

D1U86-D-1600-12-HBxDC Series

86mm 1U Front End DC-DC Power Supply Converter

D1U86-D-1600-12-HB3DC variant shown

D1000-D-1000-12-IID3DC Valiant showin
FEATURES
1600W output power
93% efficiency at half load
12V main output
12V standby output of 30W
1U height: 3.4" x 7.75" x 1.59"
38.6 Watts per cubic inch density
 N+1 redundancy, including hot plugging (up to 8 in parallel)
Current sharing on 12V main output, ORing FET
 Overvoltage, overcurrent, overtemperature protection
Internal cooling fan (variable speed)
■ PMBus [™] / I ² C interface monitoring and control
RoHS compliant
Two Year Warranty
an an talk of ac pc

Available now at www.murata-ps.com/en/3d/acdc.html

PRODUCT OVERVIEW

The D1U86-D-1600-12-HBxDC series are highly efficient 1600 watt, DC input front end supplies with a 12V main output and a 12V (30W) standby. They have current sharing and up to 8 supplies may be operated in parallel. The supplies may be hot plugged, they recover from overtemperature faults, and have logic and PMBus monitoring and control. Their low profile 1U package and >38.6W/cubic inch power density make them ideal for delivering reliable, efficient power to servers, workstations, storage systems and other 12V distributed power systems.

ORDERING GUIDE							
Part Number	Power Output	Main Output	Standby Output ₁	Airflow	Handle Colour

Input Fuse	Power Supply has internal 60A/170VDC fas	Power Supply has internal 60A/170VDC fast blow fuse on the DC line input					
Weight	1.108kg (2.44lbs)						

² The load current of 100% refers to each power module max load connected in an N+1 configuration; therefore the total load will be "N" x 100% load of each module. The share accuracy of ±5% is a fixed percentage irrespective of the total loading and number of units connected in parallel.

PROTECT	ION CHARACTERISTICS					
Output Voltage	Parameter Conditions		Min.	Тур.	Max.	Units
	Overtemperature (intake)	An OTP warning will be issued via the PMBus interface when the air inlet exceeds 70°C; however the power module shall not shut down until critical internal hotspot temperatures are exceeded.		70		°C
	Overtemperature (hotspots)		55-60		°C	
	Overvoltage	Latching	13.2		14.4	V
12V	Overcurrent	For overloads (slow) over current events a 147A nominal constant current will be sustained until the output voltage drops below 3VDC. At this point the unit shall shut down after a 1sec period and remain in that condition for 10secs. The cycle will then repeat. For severe (short circuit) over current events the unit shall shut down within 1ms and remain in this condition for 200ms before attempting a re-start. the unit shall attempt 10 shutdown/re-start cycles before permanently latching off. It will then be necessary to either recycle the DC input or toggle the PSON# input.	137		154	
12VSB	Overvoltage	Latching	13.2		14.4	V
12190	Overcurrent	Auto-recovery	2.75		3.0	A

SDA (Serial Data)	Both	A serial data line compatible with PMBus Requirements Rev 1.1.	serial data line compatible with PMBus [™] Power Systems Management Protocol Part 1 – General equirements Rev 1.1. the signal is provided with a series isolator device to disconnect the internal power supply bus in the 3mA VIL is 0.4V maximum when sin						
Imonitor	Analogue Voltage	The current monitor signal is an analogue DC voltage that indicates the actual current contribution rovided by a single unit. If the power module is the sole contributor to the system load current hen the indicated current (proportional to the DC voltage) is the total load current. If the power module is one of a number ("N") of units "sharing" the overall load current then the ndicated current should be considered as a contribution where the total load will be "N" times hat of the indicated current of a single module. For a single unit the voltage of the signal pin would read 8VDC at 100% module capability. For two identical units sharing the same 100% current this would read 4VDC for perfect current haring (i.e. 50% module load capability per unit).							

ST	STATUS INDICATOR CONDITIONS							
	LED State	Mode	Operating Condition					
1.	Off	DC Turn-off	The incoming DC source is below the minimum power module turn-on specification					
2.	Green – blinking 1Hz	Standby	The power module VStandby output is operating within normal parameters and main output is disabled					
3.	Green – solid	Power-good	The power module VStandby & Main outputs are operating within normal parameters and delivering power					
4.	Yellow – blinking 1Hz	Warning	A warning condition within the power supply has been detected					
5.	Yellow – solid	Fault	A fault condition within the power supply has been detected.

D1U86-D-1600-12-HBxDC Series

86mm 1U Front End DC-DC Power Supply Converter

CURRENT SHARING NOTES

Main Output: Current share is achieved using the droop method. Nominal output voltage (12.20V) is achieved at 50% load and output voltage changes at a rate of 3.10mv per amp. Startup of parallel power supplies is not internally synchronized. If more than 1600W combined power is needed, start-up synchronization must be provided by using a common PS_ON signal. To account for ±5% full load current sharing accuracy and the reduction in full load output voltage due to droop, available output power must be derated by 10% when units are operated in parallel. Internal ORing FETs are provided. Standby output can be tied together for redundancy but total combined output power must not exceed 30W; Internal MOSFET ORing devices are used.
