MCU Cards
for BIGAVR2™ development system

All Mikroelektronika's development systems feature a large number of peripheral modules expanding microcontroller's range of application and making the process of program testing easier. In addition to these modules, it is also possible to use numerous additional modules linked to the development system through the I/O port connectors. Some of these additional modules can operate as stand-alone devices without being connected to the microcontroller.

MCU Cards for BIGAVR2 Development System

The BIGAVR2 development system is supported by empty 64- and 100-pin MCU cards. Schematics provided herein show these MCU cards with soldered microcontrollers. Instead of microcontrollers used in these examples, you can choose and solder another ones. Prior to soldering, check which microcontrollers can be placed on the respective MCU card just to be sure that they are compatible.

Supported microcontrollers:

64-pin MCU cards support the following microcontrollers: ATmega128, ATmega169, ATmega165, ATmega64, ATmega2561, ATmega1281, ATmega329, ATmega649, ATmega325 and ATmega645.

100-pin MCU cards support the following microcontrollers: ATmega640, ATmega1280 and ATmega2560.
