# 3D MOTION click

1. Introduction

3D Motion click carries Microchip's **MM7150** 9-axis sensor fusion motion module. It's a complete self contained solution comprising a 3-axis accelerometer, a gyroscope, a magnetometer, and a **SSC7150** motion coprocessor. The board communicates with the target MCU through the mikroBUS™ I²C interface (SCL, SDA — with support to speeds up to 400kHz); WAKE and RESET pins are also used (in placed of default mikroBUS™ AN and RST respectively), as well as an interrupt pin (INT). It's designed to use a 3.3V power supply.
2. Soldering the headers

Before using your click board™, make sure to solder 1x8 male headers to both left and right side of the board. Two 1x8 male headers are included with the board in the package.

❶

❷
Turn the board upside down so that the bottom side is facing you upwards. Place shorter pins of the header into the appropriate soldering pads.

❸
Turn the board upward again. Make sure to align the headers so that they are perpendicular to the board, then solder the pins carefully.

3. Plugging the board in

Once you have soldered the headers your board is ready to be placed into the desired mikroBUS™ socket. Make sure to align the cut in the lower-right part of the board with the markings on the silkscreen at the mikroBUS™ socket. If all the pins are aligned correctly, push the board all the way into the socket.
4. Essential features

The biggest asset of *3D Motion click* and the MM7150 module is the integrated motion co-processor. This chip takes raw data from individual sensors (accelerometer, magnetometer, and gyroscope) and then uses preprogrammed sensor fusion algorithms to filter, compensate and combine the data. The fusion firmware suppress magnetic distortion, cancels gyroscope drift, and performs in-use background calibrations of all sensors. In the end you get easy access to reliable and accurate positioning and orientation information.

8. Code examples

Once you have done all the necessary preparations, it's time to get your click board™ up and running. We have provided examples for mikroC™, mikroBasic™ and mikroPascal™ compilers on our **Libstock** website. Just download them and you are ready to start.

9. Support

MikroElektronika offers **free tech support (www.mikroe.com/support)** until the end of the product's lifetime, so if something goes wrong, we're ready and willing to help!

6. Dimensions

	mm	mils
LENGTH	42.9	1690
WIDTH	25.4	1000
HEIGHT*	4.65	183

28.6 mm / 1125 mils

25.4 mm / 1000 mils

* without headers

7. Sensors onboard

The MM1750 motion module consists of three chips: Bosch BMC150 accelerometer, Bosch BMG160 Gyroscope, and Microchip's SSC7150 motion coprocessor.

10. Disclaimer
