

RAST 2.5 Power SEMI-AUTOMATIC TERMINATOR MACHINE For Appli-Mate[™] Connectors Order No. 62300-6000 Instruction Manual

- Description
- Operation
- Maintenance

WARNING

NEVER USE THIS FIXTURE WITHOUT THE GUARDING OR OTHER SAFETY DEVICES IN PLACE, GUARD DOORS CLOSED AND GUARD OVERRIDE SWITCHED "OFF".

FIXTURE GUARDING IS DESIGNED TO PREVENT HANDS FROM REMAINING IN THE DANGER AREAS OF THE FIXTURE.

RUNNING THIS FIXTURE WITHOUT GUARDS, UNDER ANY CIRCUMSTANCES, CAN CAUSE SERIOUS INJURY.

- **NEVER** OPERATE, SERVICE OR ADJUST THIS FIXTURE WITOUT PROPER INSTRUCTION AND WITHOUT FIRST READING AND UNDERSTANDING THE INSTRUCTIONS IN THE OPERATING MANUAL.
- **NEVER** SERVICE THIS FIXTURE WHILE IT IS CONNECTED TO ANY ELECTRICAL POWER SOURCE. DISCONNECT POWER BY SWITCHING OFF THE MAINS ISOLATOR.

WORK SAFELY AT ALL TIMES

For Service, Contact Your Local Molex Sales Office

Molex Application Tooling Group 2200 Wellington Court Lisle, Illinois 60532 Tel: 630-969-4550 Fax: 630-505-0049

Section 1

General Description

- 1.1. Description
- 1.2. Technical Specifications
- 1.3. Applicable Products and Wires
- 1.4. Delivery Check
- 1.5. Ce Compliance

1.1 Description

The 62300-6000 APPLI-MATE[™] (Rast 2.5 Power) Semi-Automatic Terminator Machine, is designed to terminate the APPLI-MATE[™] (Rast 2.5) female connector series (91627, and 91791) onto discrete wire (0.50 mm² or 0.75 mm²). This machine will accommodate circuit size 2 through 12.

1.2 Technical Specifications

Power Specifications:

To function correctly, these fixtures require the following services:

Electrical Service

115/220 VAC 50/60 HZ 1 Phase 2 AMPS

Pneumatic Service

6 BAR (85 psi) Minimum Clean, Dry and Filtered Air Source

Pressure Gauge Settings

Main supply to machine - 6 BAR (85 psi)

1.3 Applicable Products And Wires

Connectors

Appli-Mate[™] RAST 2.5 Power connector series 91627 and 91791. See Connector Chart in Section 6.

Wires

Conductor: 0.50mm² or 0.75mm² Insulation outer diameter: 2.50mm maximum

1.4 Delivery Check

Carefully remove this machine from its shipping container and determine that the following items are included in the package.

Order No.

62300-6000 Semi-Automatic Terminator Machine for APPLI-MATE™ (Rast 2.5 Power) ATS-623006000 Instruction Manual

1.5 CE Compliance

Complies with the general health and safety requirements in accordance with:

-Council Directive 98/37/EEC -Council Directive 89/336/EEC and amended by 92/31/EEC -Council Directive 73/23/EEC

This machinery has been designed and manufactured in accordance with the following transposed harmonised European standards.

- I.S.EN 12100: parts 1 and 2: 2003, Safety of Machinery -Basic concepts, general principles for design.
- I.S.EN 294: 1994, Safety of Machinery Safety distances to prevent danger zones reached by the upper limbs.
- I.S.EN 349: 1993, Safety of Machinery Minimum gaps to avoid crushing of parts of the human body.
- I.S.EN 418: 1993, Safety of Machinery Emergency stop equipment, functional aspects - Principles for design.
- I.S.EN 60204 part 1: 2006, Safety of Machinery -Electrical equipment of machines -Specification for general requirements.

Section 2

Start-Up / Shut Down Procedures

- 2.1. General Operation
- 2.2 Machine Operation and Process Flow
- 2.3 Operator Set Up And Functions

2.1 General Operation

2.1.1 Preliminary

- 1. Connect air supply to fixture. Use 6mm nylon air hose in the quick-fitting.
- 2. Turn on mains power Isolator.
- 3. Release Emergency-stop push buttons if necessary.

2.1.2 System Start-Up (When above conditions are met)

- 1. Reset the power by pushing the Reset button.
- 2. Wait approximately 5 seconds for the air supply to reach operating pressure.
- 3. Home the sensor motor. See section 4.1 (screen 5).
- 4. Enter the circuit size. See section 4.1.
- 5. Press Start button.

2.1.3 Start-Up Following A Fault

- 1. Identify the fault on the touch screen.
- 2. Correct fault.
- 3. Reset the power by pushing the Reset button.
- 4. Wait approximately 5 seconds for the air supply to reach operating pressure.
- 5. Home the sensor motor.
- 6. Press Start button.

2.1.4 Start-Up After An Emergency Stop Or Guard Interrupt

- 1. Release Emergency Stops or close guard doors.
- 2. Press Reset button on operator panel.
- 3. Wait approximately 5 seconds for the air supply to reach operating pressure.
- 4. Home the sensor motor.
- 5. Press Start button on operator panel

2.1.5 Start-Up After A Power Failure

- 1. Release Emergency Stops or close guard doors.
- 2. Press Reset button on operator panel.
- 3. Wait approximately 5 seconds for the air supply to reach operating pressure.
- 4. Home the sensor motor.
- 5. Enter the Circuit size.
- 6. Press Start button on operator panel

2.1.6 System Shut Down

- 1. Press the Emergency Stop button.
- 2. For extended periods of shutdown (i.e. Holidays), switch off the Mains Isolator.

CAUTION: NEVER OPERATE THIS FIXTURE WITHOUT GUARDS IN PLACE.

2.2 Semi-Automatic Terminator Machine Operation and Process Flow

2.2.1 Connector Infeed

The strips of connectors are inserted into the adjustable locator. For operator instruction see section 2.3. *(operator set up and functions)* The gripper then clamps the connectors and transports it into the next part of the process, the cut station. This machine is designed to run one chain of connectors at a time. Connector chains should not be stacked side-by-side.

- A Clamping Cylinder
- B Knurled Screw to tighten/release the adjustable gripper jaw
- C Rail Clamp Screw

2.2.2 Connector Separate (Cut Loose)

- 1. In the automatic mode the connectors are transferred to the cut station by the connector feed cylinder.
- 2. The cut support track automatically moves in behind the first row of connectors.
- 3. The cut blade separates the first row of connectors from the chain, so it can be fed to the next station. (The connector feed cylinder remains forward until after the cut.)
- 4. Note: Cutting loose happens simultaneously with termination.

- A Cut Loose Blade
- B Cut Support Track
- **C** Connector Feed Clamp Cylinder

2.2.3 Connector Transfer

- 1. After a row of connectors has been separated they are transferred to the termination position.
- 2. After a connector has been inserted with wires and has been terminated the finished assembly is transferred out of the terminating station while the newly separated connector enters.
- 3. The connector transfer and the out feed are one motion.
- A Transfer Cylinder
- **B** Connecting Rod
- **C** Transfer Rod
- D Out Feed Pawl

2.2.4 Wire Feed (Mask Tooling)

- 1. After the connector has been transferred from the cut station to the termination station the operator manually inserts the wires into the connector.
- 2. This is aided by using a numbered plate (mask tooling) that slides down in front of the connector.
- 3. This slide centers the connector by engaging spring-loaded comb tooling from below.
- 4. The operator can then use the mask tooling to guide the wires into the connector. See Section 2.3.4 (operator set up and functions)

- A Mask Tooling (numbered plate)
- **B** Manually inserted wires

2.2.5 Wire Sensor

- 1. A Laser Sensor detects that the wires are inserted to the proper depth in the connector.
- 2. According to the connector circuit size and corresponding program selected by the operator (*See Section* 2.3.4) the machine detects that the correct amount of wires have been inserted successfully.
- 3. The operator is prompted when the wire has been successfully inserted. When all wires have been successfully inserted, the machine automatically terminates the connector.
- A Laser Sensor to detect wire position in connector

2.2.6 Termination Station

- 1. The connector is automatically terminated after all the wires have been inserted correctly.
- 2. The termination tool moves downwards and closes the connector, terminating the inserted wires.
- 3. At the same time a new row of connectors is being cut free from the chain.
- 4. The out feed pawl then removes the finished assembly to the end of the track.

- A Open Connector
- **B** Termination Tool

- A Closed Connector
- B Termination Tool

2.3 Operator Set-Up and Functions

2.3.1 Machine Run

To Power Up

- 1. Turn on main disconnect switch on electrical cabinet door.
- 2. Touch screen will reset.
- 3. Laser sensor motor will automatically home itself or request operator to press home button.

To Set Up (Touch Screen)

- 1. Press "Manual"
- 2. Press "Set up"
- 3. Select circuit size (2 12)
- 4. Select positions of wires to be inserted and choose the language.
- 5. Press "main" to return to start screen.

To Load Connector

- 1. Press "Manual "
- 2. Press "Hsg feed open"
- 3. Press "Hsg cut support"
- 4. Feed connectors manually to touch face of cut support blade. See section 2.3.3
- 5. Press "Hsg feed grip"
- 6. Press "Main"
- 7. Press "Load"
- 8. Terminator Machine will automatically feed connectors to cut position.

To Start Run

- 1. Press " Start"
- 2. The first connector will be cut the fed to termination position.
- 3. Mask tooling will lower
- 4. Operator must manually insert wires into connector. See section 2.3.4. Touch screen will prompt operator position of each wire.

To Correct An Incorrectly Inserted Wire

- 1. Cycle can be stopped if wrong wire is put into wrong slot by pressing "REDO"
- 2. Mask tooling will rise allow removal of wire. Note: other wires may fall out of the connector and may need to be re-inserted.
- 3. Press "REDO" to restart cycle.

Note: A wire must be inserted for functions "STOP" or "REDO" to be available on the touch screen.

For detailed explanations of touch screens see SECTION 4.

2.3.2 Material Supply

- 1. The connectors are supplied in continuous chains and can be connected or disconnected at the trailing end of the chain.
- 2. A sensor detects when the machine is running low on connectors.
- The operator then connects the upper housing of the chain in the machine into the lower housing of the new chain. The connector splicing tool should be used to ensure the proper pre-load height.

The operator MUST remove the first part of the connector at the beginning of the strip of connectors to be fed into the machine. The strips must begin with a complete connector.

A Removed when loading an empty machine

2.3.3 Setting Up Connector Feed

- 1. When circuit size is changed the connector feed must be set up.
- 2. Adjust the guide rail to suit the width of the connectors. This can be set from 2-12 positions.

The rail can be moved by opening the clamp screws and simply sliding the rail lightly against the connector chain as shown. The connectors must be able to slide easily. Retighten the clamp screws.

- 3. Loosen the knurled screw at the clamping cylinder and slide the gripper jaw as far as possible to the right.
- 4. Insert a strip of connectors into the machine until they bottom out against the cut support track.
- 5. Slide the gripper jaw to within approximately 2mm of the connectors and tighten the knurled screw.
- 6. Select the circuit size with wire quantity and position on the touch screen and start the machine. (*See Section 2.3.5*)

- A Cut Support Track
- **B** Guide Rail
- C Knurled Screw
- **D** Gripper Jaw

2.3.4 Wire Feed

- 1. The Operator must manually insert each connector circuit size with corresponding number of wires.
- 2. As explained in Section 2.2.5 the operator uses a numbered guide as an aid to insert the wires into the connector. The touch screen prompts the operator to the number slot on the guide to place each wire.
- 3. After the operator has correctly inserted the wire at the correct position an audio tone will sound, an LED will illuminate, and the operator can

move to the next position (prompted on the touch screen).

4. The mask tooling has spring loaded inserts which will keep the wires held in position until the connector has been terminated. After the wire is inserted, do not attempt to pull the wire out as the clamp grip may damage the wire. If an insertion error occurs, it is best to use the REDO function.

- A Spring Loaded Wire Clamp
- **B** Fully inserted Wire

2.3.5 Termination Shut Height Adjustment

- A Shut Height Fine Adjustment Screw
- 1. The termination shut height may be easily adjusted from the front of the machine.
- 2. Use a 24mm open-end wrench and an 8mm hex key to finely adjust the shut height.

- 3. The adjustment screw is situated at the front of machine as shown.
- 4. For termination shut height specifications see document AS-91627-001, section 8.0.

2.3.6 Program Selection (Circuit Size)

- 1. When circuit size (or number of wires loaded) changes, the program must be changed on the touch screen.
- 2. The following procedure must be followed when setting up for a new program and circuit size as well as setting up new connector feed. See section 2.3.2.
- 3. On the touch screen:
 - a. From Ready to Run. Press "Manual"
 - b. From Manual. Press "Set Up"
 - c. From Set Up. "Enter circuit size." Keypad will appear. Select desired circuit size (2-12 circuit). Size will be displayed on circuit size line.
 - d. From Set Up. Press "Next"
 - e. Select Wire Positions. Press the number and Y and N will toggle in the box above the

number. Y= Wire Present, N= No Wire. Ensure that unused circuit positions have N.

- f. From Select Wire Positions. Press "Main" to return to Ready to Run.
- g. Press "Start" to run automatically. Press "Load" to feed a housing into the feed track.

2.3.7 Machine Errors / Faults

The Operator is responsible for ensuring that machine errors / faults are corrected immediately. If the operator is unable to locate or resolve the fault, they should seek assistance from the line Technician. See Section 4 for a full listing of faults.

2.3.8 Finished Product

The operator will ensure that the finished products are removed from the end of the machine.

Section 3

Message Fault Display and Maintenance

- 3.1 Fault Displays
- 3.2 Maintenance
- 3.3 Perishable Tooling
- 3.4 Spare Parts

3.1 Fault Displays

3.1.1 Name and Fuctions

Name	Location	Function
Emergency Stop	I H side of machine	To stop fixture immediately
(Red Mushroom knob	(Control Box)	as well as isolating the mains power
on yellow background)		and air from the fixture.
Power On Lamp	Centre of machine.	To Indicate that the
(Green Lamp)	(Control Box).	machine is ready to run.
Reset Button	LH side of machine.	To connect mains power
(Blue Switch)	(Control Box)	and air to the machine.

3.1.2 Description Of Indicators

Name	Indicator	Description
LED (Green)	Solid Green	Wire inserted
Speaker	Audible "beep"	Wire inserted

3.2 Maintenance

3.21 Cleaning

The RAST 2.5 Power Semi-Automatic Terminator Machine should be cleaned at least once a day with a soft brush to remove dust and debris.

CAUTION: Using compressed air to clean the Terminator is not recommended as debris could become jammed in the tooling and/or come flying out at the operator

3.2.2 Lubrication

The press requires regular lubrication on a monthly basis. Place a small amount of lubricant with Teflon, such as Permatex "Superlube", on the sliding surfaces.

An example of a maintenance chart is shown below. Copy and use this chart to track the maintenance of your Terminator or use this as a template to create you own schedule or use your company's standard chart, if applicable.

3.2.3 **Preventive Maintenance Chart**

Time	Maintenance
	Clean all tooling in the following areas
Daily	✓ Slides
	✓ Cylinders
	 Check out tooling for signs for of wear.
	 Check cutting and termination tools for signs of wear.
Wookly	 Check condition of slides.
WEEKIY	 Check that the air regulator is set to 6 Bar (85 psi).
	 Ensure all shock absorbers and stops are tight.
	✓ Wipe down all tooling in the following areas: slides, cylinders, and carriage rails.
	✓ Carry out Weekly PM.
	 Check slide for excessive play (tighten as necessary).
Monthly	 Check condition of all shock absorbers and stops.
wontiny	 Check out functionality of all sensors.
	 Check for air leaks, loose fittings, damaged airlines, and gauges.
	 Check General condition of all tooling.
6 Months	 Carry out Monthly Preventative Maintenance.

3.3 Perishable Parts

Customers are responsible for maintaining the The RAST 2.5 Power Semi-Automatic Terminator Machine. Perishable parts are those parts that come in contact with the product and will wear out over time. Molex recommends that all customers keep at least one set of the perishable tool kits in stock at all times. This will reduce the amount of production down time. These parts are identified in the Parts List below.

Perishable Tooling List

Part No.	Description	Quantity
62300-6001	Housing Cut Blade	1
62300-6002	Termination Tool	1
62300-6003	Termination Support Blade	1
62300-6004	Termination Support Blade (side latches)	1

3.4 Spare Parts

Customers are responsible for maintaining the The RAST 2.5 Power Semi-Automatic Terminator Machine. Spare parts are available. Moving and functioning parts can be damaged or wear out over time and will require replacement. See assembly drawings and parts lists in Section 5 for additional detail.

Section 4

Touch Screens and Troubleshooting

Touch Screens

Screen 1 Start Up Screen

> ≝screen[1:screen1] Rast 2.5 Power Semi Automatic Assembly Job No. 14167

X

This screen appears after the machine has been powered up. It is only an information screen.

Screen 2 Ready to Run Screen

This screen is displayed when the machine is stopped and there are no fault conditions. It has 3 buttons located on the bottom.

START: This button starts the machine.

- LOAD: When there is no housing in the feed track, press this button to automatically move a part into the feed track.
- MANUAL:Selects manual mode and changes the screen to the Manual #1 [Screen 30].

<u>Screen 3</u> Emergency Stop Screen

This screen is displayed when the Emergency Stop button has pressed. It also appears after power up and after the Safety Guard Open screen, when the door has been closed. Release the Emergency Stop button and press the blue reset button on the main Panel. Note: The wire sensor stepper motor must be re-

homed after E-stop.

<u>Screen 4</u> Safety Guard Open Screen

This screen is displayed when the safety guard is open. Close the guard and press the blue reset button on the main panel.

<u>Screen 5</u> Sensor must be Homed Screen

Screen [5 : Screer	s) Must be	Honed	×
	HOME		

This is displayed after the machine has been reset. The stepper motor that drives the wire sensor must be homed after a power down or Emergency Stop to ensure it is in the correct position to detect the wires. Press the **HOME** button and it will home automatically. When the stepper reaches the home position, the Ready to Run screen will be displayed.

<u>Screen 6</u> Running Screen

This screen is displayed when the machine is running in automatic mode.

Parts Made: Displays how many parts have been made in the current batch.

- **Insert Wire into Position:** Displays the position where the current wire is to be inserted.
- **STOP:**This button stops the automatic mode. The operator must finish inserting all wires into the connector and terminate the connector before the end of cycle is reached.
- **REDO:**This button allows the operator to correct an error on the existing connector. The mask tooling will go up, the wire(s) can be removed and the wire sensor motor will go to home position. Screen 9 will be displayed when this button is pressed.

<u>Screen 7</u> Waiting to Stop Screen

This screen is displayed after the stop button has been pressed and before the current cycle has been completed.

- Parts Made:Displays how many parts have been made in the current batch.
- Insert Wire into Position:Displays the position where the current wire is to be inserted.
- **REDO:**This button allows the operator to correct an error on the existing housing. The mask tooling will go up, the wires can be removed and the wire sensor motor will go to home position. Screen 9 will be displayed when this button is pressed.

<u>Screen 8</u> Sensor is Homing Screen

This screen is displayed after the Home Sensor Button has been pressed on Screen 5. When the sensor reaches the home position the Ready to Run Screen will be displayed.

<u>Screen 9</u> Redo Screen

This screen appears after **REDO** has been pressed on either Screen 6 or 7. When all the wires have been removed, press **REDO** to return to Screen 6 or 7.

<u>Screen 10</u> Conveyor Low Level Fault Screen

This screen is displayed when the connector conveyor level is low. Join another chain to the existing chain and press the **CLEAR** button to continue.

Screen 11

Housing Cut Support not Out Fault Screen

This screen is displayed when the Housing Cut Support Cylinder (*See Section 2.2.2*) fails to activate sensor B0.05. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button. Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 12

Housing Cut Support Not In Fault Screen.

This screen is displayed when the Housing Cut Support Cylinder (*See Section 2.2.2*) fails to activate sensor B0.06. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

<u>Screen 13</u> Housing Feed not Back Fault Screen

This screen is displayed when the Housing Feed Cylinder (*See Section 2.2.2*) fails to activate sensor B0.10. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button. Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 14 Housing Feed not Forward Fault Screen

This screen is displayed when the Housing Feed Cylinder (*See Section 2.2.2*) fails to activate sensor B0.11. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 15

Housing Feed Gripper not Closed Fault Screen

This screen is displayed when the Housing Feed Gripper Cylinder (*See Section 2.2.1*) fails to activate sensor B0.09. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop,

Release Date: 04-28-09 Revision Date: 04-28-09 opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 16

Housing Feed Gripper Cylinder not Open Fault Screen

This screen is displayed when the Housing Feed Gripper Cylinder(*See Section 2.2.1*) fails to deactivate sensor B0.09. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 17

Housing Stick Feed not Back Fault Screen

This screen is displayed when the Housing Stick Feed Cylinder fails to activate sensor B0.07. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop,

opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 18

Housing Stick Feed not Forward Fault Screen

This screen is displayed when the Housing Stick Feed Cylinder fails to activate sensor B0.08. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

<u>Screen 19</u> Mask Tooling not Up Fault Screen

This screen is displayed when the Mask Tooling Cylinder (*See Section 2.2.4*) fails to activate sensor B1.00. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 20 Mask Tooling not Dow

Mask Tooling not Down Fault Screen

This screen is displayed when the Mask Tooling Cylinder (*See Section 2.2.4*) fails to activate sensor B1.01. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 21

Termination Tooling not Up Fault Screen

This screen is displayed when the Termination Tooling Cylinder fails to activate sensor B1.02, (See Section 2.2.6). Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or

Release Date: 04-28-09 Revision Date: 04-28-09 "Air Pressure Low") will take precedence on the display.

<u>Screen 22</u> Termination Tooling not Down Fault Screen

This screen is displayed when the Termination Tooling Cylinder fails to activate sensor B1.03 (See Section 2.2.6).. Check to see if the tooling jammed or if something is stopping the cylinder from completing its stroke. Clear the fault and press **CLEAR** button.

Air may have to be removed from the machine to clear the fault either by pressing Emergency Stop, opening the guard door or disconnecting the air supply. If any of these are done their respective faults ("Emergency Stop", "Safety Guard Open", or "Air Pressure Low") will take precedence on the display.

Screen 23 Air Pressure Low Fault Screen

This screen is displayed when the Air Pressure coming to the Machine is Low. Air pressure less than approx. 4 bar / 60 psi. Check the folowing:

- 1. Factory Air Pressure is OK.
- 2. Air is connected to the machine.
- 3. Air Isolating Valve is turned on.
- 4. Air Pressure is set to 6.0 bar (85 psi)
- 5. Air Safety valve is on.
- 6. Air Leaks air compressor operation.

<u>Screen 30</u> Manual Screen #1

This screen is displayed when Manual has been selected from the Ready to Run Screen or PREV has been selected from the Manual #2 Screen.

🖀 Screen [30 : Screen30]	×
Hsq Cut Support	IN
Hso Stick Feed	FORWARD
Hsa Feed Grip	CLOSE
NEXT SET UP MA	IN CLEAR

Hsg Cut Support Button: This button allows manual operation of the Housing Cut Support Cylinder. Pressing the button once will extend the cylinder (out); pressing it again will retract the cylinder (in). The text on the button will change between **IN** and **OUT** as the button is pressed.

Hsg Stick Feed Button: This button allows manual operation of the Housing Stick Feed. Pressing the button once will allow the feed to move forward; pressing it again will move the feed to the back position. The text on the button will change between FORWARD and BACK as the button is pressed. The feed can only move forward if the Housing Cut Support is out and can only move back if the Housing Feed Gripper is open.

Hsg Feed Grip Button: This button allows manual operation of the Housing Feed Gripper Cylinder. Pressing the button once will allow the cylinder to move open, pressing it again will return the cylinder to the closed position. The text on the button will change between **OPEN** and **CLOSE** as the button is pressed.

- NEXT: Changes the screen to the Manual #2 ScreenSET UP: Selects Set Up mode and changes the screen to the Set Up #1 [Screen 40].
- MAIN: Select Automatic mode and changes the screen to Ready to Run [Screen 2]. CLEAR: Clears any faults.

Screen 31 Manual Screen #2

This screen is displayed when the NEXT button is pressed on Manual Screen #1.

Hsg Feed Button: This button allows manual operation of the Housing Feed. Pressing the button once will allow the feed to move forward; pressing it again will move the feed to the back position. The text on the button will change between **FORWARD** and **BACK** as the button is pressed. (NOTE: Do not move the Housing Feed forward while Termination is down, otherwise a feed jam will result).

Mask Tooling Button:This button allows manual operation of the Mask Tooling Cylinder. Pressing the button once will allow the cylinder to move up, pressing it again will return the cylinder to the down position. The text on the button will change between **UP** and **DOWN** as the button is pressed.

Termination Button: This button allows manual operation of the Termination Cylinder. Pressing the button once will allow the cylinder to move down, pressing it again will return the cylinder to the up position. The text on the button will change between **DOWN** and **UP** as the button is pressed. The cylinder can move **Down** only when the Housing Feed is back.

PREV: Changes the screen to Manual Screen #1.
SET UP:Selects Set Up mode and changes the screen to the Set Up #1 [Screen 40].
MAIN: Select Automatic mode and changes the screen to Ready to Run [Screen 2].
CLEAR: Clears any faults.

<u>Screen 40</u> Set Up #1 Screen

This screen is displayed when the SET UP button is pressed on the Manual Screens or PREV has been selected from the Set Up #2 screen.

CIRCUIT SIZE: This displays the current circuit size of the connectors being processed.

ENTER CIRCUIT SIZE: This button allows the circuit size of the connector to be entered. When the button is pressed a pop-up screen [Screen 65001] will appear. When the ENTER button on the pop-up Screen is pressed, the circuit size will be displayed on the button. Only values between 2 and 12 will be accepted by the display.

Parts Made: Displays how many assemblies have been made in the current batch.

NEXT: Changes the screen to the Set Up #2 Screen.

RESET_COUNTER Button: Resets the value of Parts Made to zero.

MAIN: Select Automatic mode and changes the screen to Ready to Run [Screen 2].

Screen 65001 Pop Up Screen

This screen appears when the Enter circuit Size Button has been pressed on Screen 40. Enter the desired circuit size on the "calculator" screen and press ENT. Only values between 2 and 12 will be accepted.

Screen 41 Set Up Screen #2

This screen is displayed when the NEXT button is pressed on the Set Up #1 Screen.

SELECT WIRE POSITIONS: This selects connector positions where wires are to be inserted. Pressing the number of the wire position will either select or deselect the presence of a wire in that position. The current status of that position is displayed above the number (Y = wire present, N = no wire). NOTE: For circuit sizes below 12, make sure positions past the circuit size are selected N.

PREV: Changes the screen to Set Up Screen #1 (Screen 40).

MAIN: Changes the screen to Ready to Run Screen (Screen 2).

Screen 43 Set Up Screen #4

This screen is displayed when the NEXT button is pressed on the Set Up #3 Screen.

SELECT LANGUAGE. This allows language selection for the touch screen messages.

When the screens are displayed in English pressing TURKISH will automatically redisplay the screen in Turkish. All the Turkish screens have the exact same layout and functions as the English screens.

When the screens are displayed in Turkish pressing ENGLISH will automatically redisplay the screen in English.
