

## Rotary Knob Kit for the MagAlpha

The Future of Analog IC Technology

# DESCRIPTION

The EVKT-KNOB is an evaluation kit for the MagAlpha magnetic position sensor family. The EVKT-KNOB allows users to run and test the MagAlpha sensor quickly. It is delivered assembled with a knob and magnet. The sensor is mounted in an end-of-shaft configuration.

The EVKT-KNOB is compatible with the MACOM kit, offering seamless connection and operation of the MagAlpha and allowing users to evaluate MagAlpha functionalities and performances, such as noise level, refresh rate, power-up time, magnetic field dependence, and so on.

## FEATURES

- Ready-to-Use Knob with End-of-Shaft Magnet
- Extra Spacers
- Compatible with MagAlpha Communication Interface Kit (EVKT-MACOM)

## **APPLICATIONS**

- Knobs
- Potentiometer Replacements
- Dials
- Appliances
- Consumer Goods

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

## **OVERVIEW**

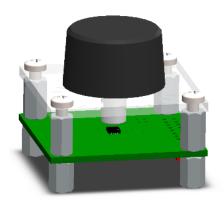

Figure 1: EVKT-KNOB

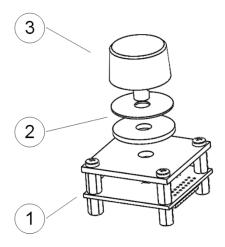

#### **Board Type**

Different board types are available, and each of them has a different schematic and layout design. The board type to use is determined by the selected sensor part number.

| Board Type   | Kit Part Number | Board Part Number | MPS Chip Part Number |
|--------------|-----------------|-------------------|----------------------|
|              | EVKT100-KNOB    | EVMA100-Q-00A     | MA100                |
| Boord type 1 | EVKT300-KNOB    | EVMA300-Q-00A     | MA300                |
| Board type 1 | EVKT700-KNOB    | EVMA700-Q-00A     | MA700                |
|              | EVKT750-KNOB    | EVMA750-Q-00A     | MA750                |
|              | EVKT102-KNOB    | EVMA102-Q-01A     | MA102                |
|              | EVKT302-KNOB    | EVMA302-Q-01A     | MA302                |
|              | EVKT310-KNOB    | EVMA310-Q-01A     | MA310                |
|              | EVKT702-KNOB    | EVMA702-Q-01A     | MA702                |
| Board type 2 | EVKT710-KNOB    | EVMA710-Q-01A     | MA710                |
|              | EVKT730-KNOB    | EVMA730-Q-01A     | MA730                |
|              | EVKT800-KNOB    | EVMA800-Q-01A     | MA800                |
|              | EVKT820-KNOB    | EVMA820-Q-01A     | MA820                |
| -            | EVKT850-KNOB    | EVMA850-Q-01A     | MA850                |

3) Please refer to the chip datasheet directly to know which feature is available on this pin.

## **MAGNETIC FIELD**

A NdFeB cylinder magnet is mounted at the end of the aluminum shaft.

| -                   |  |  |  |  |
|---------------------|--|--|--|--|
| NdFeB (N35 or N35H) |  |  |  |  |
| 1.2T                |  |  |  |  |
| 5mm                 |  |  |  |  |
| 2.5mm               |  |  |  |  |
| Diametrical         |  |  |  |  |
|                     |  |  |  |  |

#### **Table 6: Magnet Characteristics**

#### How to Change the Mechanical Zero

Unscrew the knob with a Hex key 1/16". Hold the shaft with a pin inserted in the 2mm diameter hole and rotate the knob to the desired position. When tightening the screw, ensure that the shaft is fully inserted. Note that the zero position can also be adjusted through programming, as described in the MagAlpha datasheet.

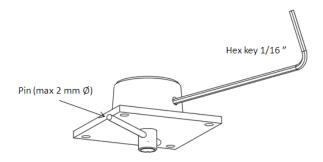

Figure 13: Adjusting the Magnet Angular Position

## How to Change the Magnetic Field Amplitude

The performance of the MagAlpha remains the same from 75mT to 150mT and higher (the MagAlpha has no maximum operating field). The critical region is the lower end of the specified range. Some parameters (i.e.: noise, linearity) deteriorate gradually when the magnetic field becomes weak. The two spacers enclosed in this evaluation kit allow the sensor (the noise level in particular) to be tested at low magnetic fields.

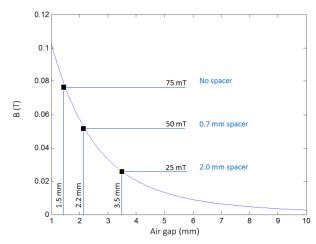

Figure 14: Magnetic Field vs. Air Gap for the Supplied Magnet

The EVMA nominal magnet sensor distance is 1.5mm, providing a magnetic field of 75mT. With the spacers, the field strength is reduced to 50mT or 25mT (see Table 7).

| Spacer Thickness (mm) | Air Gap (mm) | Magnetic Field (mT) |  |  |  |  |
|-----------------------|--------------|---------------------|--|--|--|--|
| None                  | 1.5          | 75                  |  |  |  |  |
| 0.7                   | 2.2          | 50                  |  |  |  |  |
| 2                     | 3.5          | 25                  |  |  |  |  |

#### Table 7: Setting of the Air Gap

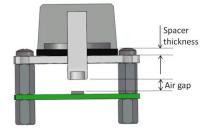

Figure 15: Air Gap Setting

## **MAGNET SUPPLIERS**

The table below shows a non-exhaustive list of possible magnet suppliers. The magnetization direction must be chosen wisely given the fact that most magnets sold are often axially magnetized, which is not a magnetization direction usually required in magnetic angle sensing applications. Angle sensing applications usually use diametrically magnetized magnets.
