

The MD57XX series is a low-noise LDO that can supply up to 300 mA output current. Designed to meet the requirements of RF and analog circuits, the MD57XX series device provides low noise, high PSRR, low quiescent current, and low line or load transient response figures. Using new innovative design techniques, the MD57XX series offers ultra-low noise performance without a noise bypass capacitor and the ability for remote output capacitor placement.

response figures with a 1- $\mu$ F input and a 1- $\mu$ F output ceramic capacitor

**■ Features:**

- Input Voltage Range: 2.2 V to 5.5 V
- Output Voltage Range: 1.2 V to 4.5 V
- Stable With 1- $\mu$ F Ceramic Input and Output Capacitors
- No Noise Bypass Capacitor Required
- Remote Output Capacitor Placement
- Current Limiter and Over Temperature Protection
- -40°C to 125°C Operating Junction Temperature
- Low Output Voltage Noise: 20 $\mu$ V<sub>RMS</sub>
- High PSRR: 90dB@1kHz
- Output Voltage Tolerance:  $\pm$ 2%
- Low quiescent Current: 20 $\mu$ A
- Low Dropout Voltage: 120mV@300mA

**■ Applications:**

- Mobile Phones, Tablets
- Digital Cameras and Audio Devices
- Portable and Battery-Powered Equipment
- Portable Medical Equipment
- Smart Meters and Field Transmitters
- RF, PLL, VCO, and Clock Power Supplies
- IP Cameras
- Drones

**■ Typical Application:**

MD5736	3.6	SOT23-5L	MD57E36QC3	5736	

**Notes:**

- 1\* Customer can request to customize the output voltage ranged from 1.2V to 4. 5V if desired voltage is not found in the selections.
- 2\* Customer can request customization of package choice.
- 3\* Please pay attention to the MARKING of the product package type.

■ **Ordering Information**

MD57 ①②③④⑤⑥⑦ e.g. MD57E33QC3

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	PIN Configuration	E	
②③	Output Voltage	18~	e.g. 1.8V → ②=1, ③=8
④	Packages Type	Q	SOT23
		W	DFN
⑤	Packages Count	A~Z	e.g. A=3, B=4, C=5 ~
⑥	Minimum Packing Quantity	0~6	0=100, 1=1000, 2=2500, 3=3000, 4=4000, 5=5000, 6=10000
⑦	Customer can request customization of product		

■ **Absolute Maximum Ratings:**

(Unless otherwise indicated:  $T_a=25^{\circ}\text{C}$ )

PARAMETER	SYMBOL	RATINGS		UNITS
Input Voltage	$V_{IN}$	-0.3 ~ 6.0		V
Output Voltage	$V_{OUT}$	-0.3 ~ $V_{IN}+0.3\text{V}$		
Power Dissipation	$P_D$	SOT23-5L	250	mW
		DFN1*1-4L	200	
Thermal Resistance	$R_{\theta JB}^{(1)}$	SOT23-5L	180	$^{\circ}\text{C}/\text{W}$
		DFN1*1-4L	160	
Operating Ambient Temperature	$T_{opr}$	-40 ~ +85		$^{\circ}\text{C}$
Storage Temperature	$T_{stg}$	-40 ~ +125		
ESD Protection	ESD HBM	6000		V

**Note:** Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.

<sup>(1)</sup> Mounted on JEDEC standard 4layer (2s2p) PCB test board

■ **Notes on Use:**

Input Capacitor ( $C_{IN}$ ): 1.0 $\mu\text{F}$  above

Output Capacitor ( $C_{OUT}$ ): 1.0 $\mu\text{F}$  above

**Electrical Characteristics:**

## ■ Feature Description

### 1. Enable (EN)

The MD57XX series EN pin is internally held low by a 1-M $\Omega$  resistor to GND. The EN pin voltage must be higher than the  $V_{ENH}$  threshold to ensure that the device is fully enabled under all operating conditions. The EN pin voltage must be lower than the  $V_{ENL}$  threshold to ensure that the device is fully disabled and the automatic output discharge is activated.

### 2. Low Output Noise

Any internal noise at the MD57XX series reference voltage is reduced by a first order low-pass RC filter before it is passed to the output buffer stage. The low-pass RC filter has a  $-3$  dB cut-off frequency of approximately 0.1 Hz.

### 3. Output Automatic Discharge

The MD57XX series output employs an internal 240- $\Omega$  (typical) pulldown resistance to discharge the output when the EN pin is low, and the device is disabled

### 4. Remote Output Capacitor Placement

The MD57XX series requires at least a 1- $\mu$ F capacitor at the OUT pin, but there are no strict requirements about the location of the capacitor in regards the OUT pin. In practical designs, the output capacitor may be located up to 10 cm away from the LDO.

### 5. Over Temperature Protection (OTP)

Over temperature protection disables the output when the junction temperature rises to approximately 160°C which allows the device to cool. When the junction temperature cools to approximately 135°C, the output circuitry enables. Based on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This thermal cycling limits the dissipation of the regulator and protects it from damage as a result of overheating.

The over temperature protection circuitry of the MD57XX series has been designed to protect against temporary thermal overload conditions. The OTP circuitry was not intended to replace proper heat-sinking. Continuously running the MD57XX series device into thermal shutdown may degrade device reliability.

## ■ Application and Implementation

The MD57XX series is designed to meet the requirements of RF and analog circuits, by providing low noise, high PSRR, low quiescent current, and low line or load transient response figures. The device offers excellent noise performance without the need for a noise bypass capacitor and is stable with input and output capacitors with a value of 1  $\mu\text{F}$ . The MD57XX series delivers this performance in industry standard packages such as SOT23-5, for this device, are specified with an operating junction temperature ( $T_J$ ) of  $-40^\circ\text{C}$  to  $125^\circ\text{C}$ .

### 1. Typical Application

As the figure shows the typical application circuit for the MD57XX series. Input and output capacitances may need to be increased above the 1  $\mu\text{F}$  minimum for some applications.

### 2. Design Requirements

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	2.2 V to 5.5 V
Output voltage	1.8 V
Output current	300 mA
Output capacitor range	1 $\mu\text{F}$ to 10 $\mu\text{F}$
Input/Output capacitor ESR range	5 to 500 m $\Omega$

#### Notes:

1. If the impedance of the power supply is high, which is caused by forgetting installing input capacitor or installing too small value capacitor, the oscillation may occur.
2. Pay attention to the operation conditions of input and output voltage and load current, such that the power consumption in the IC should not exceed the allowable power consumption of the package even though the chip has short circuit protection.
3. IC has a built-in anti-static protection (ESD) circuit, but please do not add excessive stress to the IC.
