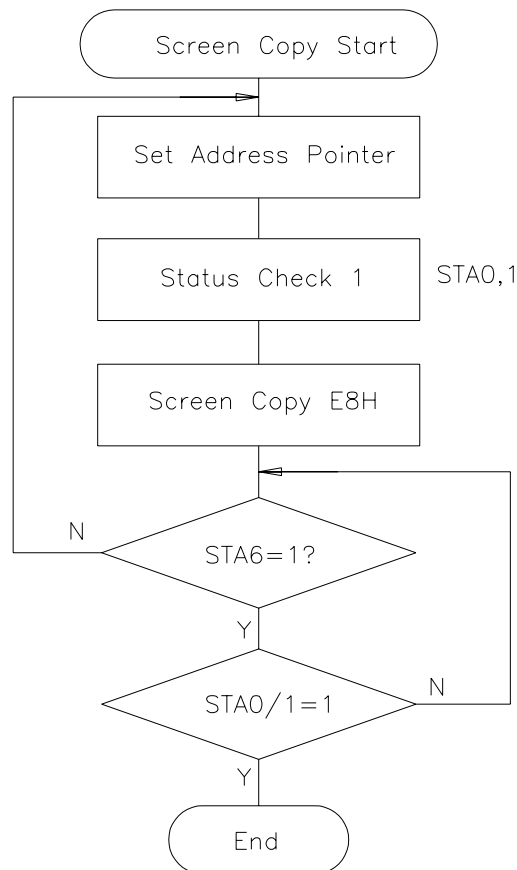

This command copies a single raster line of data to the graphic area. The start point must be using the Set Address Pointer command.

(Note 1)

If the attribute function is being used, this command is not available.
(With attribute data is graphic area data)

(Note 2)

This command is not working for Dual-Scan because the controller IC T6963C cannot separate the upper screen data and lower screen.

(Note)

This command is available when hardware column number and software column number are the same. Hardware column number is related to MD2 and MD3 setting. Software column number is related to Set Text Area and Set Graphic Area command.

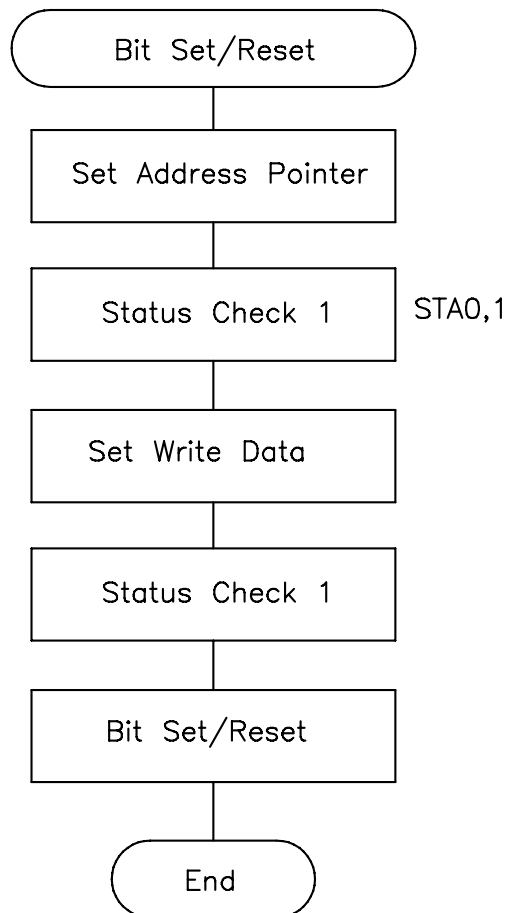

Microtips Technology Inc.

Bit Set/Reset

Code	Function	Operand
11110xxx	Bit Reset	--
11111xxx	Bit Set	--
1111x000	Bit 0 (LSB)	--
1111x001	Bit 1	--
1111x010	Bit 2	--
1111x011	Bit 3	--
1111x100	Bit 4	--
1111x101	Bit 5	--
1111x110	Bit 6	--
1111x111	Bit 7	--

This command use to set or reset a bit of byte specified by the address pointer. Only 1 bit can be set/reset at a time. Refer to the following flowchart:

Messrs.					
Product Specification	Model:	NMTG-S24064IMNHSGW-B	Rev. No.	Issued Date.	Page.

HANDLING PRECAUTIONS

- (1) Treat polarizer very carefully since it is easy to be damaged.
- (2) When cleaning the display surface, use soft cloth (e.g. gauss) with a solvent (recommended below) and wipe lightly.
 - ◆ ethyl alcohol
 - ◆ iso-procolol

Do not wipe the display surface with dry or hard materials that will damage the polarizer surface.

Do not use the following solvents:

- ◆ water
- ◆ ketone
- ◆ aromatics

- (3) Direct current causes electro-chemical reaction with remarkable degradation of the display quality. Give careful consideration to prevent direct current at ON/OFF timing and during operation.
- (4) Avoid strong shock and drop from the height.
- (5) To prevent LCD panels from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.
- (6) Give careful consideration to avoid electrical static discharge with causes uneven contrast.
- (7) Even a small condensation on the contact pads (terminals) causes electro-chemical reaction which makes missing row and column. Give careful attention to avoid condensation. When assembling with zebra connector, clean the surface of the pads with alcohol and keep the air very clean.
