## M5K5EMI <br> SEMICONDUCTOR

## Features

- $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}, 15 \mathrm{~V}$, and adjustable output versions
- Adjustable version output voltage range
- 1.23 V to 37 V ( 57 V for HV version) $\pm 4 \%$ max over line and load conditions
- Guaranteed 3A output current
- Wide input voltage range, 40 V up to57V for HV version
- Requires only 4 external components
- $\quad 52 \mathrm{kHz}$ fixed frequency oscillator
- TTL shutdown capability, low power standbymode
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

## Applications

- Simple high-efficiency step-down (buck)regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter (Buck-Boost)

Typical application Figure 1.(Fixed Output Voltage Versions)

## Package Types

LM2576XX-MS/LM2576HVXX-MS
HF
Semiconductor

## Pin Assignments

TO220B-5L/TO220-5L

TO263-5L

## Pin Descriptions

| Name | Description |
| :--- | :--- |
| Vin | Input supply voltage |
| Output | Switching output |
| Gnd | Ground |
| Feedback | Output voltage feedback |
| ON/OFF | ON/OFF shutdown <br> Active is "Low" or floating |

## Block Diagram

$3.3 \mathrm{~V}, \mathrm{R} 2=1.7 \mathrm{~K}$
$5 \mathrm{~V}, \mathrm{R} 2=3.1 \mathrm{~K}$
$12 \mathrm{~V}, \mathrm{R} 2=8.84 \mathrm{~K}$
$15 \mathrm{~V}, \mathrm{R} 2=11.3 \mathrm{~K}$
For ADJ, Version
$\mathrm{R} 1=$ Open, $\mathrm{R} 2=0 \Omega$

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.
Note 2: All limits guaranteed at room temperature (standa rd type face) and at temperature extremes (bold type face).
Note 3: External components such as the catch diode, inductor, input and output capacitors can affect switching regulator system performance. When the LM2576/LM2576HV is used as shown in the Figure 2 test circuit, system performance will be as shown in system parameters section of Electrical Characteristics.
Note 4: Output pin sourcing current. No diode, inductor or capacitor connected to output.
Note 5: Feedback pin removed from output and connected to 0V.
Note 6: Feedback pin removed from output and connected to +12 V for the Adjustable, 3.3 V , and 5 V , versions, and +25 V for the 12 V and 15 V versions, to force the output transistor OFF.
Note 7: $\mathrm{V}_{\mathrm{IN}}=40 \mathrm{~V}$ ( 60 V for high voltage version).
Note 8: The oscillator frequency reduces to approximately 11 kHz in the event of an output short or an overload which causes the regulated output voltage to drop approximately $40 \%$ from the nominal output voltage. This self protections feature lowers the average power dissipation of the IC by lowering the minimum duty cycle from $5 \%$ down to approximately $2 \%$.

AC-Coupled
Horizontal Time Base: $5 \mu \mathrm{~s} / \mathrm{div}$

## Test Circuit and Layout Guidelines

As in any switching regulator, layout is very important. Rapidly switching currents associated with wiring inductance generate voltage transients which can cause problems. For minimal inductance and ground loops, the length of the leads indicated by heavy lines should be kept as short as possible.
Single-point grounding (as indicated) or ground plane construction should be used for best results. When using the Adjustable version physically locate the programming resistors near the regulator, to keep the sensitive feedback wiring short.

#### Abstract

Attention

■ Any and all MSKSEMI Semiconductor products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your MSKSEMI Semiconductor representative nearest you before using any MSKSEMI Semiconductor products described or contained herein in such applications. - MSKSEMI Semiconductor assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specificationsof any andall MSKSEMI Semiconductor products described orcontained herein.

■ Specifications of any and all MSKSEMI Semiconductor products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer'sproducts orequipment.

- MSKSEMI Semiconductor. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with someprobability. It is possiblethat these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits anderror prevention circuitsfor safedesign, redundant design, and structural design.
■ In the event that any or all MSKSEMI Semiconductor products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from theauthorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of MSKSEMI Semiconductor.
- Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. MSKSEMI Semiconductor believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringementsof intellectual property rights or other rightsof third parties.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. Whendesigning equipment, referto the "Delivery Specification" for the MSKSEMI Semiconductor productthat you intend to use.
