

Reference Specification

Type KX Series P
(Safety standard certified ceramic capacitor)

DATE: Apr. 20, 2012

Product specifications in this drawing are subject to change or our products described in this drawing may be discontinued without advance notice.

The parts numbers and specifications listed in this drawing are for information only. You are requested to transact the "Approval Sheet for Product Specification", before your ordering.

Engineering Section
Capacitor Division 2
Izumo Murata Manufacturing Co., Ltd.

Do not use these products in any Automotive Power train or Safety equipment including Battery charger for Electric Vehicles and Plug-in Hybrid.
Only Murata products clearly stipulated as “for Automotive use” on its product specification can be used for automobile applications such as Power train and Safety equipment.

Reference only

⚠ CAUTION**1. OPERATING VOLTAGE**

When DC-rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the V_{p-p} value of the applied voltage or the V_{o-p} which contains DC bias within the rated voltage range. When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use a capacitor within rated voltage containing these irregular voltage.

| Voltage | DC Voltage | DC+AC Voltage | AC Voltage | Pulse Voltage(1) | Pulse Voltage(2) |
|------------------------|---|---|--|---|---|
| Positional Measurement |  |  |  |  |  |

2. OPERATING TEMPERATURE AND SELF-GENERATED HEAT

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself.

When the capacitor is used in a high-frequency current, pulse current or the like, it may have the self-generated heat due to dielectric-loss. Applied voltage should be the load such as self-generated heat is within 20 °C on the condition of atmosphere temperature 25 °C. When measuring, use a thermocouple of small thermal capacity-K of $\phi 0.1\text{mm}$ and be in the condition where capacitor is not affected by radiant heat of other components and wind of surroundings. Excessive heat may lead to deterioration of the capacitor's characteristics and reliability.(Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

3. TEST CONDITION FOR WITHSTANDING VOLTAGE**(1) TEST EQUIPMENT**

Test equipment for AC withstanding voltage should be used with the performance of the wave similar to 50/60 Hz sine wave.

If the distorted sine wave or over load exceeding the specified voltage value is applied, the defective may be caused.

(2) VOLTAGE APPLIED METHOD

When the withstanding voltage is applied, capacitor's lead or terminal should be firmly connected to the out-put of the withstanding voltage test equipment, and then the voltage should be raised from near zero to the test voltage.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, test voltage should be applied with the *zero cross. At the end of the test time, the test voltage should be reduced to near zero, and then capacitor's lead or terminal should be taken off the out-put of the withstanding voltage test equipment.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, the surge voltage may arise, and therefore, the defective may be caused.

*ZERO CROSS is the point where voltage sine wave pass 0V.

- See the right figure -

**4. FAIL-SAFE**

When capacitor would be broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure would follow an electric shock, fire or fume.

5. VIBRATION AND IMPACT

Do not expose a capacitor or its leads to excessive shock or vibration during use.

Reference only**6. SOLDERING**

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.

When soldering capacitor with a soldering iron, it should be performed in following conditions.

Temperature of iron-tip : 400 °C max.

Soldering iron wattage : 50W max.

Soldering time : 3.5s max.

7. BONDING, RESIN MOLDING AND COATING

In case of bonding, molding or coating this product, verify that these processes do not affect the quality of capacitor by testing the performance of the bonded, molded or coated product in the intended equipment.

In case of the amount of applications, dryness / hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc.) are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.

The variation in thickness of adhesive, molding resin or coating may cause a outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.

8. TREATMENT AFTER BONDING, RESIN MOLDING AND COATING

When the outer coating is hot (over 100 °C) after soldering, it becomes soft and fragile.

So please be careful not to give it mechanical stress.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

9. OPERATING AND STORAGE ENVIRONMENT

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 °C and 15 to 85%.

Use capacitors within 6 months after delivered. Check the solderability after 6 months or more.

10. LIMITATION OF APPLICATIONS

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

1. Aircraft equipment
2. Aerospace equipment
3. Undersea equipment
4. Power plant control equipment
5. Medical equipment
6. Transportation equipment (vehicles, trains, ships, etc.)
7. Traffic signal equipment
8. Disaster prevention / crime prevention equipment
9. Data-processing equipment exerting influence on public
10. Application of similar complexity and/or reliability requirements to the applications listed in the above.

Reference only

NOTICE**1. CLEANING (ULTRASONIC CLEANING)**

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity : Output of 20 watts per liter or less.

Rinsing time : 5 min maximum.

Do not vibrate the PCB/PWB directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

2. CAPACITANCE CHANGE OF CAPACITORS

- Class 1 capacitors

Capacitance might change a little depending on a surrounding temperature or an applied voltage.

Please contact us if you use for the strict time constant circuit.

- Class 2 and 3 capacitors

Class 2 and 3 capacitors like temperature characteristic B, E and F have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor leaves for a long time. Moreover, capacitance might change greatly depending on a surrounding temperature or an applied voltage. So, it is not likely to be able to use for the time constant circuit.

Please contact us if you need a detail information.

3. PERFORMANCE CHECK BY EQUIPMENT

Before using a capacitor, check that there is no problem in the equipment's performance and the specifications.

Generally speaking, CLASS 2 ceramic capacitors have voltage dependence characteristics and temperature dependence characteristics in capacitance. So, the capacitance value may change depending on the operating condition in a equipment. Therefore, be sure to confirm the apparatus performance of receiving influence in a capacitance value change of a capacitor, such as leakage current and noise suppression characteristic.

Moreover, check the surge-proof ability of a capacitor in the equipment, if needed, because the surge voltage may exceed specific value by the inductance of the circuit.

 NOTE

1. Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
2. You are requested not to use our product deviating from this specification.

Reference only

1. Application

This specification is applied to following safety standard certified ceramic capacitor Type KX.
Type KX is Safety Standard Certified disc ceramic capacitor of Class X1,Y1.

Approval standard and certified number

| | Standard number | *Certified number | AC Rated volt. V(r.m.s.) |
|-------|---|-------------------|-----------------------------|
| UL | UL60384-14 | E37921 | 300 |
| CSA | CSA E60384-14 | 1343810 | 300 |
| VDE | IEC60384-14, EN60384-14 | 40002831 | 300 |
| BSI | EN60065 (8.8,14.2), IEC60384-14, EN60384-14 | KM 37901 | 300 |
| SEMKO | IEC60384-14, EN60384-14 | 1200074 | 300 |
| DEMKO | | D01004 | 300 |
| FIMKO | | 24191 | 300 |
| NEMKO | | P12215096 | 300 |
| ESTI | | 12.0094 | 300 |
| IMQ | | EN60384-14 | V4069 |

*Above Certified number may be changed on account of the revision of standards and the renewal of certification.

2. Rating

2-1. Operating temperature range

-25 ~ +125°C

2-2. Part number configuration

ex.) DE1 E3 KX 472 M TM B P28F
 Product code Temperature characteristic Type name Capacitance Capacitance tolerance Lead code Packing style code Individual specification

- Product code
DE1 denotes X1,Y1 class .

- Temperature characteristic

| Code | Temperature characteristic |
|------|----------------------------|
| B3 | B |
| E3 | E |

Please confirm detailed specification on [Specification and test methods].

- Type name

This denotes safety certified type name Type KX.

- Capacitance

The first two digits denote significant figures ; the last digit denotes the multiplier of 10 in pF.
ex.) In case of 472.

$$47 \times 10^2 = 4700 \text{pF}$$

Reference only

- Capacitance tolerance
Please refer to [Part number list].

- Lead code

| Code | Lead style |
|------|----------------------------|
| A* | Vertical crimp long type |
| T* | Vertical crimp short type |
| N* | Vertical crimp taping type |

* Please refer to [Part number list]

- Packing style code

| Code | Packing type |
|------|-----------------------|
| B | Bulk type |
| A | Ammo pack taping type |

- Individual specification

In case part number cannot be identified without 'individual specification', it is added at the end of part number.

| Code | Specification |
|----------------------------------|--|
| P04F | <ul style="list-style-type: none"> ▶ Rated voltage : AC300V(r.m.s.) ▶ Body thickness(T) : 5.0mm max. ▶ Halogen free |

| 5. Specification and test methods | | | | | | | | | | | | | |
|-----------------------------------|------------------------------|--------------------|--|---|------|---|---|---|---|---|-----------|------|-------|
| No. | Item | | Specification | Test method | | | | | | | | | |
| 1 | Appearance and dimensions | | No marked defect on appearance form and dimensions. Please refer to [Part number list]. | The capacitor should be inspected by naked eyes for visible evidence of defect. Dimensions should be measured with slide calipers. | | | | | | | | | |
| 2 | Marking | | To be easily legible. | The capacitor should be inspected by naked eyes. | | | | | | | | | |
| 3 | Dielectric strength | Between lead wires | No failure. | The capacitor should not be damaged when AC4000V(r.m.s.)<50/60Hz> is applied between the lead wires for 60 s. (Charge/Discharge current ≤ 50mA.) | | | | | | | | | |
| | | Body insulation | No failure. | First, the terminals of the capacitor should be connected together. Then, a metal foil should be closely wrapped around the body of the capacitor to the distance of about 3 to 6mm from each terminal.  About 3 to 6 mm Metal foil Metal balls Then, the capacitor should be inserted into a container filled with metal balls of about 1mm diameter. Finally, AC4000V (r.m.s.)<50/60Hz> is applied for 60 s between the capacitor lead wires and metal balls. (Charge/Discharge current ≤ 50mA.) | | | | | | | | | |
| 4 | Insulation Resistance (I.R.) | | 10000MΩ min. | The insulation resistance should be measured with DC500±50V within 60±5 s of charging. The voltage should be applied to the capacitor through a resistor of 1MΩ. | | | | | | | | | |
| 5 | Capacitance | | Within specified tolerance. | The capacitance should be measured at 20°C with 1±0.1kHz and AC5V(r.m.s.) max.. | | | | | | | | | |
| 6 | Dissipation Factor (D.F.) | | 2.5% max. | The dissipation factor should be measured at 20°C with 1±0.1kHz and AC5V(r.m.s.) max.. | | | | | | | | | |
| 7 | Temperature characteristic | | Char. B : Within ±10 % Char. E : Within +20/-55% (Temp. range : -25 to +85°C) | The capacitance measurement should be made at each step specified in Table. | | | | | | | | | |

| No. | Item | Specification | Test method |
|---|--------------------------------|---|--|
| 9 | Robustness of terminations | Tensile | Lead wire should not cut off. Capacitor should not be broken. |
| | | Bending | Fix the body of capacitor, a tensile weight gradually to each lead wire in the radial direction of capacitor up to 10N and keep it for 10±1 s. With the termination in its normal position, the capacitor is held by its body in such a manner that the axis of the termination is vertical; a mass applying a force of 5N is then suspended from the end of the termination. The body of the capacitor is then inclined, within a period of 2 to 3 s, through an angle of approximately 90° in the vertical plane and then returned to its initial position over the same period of time; this operation constitutes one bend. One bend immediately followed by a second bend in the opposite direction. |
| 10 | Vibration resistance | Appearance | No marked defect. |
| | | Capacitance | Within the specified tolerance. |
| | | D.F. | 2.5% max. |
| 11 | Solderability of leads | Lead wire should be soldered With uniformly coated on the axial direction over 3/4 of the circumferential direction. | The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 s. In both cases the depth of dipping is up to about 1.5 to 2.0mm from the root of lead wires. Temp. of solder : 245±5°C Lead Free Solder (Sn-3Ag-0.5Cu) 235±5°C H63 Eutectic Solder |
| 12 | Soldering effect (Non-preheat) | Appearance | No marked defect. |
| | | Capacitance change | Within ±10% |
| | | I.R. | 1000MΩ min. |
| | | Dielectric strength | Per item 3 |
| | | | Solder temperature: 350±10°C or 260±5°C Immersion time : 3.5±0.5 s (In case of 260±5°C : 10±1 s) The depth of immersion is up to about 1.5 to 2.0mm from the root of lead wires.  |
| 13 | Soldering effect (On-preheat) | Appearance | No marked defect. |
| | | Capacitance change | Within ±10% |
| | | I.R. | 1000MΩ min. |
| | | Dielectric strength | Per item 3 |
| | | | First the capacitor should be stored at 120+0/-5°C for 60+0/-5 s. Then, as in figure, the lead wires should be immersed solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 s.  |
| *1 "room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa | | | |

| | | | <p>Impulse voltage</p> <p>Each individual capacitor should be subjected to a 8kV impulses for three times. Then the capacitors are applied to life test.</p>  <p>Front time (T1) = $1.2 \mu s = 1.67T$ Time to half-value (T2) = $50 \mu s$</p> <p>The capacitors are placed in a circulating air oven for a period of 1000 h. The air in the oven is maintained at a temperature of $125 \pm 2 / -0$ °C, and relative humidity of 50% max.. Throughout the test, the capacitors are subjected to a AC510V(r.m.s.) <50/60Hz> alternating voltage of mains frequency, except that once each hour the voltage is increased to AC1000V(r.m.s.) for 0.1 s.</p> <p>Post-treatment : Capacitor should be stored for 1 to 2 h at *¹room condition.</p> | | | | | | | | | | | | | | | | | | | | | | | | | |

6.Packing specification

- Bulk type (Packing style code : B)

The number of packing = $\frac{\text{Packing quantity}}{\text{Packing quantity}} \times n$

The size of packing case and packing way

*1 : Please refer to [Part number list].
*2 : Standard n = 20 (bag)

Note)
The outer package and the number of outer packing be changed by the order getting amount.

Unit : mm

- Ammo pack taping type (Packing style code : A)

- The tape with capacitors is packed zigzag into a case.
- When body of the capacitor is piled on other body under it.
- There should be 3 pitches and over without capacitors in leader and trailer.

The size of packing case and packing way

Unit : mm

Reference only

7. Taping specification

7-1. Dimension of capacitors on tape

Vertical crimp taping type < Lead code : N4 >

Pitch of component 25.4mm / Lead spacing 10.0mm

Unit : mm

| Item | Code | Dimensions | Remarks |
|---|------|---------------------------------------|--|
| Pitch of component | P | 25.4±2.0 | |
| Pitch of sprocket hole | P0 | 12.7±0.3 | |
| Lead spacing | F | 10.0±1.0 | |
| Length from hole center to lead | P1 | 7.7±1.5 | |
| Body diameter | D | Please refer to [Part number list]. | |
| Deviation along tape, left or right | ΔS | 0±2.0 | They include deviation by lead bend . |
| Carrier tape width | W | 18.0±0.5 | |
| Position of sprocket hole | W1 | 9.0±0.5 | Deviation of tape width direction |
| Lead distance between reference and bottom planes | H0 | 18.0 $^{+2.0}_0$ | |
| Protrusion length | Q | +0.5~-1.0 | |
| Diameter of sprocket hole | φD0 | 4.0±0.1 | |
| Lead diameter | φd | 0.60±0.05 | |
| Total tape thickness | t1 | 0.6±0.3 | They include hold down tape thickness. |
| Total thickness, tape and lead wire | t2 | 1.5 max. | |
| Deviation across tape, front | Δh1 | 2.0 max. | |
| Deviation across tape, rear | Δh2 | | |
| Portion to cut in case of defect | L | 11.0 $^0_{±1.0}$ | |
| Hold down tape width | W0 | 11.5 min. | |
| Hold down tape position | W2 | 1.5±1.5 | |
| Coating extension on lead | e | Up to the end of crimp | |
| Body thickness | T | Please refer to [Part number list]. | |

Reference only

7-2. Splicing way of tape

1) Adhesive force of tape is over 3N at test condition as below.

2) Splicing of tape

a) When base tape is spliced

- Base tape should be spliced by cellophane tape.
(Total tape thickness should be less than 1.05mm.)

No lifting for the direction of progressing

Unit : mm

b) When hold down tape is spliced

- Hold down tape should be spliced with overlapping.
(Total tape thickness should be less than 1.05mm.)

Unit : mm

c) When both tape are spliced

- Base tape and hold down tape should be spliced with splicing tape.

3) Missing components

- There should be no consecutive missing of more than three components.
- The number of missing components should be not more than 0.5% of total components that should be present in a Ammo pack.

Reference only**8. Standard of Outgoing Inspection**

Please refer to Appendix : "OUTGOING INSPECTION AQL STANDARD /
DISC CERAMIC CAPACITORS HIGH VOLTAGE"(SKMKE01).
