## The Big Deal <br> - High Stopband rejection, up to 50 dB <br> - Patented design terminates stopband signals <br> - Pass band cut-off up to 11 GHz <br> - Stop band up to 26 GHz <br> - Excellent repeatability through IPD* process

## Product Overview

Mini-Circuits' X-Series of reflectionless filters now includes 2- and 3-section models, giving you ultra-high rejection in the stopband - up to 50 dB ! Reflectionless filters employ a patented filter topology which absorbs and terminates stopband signals internally rather than reflecting them back to the source. This new capability enables unique applications for filter circuits beyond those suited to traditional approaches. Traditional filters are reflective in the stopband, sending signals back to the source at $100 \%$ power. These reflections interact with neighboring components and often result in intermodulation and other interferences. By eliminating stopband reflections, reflectionless filters can readily be paired with sensitive devices and used in applications that otherwise require circuits such as isolation amplifiers or attenuators.

| Key Features | Advantages |
| :--- | :--- |
| Easy integration with sensitive reflective <br> components, e.g. mixers, multipliers | Reflectionless filters absorb unwanted signals falling in filter stopband, preventing <br> reflections back to the source. This reduces generation of additional unwanted <br> signals without the need for extra components like attenuators, improving system <br> dynamic range and saving board space. |
| High stopband rejection, up to 50 dB | Ideal for applications where suppression of strong spurious signals and intermod- <br> ulation products is needed. |
| Enables stable integration of wideband <br> amplifiers | Because reflectionless filters maintain good impedance in the stopband; they <br> can be integrated with high gain, wideband amplifiers without the risk of creating <br> instabilities in these out of band regions. |
| Cascadable | Reflectionless filters can be cascaded in multiple sections to provide sharper and <br> higher attenuation, while also preventing any standing waves that could affect <br> passband signals. Low \& highpass filters can be cascaded to realize bandpass <br> filters. |
| Excellent power handling in a tiny surface | High power handling extends the usability of these filters to the transmit path for <br> inter-stage filtering. |
| mount device up to 7 W in passband |  |$\quad$| Allows replacement of filter/attenuator pairs with a single reflectionless filter, |
| :--- |
| saving board space. |.

## Reflectionless

Low Pass Filter
$50 \Omega \quad$ DC to 1000 MHz

## Features

- Match to $50 \Omega$ in the stop band, eliminates undesired reflections
- Cascadable
- Excellent stopband rejection, 47 dB typ.
- Temperature stable, up to $105^{\circ} \mathrm{C}$
- Small size, $4 \times 4 \mathrm{~mm}$
- Protected by US Patents $8,392,495 ; 9,705,467$, additional patent pending
- Protected by China Patent 201080014266.1
- Protected by Taiwan Patent I581494

Generic photo used for illustration purposes only CASE STYLE: DG1847
+RoHS Compliant
The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

## Applications

- Mobile
- ISM Applications
- TV broadcasting
- UHF radar

## General Description

Mini-Circuits' XLF-13H+ three-section reflectionless filter employs a novel filter topology which absorbs and terminates stop band signals internally rather than reflecting them back to the source. This new capability enables unique applications for filter circuits beyond those suited to traditional approaches. Traditional filters are reflective in the stop band, sending signals back to the source at $100 \%$ of the power level. These reflections interact with neighboring components and often result in inter-modulation and other interferences. Reflectionless filters eliminate stop band reflections, allowing them to be paired with sensitive devices and used in applications that otherwise require circuits such as isolation amplifiers or attenuators.

## simplified schematic and pad description

| Function | Pad <br> Number | Description |
| :---: | :---: | :--- |
| RF-IN | 3 | RF Input Pad |
| RF-OUT | 16 | RF Output Pad |
| GND | $2,4,15,17 \&$ paddle | Connected to ground |
| NC (GND Externally) | $1,5-14,18-24$ | No internal connection |

Electrical Specifications ${ }^{1}$ at $25^{\circ} \mathrm{C}$

| Parameter |  | F\# | Frequency (MHz) | Min. | Typ. | Max. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pass Band | Insertion Loss | DC - F1 | DC - 1000 | - | 1.9 | 3.0 | dB |
|  | Frequency Cut-off | F2 | 1150 | - | 3.0 | - |  |
|  | VSWR | DC-F1 | DC - 1000 | - | 1.3 | - | :1 |
| Stop Band | Rejection | F3-F3' | 1850-2500 | 13 | 34 | - | dB |
|  |  | F3' - F4 | 2500-10000 | 38 | 47 | - |  |
|  |  | F4-F5 | 10000-19000 | - | 50 | - |  |
|  | VSWR | F3-F3' | 1850-2500 | - | 1.4 | - | :1 |
|  |  | F3' - F4 | 2500-10000 | - | 1.3 | - |  |
|  |  | F4-F5 | 10000-19000 | - | 2.1 | - |  |

Measured on Mini-Circuits Characterization Test Board TB-952-13H+

## Absolute Maximum Ratings ${ }^{4}$

| Parameter | Ratings |
| :--- | :---: |
| Operating Temperature | $-55^{\circ} \mathrm{C}$ to $+105^{\circ} \mathrm{C}$ |
| Storage Temperature | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| RF Power Input, Passband (DC-F1) | 7.9 W at $25^{\circ} \mathrm{C}$ |
| RF Power Input, Stopband (F2-F5) |  |

Passband rating derates linearly to 3.9 W at $105^{\circ} \mathrm{C}$ ambient
${ }^{3}$ Stopband rating derates linearly to 0.75 W at $105^{\circ} \mathrm{C}$ ambien
${ }^{4}$ Permanent damage may occur if any of these limits are exceeded

## SPECIFICATION DEFINITION

## ESD rating

Human body model (HBM): Class 1B (pass 500V) in accordance with ANSI/ESD 5.1-2001

Typical Performance Data at $25^{\circ} \mathrm{C}$

Lead Finish: Matte-Tin

## Application Circuit Example

Pairing mixers with reflectionless filters to improve system dynamic range

Test block diagram: IF output reflection spectrum with single input frequency

Figure 1. IF output reflection spectrum without filter

An application circuit was assembled to measure the IF reflection spectrum at the output of a mixer when the mixer was paired with a conventional filter versus a reflectionless filter.

While the conventional filter reduces the reflections present when the mixer is used alone (no filter), the reflectionless filter virtually eliminates those reflections altogether.

The reflected signal at marker 1 in the figures above exhibits a reduction of more than 20 dB from -28.7 dBm to -50.3 dBm when the reflectionless filter is used as compared to the conventional filter, thus eliminating unwanted spurious mixing products and improvingsystem dynamic range.

For more information, refer to application note AN-75-007

Figure 2. IF output reflection spectrum with conventional filter

Figure 3. IF output reflection spectrum with reflectionless filter

## Additional Notes

A. Performance and quality attributes and conditions not expressly stated in this specification document are intended to be excluded and do not form a part of this specification document.
B. Electrical specifications and performance data contained in this specification document are based on Mini-Circuit's applicable established test performance criteria and measurement instructions.
C. The parts covered by this specification document are subject to Mini-Circuits standard limited warranty and terms and conditions (collectively, "Standard Terms"); Purchasers of this part are entitled to the rights and benefits contained therein. For a full statement of the Standard Terms and the exclusive rights and remedies thereunder, please visit Mini-Circuits' website at www.minicircuits.com/MCLStore/terms.jsp
