

Hand Crimp Tool Specification Sheet Order No. 63811-7500

FEATURES

- A full cycle ratcheting hand tool ensures complete crimps
- Ergonomic soft grip handles for comfortable crimping
- A precision user-friendly terminal locator wire stop holds terminals in the proper crimping position
- This tool is IPC/WHMA-A-620 Class 2 and RoHS compliant as indicated.

SCOPE

Products: 3.96mm (.156") Pitch KK® Crimp Terminal for 18-24 AWG

★ See Conditions on page 3.

DEFINITION OF TERMS

The above terminal drawing is a generic terminal representation. It is not an image of a terminal listed in the scope.

CONDITIONS:

After crimping, the conductor profiles should measure the following (see notes on page 5).

	Hand Tool Locator	d Tool Wire Size		Conductor Crimp Height		Punch Width (Ref)				Pull Force		*Profile	
Termina Series No.				(RI	EF)	Conductor		Insulation		Minimum		-1-1 TOTHE	
		AWG	mm 2	mm	ln.	mm	ln.	mm	ln.	N	Lb.	Α	В
		18	0.80	1.01-1.11	.040044	2.00	.079	2.50	.098	89.0	20.00	Х	
2477	Black	20	0.50	1.01-1.11	.040044	2.00	.079	2.50	.098	57.8	13.00	Χ	
2411		22	0.35	0.86-0.96	.034038	2.00	.079	2.50	.098	35.6	8.00		Χ
		24	0.20	0.86-0.96	.034038	2.00	.079	2.50	.098	22.2	5.00		Χ

* To Achieve IPC-A-620 Class 2 Crimps, the following over-all wire insulation diameter ranges are recommended:

1. Profile A: 1.68mm (.066 inch max.)-Up to the maximum terminal rating.

LOCATOR

2. Profile B: 1.39-2.38mm (.055-.094 inch)

OPERATION

CAUTION: Install only Molex terminals listed above with this tool. Do not crimp hardened objects as damage can occur to the tool or die.

Open the tool by squeezing the handles together, at the end of the closing stroke, the ratchet mechanism will release the handles, and the hand tool will spring open.

JAWS OPEN

Crimping Terminals

- 1. Select the desired terminal listed in the preceding charts. Make sure that the proper locator is mounted on the tool.
- 2. Swing the terminal locator away from the crimp tool shown in Figure 2. Some terminals with large insulation grips may interfere with the crimp tooling when swinging the locator into position. The terminal must then be loaded into the locator in the closed/crimp position.

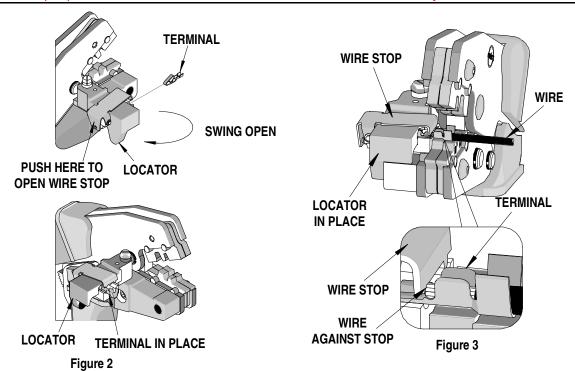

Revision Date: 03-29-08

3. Press down on the wire stop on the locator as shown in Figure
 2. Insert the proper terminal into the proper nest opening.
 Make sure when choosing the nest opening, it will correspond with the A or B profile on the hand tool.

Doc No. ATS-638117500 Release Date: 12-06-06 UNCONTROLLED COPY Page 3 of 7

- 4. Return the locator to its original position.
- 5. Insert the proper wire over the terminal. Gently touch the wire stop with the end of the wire. See Figure 3.
- 6. Compress the terminal by squeezing the tool handles until the ratchet mechanism cycle has been completed. Release handles to open the jaws.

Note: The tamper proof ratchet action will not release the tool until it has been fully closed.

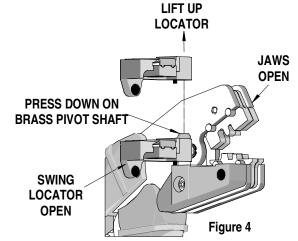

- 7. Remove the crimped terminal from the terminal locator by pressing down on the wire stop and gently pulling on the wire. The terminal locator can be in either position.
- 8. Visually inspect the crimped terminal for proper crimp location.

Note:

A crimp height chart is provided with this manual as <u>Reference Only.</u> Due to the wide range of wires, strands, insulation diameters, and durometers, actual crimp height measurements may very slightly. An occasional, destructive, pull force test should be preformed to check hand tool crimp. Pull Force value Must exceed the Minimum pull force specifications listed on page 2 and 3.

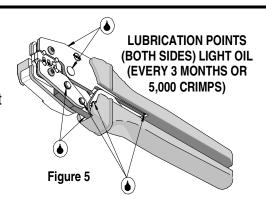

Locator Change Over

Two styles of locators are provided with the crimp hand tool 63811-7500. They are 63811-7576, which is black and 63811-7575, which is gray. Make sure the correct locator is installed for the proper terminal and wire. Follow the steps below to change the locators.

UNCONTROLLED COPY Doc No. ATS-638117500 Release Date: 12-06-06 Page 4 of 7 Revision Date: 03-29-08

- 1. Open the crimp hand tool.
- 2. Swing the existing locator open and away from the hand tool.
- 3. Firmly press down on the brass pivot shaft with your thumb, while pulling the locator up. Slip the locator off the top of the brass pivot shaft. See Figure 4.
- 4. Replace it with the desired locator by putting over the brass pivot shaft and snapping it into place.

Maintenance

It is recommended that each operator of the tool be made aware of, and responsible for, the following maintenance steps:

- 1. Remove dust, moisture, and other contaminants with a clean brush, or soft, lint free cloth.
- 2. Do not use any abrasive materials that could damage the tool.
- 3. Make certain all pins; pivot points and bearing surfaces are protected with a thin coat of high quality machine oil. Do not oil excessively. The tool was engineered for durability but like any fine piece of equipment it needs cleaning and lubrication for a maximum service life of trouble free crimping. Light oil such as 30 weight automotive oil used at the oil points, every 5,000 crimps or 3 months, , shown in Figure 6 will significantly enhance the tool life.
- 4. Wipe excess oil from hand tool, particularly from crimping area. Oil transferred from the crimping area onto certain terminations may affect the electrical characteristics of an application.

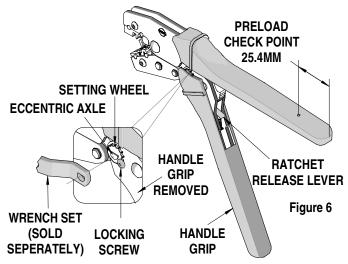

5. When tool is not in use, keep the handles closed to prevent objects from becoming lodged in the crimping dies, and store the tool in a clean, dry area.

Miscrimps or Jams

Should this tool ever become stuck or jammed in a partially closed position, **Do Not** force the handles open or closed. The tool will open easily by pressing the ratchet release lever. See Figure 6.

How to Adjust Tool Preload (See Figure 6)

This hand tool is factory preset to 25-45 LBS. preload. It may be necessary over the life of the tool to adjust tool handle preload force. Listed below are the steps required to adjust the crimping force of the hand tool to obtain proper crimp conditions:

- 1. Remove or fold back the handle grip from the handle to expose the eccentric axle and setting wheel.
- 2. Remove the locking screw with a 2mm hex wrench. The wrench set (63810-0101), is not supplied. It is sold separately from the hand tool.
- 3. Turn the eccentric axle and setting wheel with the wrench or pliers Counter-clockwise (CCW) to increase handle force.
- 4. Replace the locking screw, aligning the nearest notch in the setting wheel to locking screw.
- 5. Replace the handle grip.
- 6. Check the crimp specifications or conduct a pull test after tool handle preload force is adjusted.

UNCONTROLLED COPY Doc No. ATS-638117500 Release Date: 12-06-06 Page 5 of 7 Revision Date: 03-29-08

Warranty

This tool is for electrical terminal crimping purposes only. This tool is made of the best quality materials. All vital components are long life tested. All tools are warranted to be free of manufacturing defects for a period of 30 days. Should such a defect occur, we will repair or exchange the tool free of charge. This repair or exchange will not be applicable to altered, misused, or damaged tools. This tool is designed for hand use only. Any clamping, fixturing, or use of handle extensions voids this warranty.

CAUTION: Molex crimp specifications are valid only when used with Molex terminals and tooling.

CAUTIONS

- 1. Manually powered hand tools are intended for low volume or field repair. This tool is NOT intended for production use. Repetitive use of this tool should be avoided.
- 2. Insulated rubber handles are not protection against electrical shock.
- 3. Wear eye protection at all times.
- 4. Use only the Molex terminals specified for crimping with this tool.

Certification

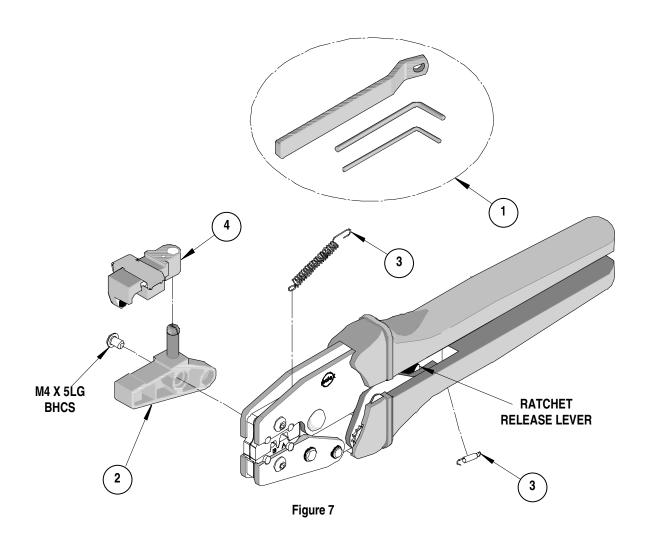

Molex does not certify or re-certify commercial grade hand tools but rather supplies the following guidelines for customers to re-certify hand tools.

- 76 This tool is qualified to pull force only. To re-certify, crimp a terminal to a wire, which has been stripped 12.7mm (1/2") long, so there is no crimping of the insulation. Pull the terminal and wire at a rate no faster than 25mm (1.00") per minute. See the Molex web site for the Quality Crimp Handbook for more information on pull testing.
- % If the tool does not meet minimum pull force values, handle preload should be increased and the pull test rerun, (See How to Adjust Preload).
- When the hand tool is no longer capable of achieving minimum pull force, it should be taken out of service and replaced.
