Please check the MURATA website (https://www.murata.com/) if you cannot find a part number in this catalog.

#### **EU RoHS Compliant**

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our web page, "Murata's Approach for EU RoHS" (https://www.murata.com/eneu/support/compliance/rohs).

#### **Qualified Standards**

- The products listed here have been produced by ISO 9001 certified factory. <Plant>
  - Fukui Murata Mfg. Co., Ltd.
  - Izumo Murata Mfg. Co., Ltd.
  - Murata Electronics Singapore (Pte.) Ltd.
  - \* Wuxi Murata Electronics Co., Ltd.
  - PHILIPPINE MANUFACTURING CO. OF MURATA, INC.

## Explanation of Symbols in This Catalog

Links are provided to the latest information from the PDF version of the catalog, which is available on the web.

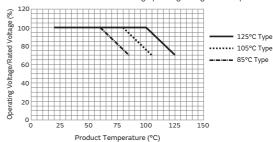

#### Derating 1

This product is suitable when a voltage continuously applied to a capacitor in an operating circuit, is used below (derated) the rated voltage of the capacitor. This model guarantees the test conditions in the endurance test, at a rated voltage x 100% at the maximum operating temperature. A reliability assurance level equivalent to a common product can be secured, by using this product within the voltage and temperature derated conditions recommended in the figure below.

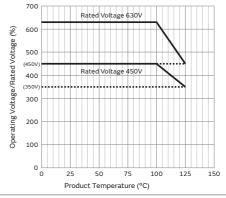

D1

Recommended Conditions of the Derating Operating Voltage and Temperature

#### Derating 2

When the product temperature exceeds  $105^{\circ}$ C, please use this product within the voltage and temperature derated conditions in the figure below.

D3

D2

Derating 3

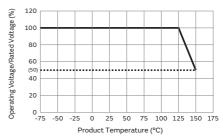

Please apply the derating curve according to the operating temperature.

Please refer to detailed specifications sheet for details.

Derating 4

When the product temperature exceeds 125°C, please use this product within the voltage and temperature derated conditions in the figure below.

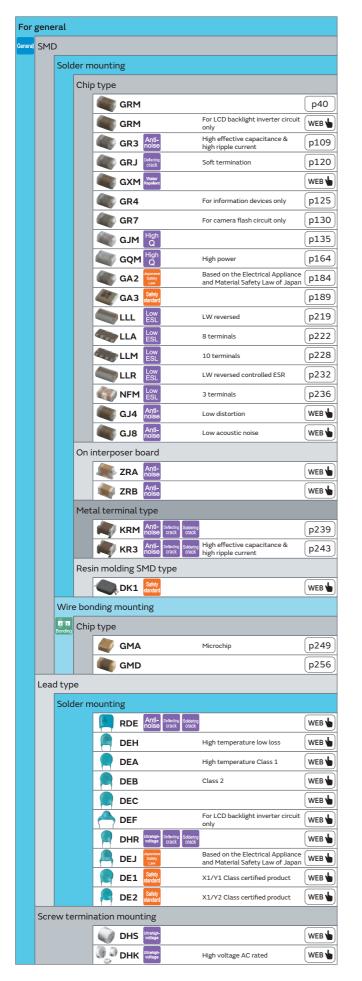

D5

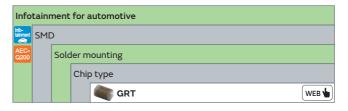

Derating
5

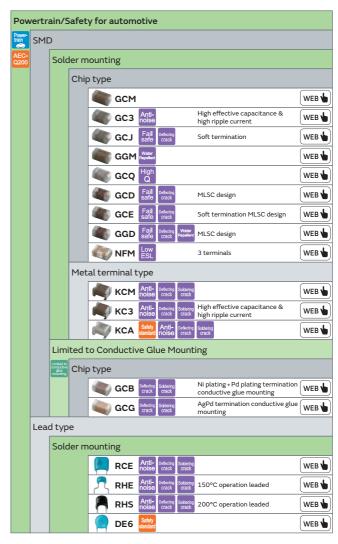

Derating 5

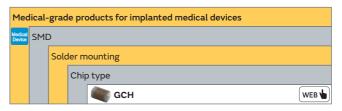

Please apply the rated voltage derating over 150 °C. Please refer to detailed specifications sheet for details.

# Selection Guide for Capacitors

# Catalog Information

Catalog relates to a multilayer ceramic capacitor is below.

Chip Multilayer Ceramic Capacitors for General

Cat No. C02E-21

Safety Certified Ceramic Capacitors/ High Voltage Ceramic Capacitors

Cat No. C85E-5

Chip Multilayer Ceramic Capacitors for Automotive

Cat No. C03E-9

Radial Lead Type

Monolithic Ceramic Capacitors

Cat No. C49E-23

#### Part Numbering

Chip Multilayer Ceramic Capacitors for General

GD	Y3; AC250V (Safety Standard Certified Type GD)
GF	Y2, X1/Y2; AC250V (Safety Standard Certified Type GF)
YA	DC35V

#### Capacitance

Expressed by three-digit alphanumerics. The unit is picofarad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two numbers. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If any alphabet, other than "R", is included, this indicates the specific part number is a non-standard part.

Ex.)	Code	Capacitance
	R50	0.50pF
	1R0	1.0pF
	100	10pF
	103	10000pF

#### 8 Capacitance Tolerance

Code	Capacitance Tolerance
В	±0.1pF
С	±0.25pF
D	±0.5pF (Less than 10pF)
Ь	±0.5% (10pF and over)
F	±1%
G	±2%
J	±5%
K	±10%
М	±20%
W	±0.05pF

**9**Individual Specification Code (Except **LLR**) Expressed by three figures.

#### **9**ESR (**LLR** Only)

Code	ESR
E01	100mΩ
E03	220mΩ
E05	470mΩ
E07	1000mΩ

#### Packaging

Code	Packaging
L	ø180mm Embossed Taping
D/E/W	ø180mm Paper Taping
K	ø330mm Embossed Taping
J/F	ø330mm Paper Taping
Т	Bulk Tray

### **Search Capacitors**

Specifications and Test Methods, Package, Chart of Characteristic Data, please refer to the search web page.

https://www.murata.com/en-global/products/capacitor

Links are provided to the product detail pages on the web, and are shown below in the product number table from the PDF version of the catalog which is available on the web.

### Status and Features Icons

The status and features of products can be checked at once. When ② is clicked, a description of each icon will be displayed

### Stock Check (Where to buy)

Some products can request free samples. Reference inventory information from agents and web-based companies.

### **Data Sheet**

The product details page can be output in PDF.

### How to read part numbers

Describes the meaning of the part number

### Series Information

This links to the introduction page of each series.

### **Detailed Specifications Sheet**

- Rated value
- Specifications and Test Methods
- Package
- Caution, Notice(Storage, Soldering and Mounting, ....etc.)

### Characteristics Data

The following characteristics data of the main products can be acquired.

- SPICE Netlist (mod type)
- S parameter (S2P type)
- Reliability Test Data \*Typical data
- Shape (Dimensions)
- Rated Values
- Specification by Packaging Code/ Minimum Order Quantity
- Weight (1 pc/ø180mm reel)

### Chart of Characteristic Data

The main products published characteristic data.

- Frequency characteristics (ESR, Impedance)
- DC bias characteristics
- AC voltage characteristics
- Capacitance temperature characteristics
- Calorific property by ripple current

### Design Tools SimSurfing

The SimSurfing design tools are useful for displaying the graph, downloading CSV data and overwriting the product number graph.

Chip Multilayer Ceramic Capacitors for General Purpose

This is Murata primary products renowned for both small size and large capacitance value with latest advanced technology.

### **Features**

Achieves large-capacity and small size in a multilayer structure.

- Sn plating is applied to the external electrodes; excellent solderability.
- High reliability with no polarity.

	Ceramic Capacitors	Tantalum Capacitor	Aluminum Electrolytic Capacitor	Conductive Polymer Capacitor
Price	0	0	0	0

### Specifications

Size (mm)	0.25×0.125mm to 5.7×5.0mm
Rated Voltage	2.5Vdc to 3150Vdc
Capacitance	0.10pF to 330μF
Main Applications	1. Rated voltage 100V Max.  High Dielectric Constant Type · · · For decoupling and smoothing circuits  Temperature Compensating Type · · · For tuning circuits, oscillating circuits,  and high frequency filter circuits  2. Rated voltage 200V min.  High Dielectric Constant Type · · · For clamp snubber circuits and smoothing circuits  Temperature Compensating Type · · · Power supply damper snubber

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

High Effective Capacitance & High Ripple Current Chip Multilayer Ceramic Capacitors for General Purpose

### **GR3 Series**

This is a general purpose high ripple resistance product excellent in DC bias characteristics.

#### **Features**

 When a DC bias is applied, a capacitance higher than conventional products (X7R characteristics) can be acquired.

About twice the capacitance can be secured when DC200V is applied.

### Improved ripple resistance performance compared to conventional products (X7R characteristics).

In the case of a product with a capacitance of  $1\mu F$ , when the exothermic temperature reaches 20°C at frequency f=300kHz, the amount of resistance of a product with conventional material is 2.9Arms; however, the new material is 4.7Arms.

### 3 This product has a noise reduction effect.

Since dielectric materials which enable a reduction of noise are used, this product is more effective for reducing noise compared to the general purpose GRM series.

### Specifications

Size (mm)	2.0×1.25mm to 5.7×5.0mm
Rated Voltage	250Vdc to 630Vdc
Capacitance	10000pF to 1.0μF
Main Applications	For PFC (Power Factor Correction) Circuits of Power Supplies, EMI Suppression and Smoothing Circuits

### GR3 Series Specifications and Test Methods (1)

No	lte	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)						
1	Appearance		No defects or abnormalities.	Visual inspection.						
2	Dimension		Within the specified dimensions.	Using calipers and micrometers.						
3	Voltage Proof		No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: DC500V (200% of the rated voltage) Applied Time: 1 to 5s Charge/discharge current: 50mA max.						
4	Insulation Resistance (I.R.)		More than 10000MΩ or 100MΩ • μF (Whichever is smaller)	Measurement Point: Between the terminations Measurement Voltage: DC250±25V Charging Time: 60±5s Measurement Temperature: Room Temperature						
5	Capacitance		Shown in Rated value.	Measurement Temperature: Room Temperature						
6	Dissipation Fa	actor (D.F.)	0.01 max.	Measurement Frequency: 1.0±0.1kHz Measurement Voltage: AC1.0±0.2V (r.m.s.)						
7	Temperature Characteristics of Capacitance		D7: Within +22/-33% (-55 to +125°C)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3.  Step Temperature (°C)  1 Reference Temp. ±2  2 Min. Operating Temp. ±3  3 Reference Temp. ±2  4 Max. Operating Temp. ±3  5 Reference Temp. ±2  • Pretreatment  Perform a heat treatment at 150+0/-10°C for 1h±5min and then let sit for 24±2h at room condition*.						
		Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate A shown in "Complement of Test Method".  Kind of Vibration: A simple harmonic motion 10Hz to 55Hz to 10Hz (1min)  Total amplitude: 1.5mm  This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).						
	Vibration	Capacitance	Within the specified initial value.							
8		D.F.	Within the specified initial value.							
9	Solderability		Solderability		Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (wt)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 245±5°C Immersion time: 2±0.5s Immersing in speed: 25±2.5mm/s.		
		Appearance	No defects or abnormalities.	Test Method: Solder bath method						
		Capacitance Change	Within ±10%	Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 260±5°C Immersion time: 10±1s						
	Resistance	D.F.	Within the specified initial value.	Immersing in speed: 25±2.5mm/s.						
10	to Soldering Heat  Voltage Proof		Within the specified initial value.  No defects.	Exposure Time: 24±2h at room condition*.  Preheat: GR331 size max.: 120 to 150°C for 1min  GR332 size min.: 100 to 120°C for 1min  and 170 to 200°C for 1min  • Pretreatment  Perform a heat treatment at 150+0/-10°C for 1h±5min and then let sit for 24±2h at room condition*.						
11	of Termination		No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate A shown in "Complement of Test Method".  10N, 10±1s  Applied Direction: In parallel with the test substrate and vertical with the capacitor side.						
12			No defects or abnormalities.	Solder the capacitor on the test substrate B shown in "Complement of Test Method".  Then apply the force in the direction shown in "Test Method of Substrate Bending Test" of "Complement of Test Method".  Flexure: 2mm (GR321 size: 1mm)  Holding Time: 5±1s  Soldering Method: Reflow soldering

### GR3 Series Specifications and Test Methods (2)

Continued from the preceding page.

### Complement of Test Method

#### 1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

<ul> <li>M:</li> </ul>	aterial:	Glass	Fnoxy	Roard

b: ±5 gap between support stand center and test stand center

- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed

The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

## GR3 Series Specifications and Test Methods (3)

No	Ite	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)	
1	Appearance		No defects or abnormalities.	Visual inspection.	
2	Dimension		Within the specified dimensions.	Using calipers and micrometers.	
3	Voltage Proof	-	No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: DC756V (120% of the rated voltage) Applied Time: 1 to 5s Charge/discharge current: 50mA max.	
4	Insulation Res	sistance (I.R.)	More than 10000MΩ or 100MΩ • μF (Whichever is smaller)	Measurement Point: Between the terminations Measurement Voltage: DC500±50V Charging Time: 60±5s Measurement Temperature: Room Temperature	
5	Capacitance		Shown in Rated value.	Measurement Temperature: Room Temperature	
6	Dissipation Fa	actor (D.F.)	0.01 max.	Measurement Frequency: 1.0±0.1kHz Measurement Voltage: AC1.0±0.2V (r.m.s.)	
7	Temperature Characteristics of Capacitance		D7: Within +22/-33% (-55 to +125°C)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3.    Step   Temperature (°C)     1	
	Appearance		No defects or abnormalities.	Solder the capacitor on the test substrate A shown in	
		Capacitance	Within the specified initial value.	"Complement of Test Method". Kind of Vibration: A simple harmonic motion	
8	Vibration D.F.		Within the specified initial value.	10Hz to 55Hz to 10Hz (1min) Total amplitude: 1.5mm This motion should be applied for a period of 2h. in each 3 mutually perpendicular directions (total of 6h).	
9	Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (wt)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 245±5°C Immersion time: 2±0.5s Immersing in speed: 25±2.5mm/s.	
		Appearance	No defects or abnormalities.	Test Method: Solder bath method	
		Capacitance Change	Within ±10%	Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 260±5°C Immersion time: 10±1s	
	Resistance	D.F.	Within the specified initial value.	Immersing in speed: 25±2.5mm/s.	
10	to	I.R.	Within the specified initial value.	Exposure Time: 24±2h at room condition*.  Preheat: GR331 size max.: 120 to 150°C for 1min	
	Soldering Heat	Voltage Proof	No defects.	GR332 size min.: 120 to 120°C for 1min  GR332 size min.: 100 to 120°C for 1min  and 170 to 200°C for 1min  • Pretreatment  Perform a heat treatment at 150+0/-10°C for 1h±5min and then let sit for 24±2h at room condition*.	
11	Adhesive Strength of Termination		No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate A shown in "Complement of Test Method".  10N, 10±1s  Applied Direction: In parallel with the test substrate and vertical with the capacitor side.	

 $<sup>^{*}</sup>$  Room Condition: Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmosphere pressure: 86 to 106kPa

- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

KR3

Soft Termination Chip Multilayer Ceramic Capacitors for General Purpose

## **GRJ Series**

### Cracking caused by flexing stress after board mounting is minimized due to resin external electrodes!

#### **Features**

The resin external electrodes suppress cracks by board deflection.

Cracking of the ceramic element is suppressed by the resin of the external electrodes, which releases the stress.

Note: Cracks may occur in the capacitor body if excessive stress beyond the "guaranteed range of board bending strength (\*)" provided in the specifications is applied. Capacitors with cracks in them may cause a drop in insulation resistance, which could lead to a short circuit. (\*) For details on the guaranteed range of board bending strength, check the "Detailed Specification Sheet" on the Product Details Page.

Suppresses the occurrence of cracking caused by deflection stress at the time of board mounting, etc.

Due to the specification of the measuring instrument, measurements can be performed up to 8mm.

Ideal for consumer and industrial electronic equipment, etc. where there heat stress, vibration and impact are applied.

### Specifications

Size (mm)	0.6×0.3mm to 5.7×5.0mm
Rated Voltage	6.3Vdc to 1000Vdc
Capacitance	220pF to 47μF
Main Applications	Consumer & Industrial Electronic Equipment

Please refer to the capacitor search tool on the Murata Web site for details.

This catalog contains only a portion of the product lineup.

### **GRJ Series Specifications and Test Methods**

Specifications and Test Methods, please refer to the search web page. https://www.murata.com/en-global/products/capacitor

Chip Multilayer Ceramic Capacitors for Ethernet LAN and Primary-secondary Coupling of DC-DC Converters

### **GR4** Series

Size (L\*W): 4.5x2.0mm - 5.7x5.0mm / X7R Char. / DC2kV Realized large capacity and small size while maintaining high withstand voltages by the multilayer structure.

#### **Features**

For information devices of Ethernet LAN (IEEE802.3.) and primary - secondary couplings of DC-DC converters.

Realized large capacity and small size while maintaining high withstand voltages by the multilayer structure.

Dedicated for reflow soldering.

### Specifications

Size (mm)	4.5×2.0mm to 5.7×5.0mm
Rated Voltage	2000Vdc
Capacitance	100pF to 10000pF
Main Applications	For Ethernet LAN, Primary-secondary coupling for DC-DC converters

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

Continued from the preceding page.

### Complement of Test Method

#### 1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

GR4 Series Specifications and Test Methods (1)

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

Part Number	Dimension (mm)					
Pait Nullibei	a	b				
GR442	3.5	7.0	2.4			
GR443	3.5	7.0	3.7			
GR455	4.5	8.0	5.6			

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number		Dimensi	on (mm)	
Pait Number	a	Ь	С	d
GR442	3.5	7.0	2.4	1.0
GR443	3.5	7.0	3.7	1.0
GR455	4.5	8.0	5.6	1.0

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

### (a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

Ω

Chip Multilayer Ceramic Capacitors for Camera Flash circuit only

### **GR7 Series**

Limited to camera flashes. Ideal for trigger capacitors and voltage doubler capacitors!

#### **Features**

Ideal for the trigger of flash circuits, as a higher capacitance can be acquired compared to conventional products (X7R characteristics) when a DC bias is applied.

Contributes to the miniaturization of cameras with the low profile.

### Specifications

Size (mm)	2.0×1.25mm to 3.2×1.6mm
Rated Voltage	350Vdc
Capacitance	10000pF to 47000pF
Main Applications	For camera flash

This catalog contains only a portion of the product lineup. Please refer to the capacitor search tool on the Murata Web site for details.

### GR7 Series Specifications and Test Methods (1)

Continued from the preceding page.

### Complement of Test Method

#### 1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

Part Number		imension (mm	1)
Part Number	a	ь	С
GR721	1.2	4.0	1.65
GR731	2.2	5.0	2.0

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number	Dimension (mm)					
Part Number	a	b	С	d		
GR721	1.2	4.0	1.65	1.0		
GR731	2.2	5.0	2.0	1.0		

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

### (a) Support State

(b) Test State

- a: ±2 gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

### GJM Series

This product improves the high frequency characteristics and contributes to a reduction of power consumption by the High Q and low ESR.

#### **Features**

Mainly ideal for mobile communication devices and temperature compensation of related modules.

This product is ideal for temperature compensation of high frequency circuits, such as resonant circuits, tuning circuits, and impedance matching circuits where the operating characteristics of the device are greatly affected by the capacitance fluctuation.

### High Q and low ESR in VHF, UHF and microwave frequency bands.

High Q and low ESR were achieved at a high frequency by adopting ceramic material as the dielectric material which enables an extremely low loss at high frequency, and base metal electrodes as the internal electrodes.

### (3) Can be used for tight tolerance.

In addition to standard tolerance, the allowable range of this product is also suitable for the following tight tolerance.

Capacitance Range	Standard Capacitance Tolerance (Capacitance Tolerance Symbol)	Narrow Capacitance Tolerance (Capacitance Tolerance Symbol)
to 0.9pF	±0.1pF (B)	±0.05pF (W)
1.0 to 5.0pF	±0.25pF (C)	±0.05pF (W), ±0.1pF (B)
5.1 to 9.9pF	±0.5pF (D)	±0.05pF (W), ±0.1pF (B), ±0.25pF (C)
10pF to	±5% (J)	±2% (G)

#### Specifications

Size (mm)	0.4×0.2mm to 1.0×0.5mm
Rated Voltage	6.3Vdc to 50Vdc
Capacitance	0.10pF to 47pF
Main Applications	Small communication devices, such as mobile phones and high frequency communication modules

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

## GJM Series Specifications and Test Methods (1)

No	Ite	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)	
1	1 Rated Voltage		Shown in Rated value.	The rated voltage is defined as the maximum voltage which may be applied continuously to the capacitor.  When AC voltage is superimposed on DC voltage, V <sup>p-p</sup> or V <sup>O-p</sup> , whichever is larger, should be maintained within the rated voltage range.	
2	Appearance		No defects or abnormalities.	Visual inspection.	
3	Dimension		Within the specified dimensions.	Using Measuring instrument of dimension.	
4	Impulse Volta	ge	No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: 300% of the rated voltage Applied Time: 1 to 5s Charge/discharge current: 50mA max.	
5	Insulation Res	istance (I.R.)	C ≦ 0.047μF: More than 10000MΩ C > 0.047μF: More than 500Ω • F C: Nominal Capacitance	Measurement Point: Between the terminations Measurement Voltage: DC Rated Voltage Charging Time: 2min Charge/discharge current: 50mA max. Measurement Temperature: Room Temperature	
6	Capacitance		Shown in Rated value.	Measurement Temperature: Room Temperature	
7	Q		30pF and over: Q ≥ 1000 30pF and below: Q ≥ 400+20C C: Nominal Capacitance (pF)	Capacitance         Frequency         Voltage           C ≦ 1000pF         1.0±0.1MHz         0.5 to 5.0Vrms	
8	Temperature 8 Characteristics of Capacitance		Nominal values of the temperature coefficient is shown in Rated value. But,the Capacitance Change under 20°C is shown in Table A. Capacitance Drift Within ±0.2% or ±0.05pF (Whichever is larger.)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3. The capacitance drift is calculated by dividing the differences between the maximum and minimum measured values in the step 1, 3 and 5 by the cap. value in step 3.  Step Temperature (°C)  1 Reference Temp. ±2  2 Min. Operating Temp. ±3  3 Reference Temp. ±2  4 Max. Operating Temp. ±3  5 Reference Temp. ±2	
9	Adhesive Strength of Termination		No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate shown in Fig.3.  Type Applied Force (N) GJM02 1 GJM03 2 GJM15 5  Holding Time: 10±1s Applied Direction: In parallel with the test substrate and vertical with the capacitor side.	
		Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate shown in Fig.3.	
		Capacitance	Within the specified initial value.	Kind of Vibration: A simple harmonic motion	
10	Vibration	Q	Within the specified initial value.	10Hz to 55Hz to 10Hz (1min)  Total amplitude: 1.5mm  This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).	
	Substrate Bending Test Capacitance Change		No defects or abnormalities.	Solder the capacitor on the test substrate shown in Fig.1.	
11			Within ±5% or ±0.5pF (Whichever is larger)	Pressurization method: Shown in Fig.2 Flexure: 1mm Holding Time: 5±1s Soldering Method: Reflow soldering	
12	2 Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (mass)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu Solder Temp.: 245±5°C Immersion time: 2±0.5s

Recommended derating conditions on voltage and temperature

GJM Series Specifications and Test Methods (2)

These Part Numbers are designed for use in the circuits where continuous applied voltage to the capacitor is derated than rated voltage, and guarantee Durability Test with 100%  $\times$  rated voltage as testing voltage at the maximum operating temperature.

The voltage and temperature derating conditions on the upside are recommended for use to ensure the same reliability level as normal specification.

High Q and High Power Chip Multilayer Ceramic Capacitors for General Purpose

## **GQM** Series

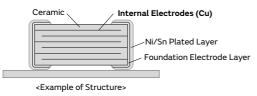

### High Frequency Capacitor Ideal for PA Design of Base Stations

### **Features**

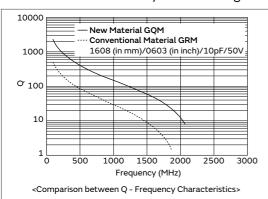

Mainly ideal for base stations of mobile communication devices and temperature compensation of related modules.

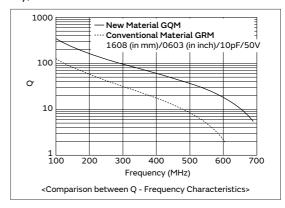

This product is ideal for temperature compensation of high frequency circuits, such as resonant circuits, tuning circuits, and impedance matching circuits where the operating characteristics of the device are greatly affected by the capacitance fluctuation.

High Q and low ESR in VHF, UHF and microwave frequency bands.

High Q and low ESR were achieved at a high frequency by adopting ceramic material as the dielectric material which enables an extremely low loss at high frequency, and base metal electrodes as the internal electrodes.

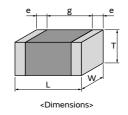

### (3) Can be used for tight tolerance.

In addition to standard tolerance, the allowable range of this product is also suitable for the following narrow tolerance.

Capacitance Range	Standard Capacitance Tolerance (Capacitance Tolerance Symbol)	Narrow Capacitance Tolerance (Capacitance Tolerance Symbol)
to 0.9pF	±0.1pF (B)	±0.05pF (W)
1.0 to 5.0pF	±0.25pF (C)	±0.05pF (W), ±0.1pF (B)
5.1 to 9.9pF	±0.5pF (D)	±0.05pF (W), ±0.1pF (B), ±0.25pF (C)
10pF to	±5% (J)	±2% (G)

### Specifications

Size (mm)	1.0×0.5mm to 2.8×2.8mm
Rated Voltage	50Vdc to 500Vdc
Capacitance	0.10pF to 510pF
Main Applications	Measuring instruments, other ultra compact/thin devices

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

## GQM Series Specifications and Test Methods (1)

No	lte	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)
1	. Rated Voltage		Shown in Rated value.	The rated voltage is defined as the maximum voltage which may be applied continuously to the capacitor. When AC voltage is superimposed on DC voltage, VP-P or VO-P, whichever is larger, should be maintained within the rated voltage range.
2	Appearance		No defects or abnormalities.	Visual inspection.
3	Dimension		Within the specified dimensions.	Using Measuring instrument of dimension.
4	Voltage Proof		No defects or abnormalities.	Measurement Point: Between the terminations Applied Time: 1 to 5s Charge/discharge current: 50mA max.  Test Voltage:  Rated Voltage  100V 300% of Rated Voltage 200V 250% of Rated Voltage
5	Insulation Res	sistance (I.R.)	More than $10000 M\Omega$	Measurement Point: Between the terminations Measurement Voltage: DC Rated Voltage Charging Time: 2min Charge/discharge current: 50mA max. Measurement Temperature: Room Temperature
6	Capacitance		Shown in Rated value.	Measurement Temperature: Room Temperature
7	Q		30pF and over: Q ≧ 1400 30pF and below: Q ≧ 800+20C C: Nominal Capacitance(pF)	Capacitance       Frequency       Voltage         C ≦ 1000pF       1.0±0.1kHz       0.5 to 5.0Vrms
8	Temperature Characteristics of Capacitance		Nominal values of the temperature coefficient is shown in Rated value. But, the Capacitance Change under 25°C is shown in Table A. Capacitance Drift Within ±0.2% or ±0.05pF (Whichever is larger.)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3. The capacitance drift is calculated by dividing the differences between the maximum and minimum measured values in the step 1, 3 and 5 by the cap. value in step 3.  Step Temperature (°C)  1 Reference Temp. ±2  2 Min. Operating Temp. ±3  3 Reference Temp. ±2  4 Max. Operating Temp. ±3  5 Reference Temp. ±2
9	Adhesive Stre	0	No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate shown in Fig.3. Applied Force: 5N Holding Time: 10±1s Applied Direction: In parallel with the test substrate and vertical with the capacitor side.
		Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate shown in Fig.3.
		Capacitance	Within the specified initial value.	Kind of Vibration: A simple harmonic motion  10Hz to 55Hz to 10Hz (1min)
10	Vibration	Q	Within the specified initial value.	Total amplitude: 1.5mm This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).
	Cultatura	Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate shown in Fig.1.
11	Substrate Bending Capacitan Test Change		Within ±5% or ±0.5pF (Whichever is larger)	Pressurization method: Shown in Fig.2 Flexure: 1mm Holding Time: 5±1s Soldering Method: Reflow soldering
12	2 Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (mass)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu Solder Temp.: 245±5°C Immersion time: 2±0.5s
		Appearance	No defects or abnormalities.

GA3 GB

Based on the Electrical Appliance and Material Safety Law of Japan Chip Multilayer Ceramic Capacitors for General Purpose

## GA2 Series

This product is for commercial power supplies, compliant with the Electrical Appliance and Material Safety Law of Japan.

#### **Features**

Sn plating is applied to the external electrodes, providing excellent solderability.

- Realized large capacitance value and small size while maintaining high withstand voltages by the multilayer structure.
- This product is only for reflow soldering.
- There are types for connections between lines and connections between lines and ground.

#### Specifications

Size (mm)	4.5×2.0mm to 5.7×5.0mm
Rated Voltage	250Vac
Capacitance	470pF to 0.10μF
Main Applications	General purpose for Japan

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

### GA2 Series Specifications and Test Methods (1)

Continued from the preceding page.

#### Complement of Test Method

1. Test Substrate

 $The \ test \ substrate \ Should \ be \ Substrate \ A \ or \ Substrate \ B \ as \ described \ in \ "Specifications \ and \ Test \ Methods".$ 

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

Part Number	Dimension (mm)				
Pait Number	a	b	С		
GRM42	3.5	7.0	2.4		
GRM43	3.5	7.0	3.7		
GRM52	4.5	8.0	3.2		
GRM55	4.5	8.0	5.6		

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number	Dimension of Pattern (mm)				
Part Number	a	b	С	d	
GRM42	3.5	7.0	2.4	1.0	
GRM43	3.5	7.0	3.7	1.0	
GRM52	4.5	8.0	3.2	1.0	
GRM55	4.5	8.0	5.6	1.0	

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a: ±2 gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
  - The material should be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

# GA3 Series Type GB

### IEC60384-14 X2 Class Certified Product

Realized large capacitance value and small size while maintaining high withstand voltages by the multilayer structure.

- Compared with conventional lead type capacitors, this product realized great reductions in size and height, with a volume of 1/10 or less, and height of 1/4 or less.
- This product is only for reflow soldering.

### Specifications

Size (mm)	5.7×5.0mm
Rated Voltage	250Vac
Capacitance	10000pF to 56000pF
Main Applications	AC-DC power supply

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

#### Complement of Test Method

#### 1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

GA3 Series Type GB Specifications and Test Methods (1)

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

Part Number	Dimension (mm)			
Part Number	a	b		
GA355	4.5	8.0	5.6	

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number	Dimension of Pattern (mm)				
Part Number	a	b	С	d	
GA355	4.5	8.0	5.6	1.0	

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
  - The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

## GA3 Series Type GD Specifications and Test Methods (1)

No	lt	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)
1	Appearance		No defects or abnormalities.	Visual inspection.
2	Dimension		Within the specified dimensions.	Using calipers and micrometers.
3	Voltage Proof		No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: AC1500V (r.m.s.) Applied Time: 60±1s Charge/discharge current: 50mA max.
4	Impulse Voltage		No self healing break downs or flash-overs have taken place in the capacitor.	10 impulse of alternating polarity is subjected. (5 impulse for each polarity) The interval between impulse is 60s. Applied Voltage: 2.5kVo-p
5	Insulation Resistance (I.R.)		6000MΩ or more	Measurement Point: Between the terminations Measurement Voltage: DC500±50V Charging Time: 60±5s Measurement Temperature: Room Temperature
6	Capacitance		Shown in Rated value.	
7			C ≥ 30pF: 1000 or more C < 30pF: 400+20C or more C: Nominal Capacitance (pF)	Measurement Temperature: Room Temperature Measurement Frequency: 1.0±0.1MHz Measurement Voltage: AC1.0±0.2V (r.m.s.)
8	Temperature Characteristics of Capacitance		1X: +350 to -1000 ppm/°C (Temp.Range:+20 to +85°C)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3.    Step   Temperature (°C)
		Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate A shown in
	Vibration	Capacitance	Within the specified initial value.	"Complement of Test Method".
9		Q	Within the specified initial value.	Kind of Vibration: A simple harmonic motion 10Hz to 55Hz to 10Hz (1min) Total amplitude: 1.5mm This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).
10	) Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (wt)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 245±5°C Immersion time: 2±0.5s Immersing in speed: 25±2.5mm/s.
		Appearance	No defects or abnormalities.	Test Method: Solder bath method
	Resistance to	Capacitance Change	Within±2.5% or ±0.25pF (Whichever is larger)	Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 260±5°C Immersion time: 10±1s
11	Soldering	I.R.	1000MΩ or more	Immersing in speed: 25±2.5mm/s.
	Heat	Voltage Proof	No defects.	Exposure Time: 24±2h at room condition*.  Preheat: GA342 size: 100 to 120°C for 1min  and 170 to 200°C for 1min
12	Adhesive Strength of Termination		No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate A shown in "Complement of Test Method".  10N, 10±1s  Applied Direction: In parallel with the test substrate and vertical with the capacitor side.
13	Substrate Bending Test		No defects or abnormalities.	Solder the capacitor on the test substrate B shown in "Complement of Test Method".  Then apply the force in the direction shown in "Test Method of Substrate Bending Test" of "Complement of Test Method".  Flexure: 1mm  Holding Time: 5±1s  Soldering Method: Reflow soldering

 $<sup>^{\</sup>star}$  Room Condition: Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmosphere pressure: 86 to 106kPa

### GA3 Series Type GD Specifications and Test Methods (1)

Continued from the preceding page.

#### Complement of Test Method

1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

(1) Test Substrate A

Part Number	Dimension (mm)				
Part Number	a	ь	С		
GA342	3.5	7.0	2.4		

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Doub Niveshou	Dimension of Pattern (mm)				
Part Number	a	b	С	d	
GA342	3.5	7.0	2.4	1.0	

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

### GA3 Series Type GD Specifications and Test Methods (2)

Continued from the preceding page.

#### Complement of Test Method

1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

#### (1) Test Substrate A

Land Dimensions

Part Number	Dimension (mm)						
Part Number	a	ь	С				
GA342	3.5	7.0	2.4				
GA343	3.5	7.0	3.7				

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number	Dimension of Pattern (mm)						
Part Number	a	b	С	d			
GA342	3.5	7.0	2.4	1.0			
GA343	3.5	7.0	3.7	1.0			

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

Size 4.5x2.0mm: This product is applicable only for the instruments certified by EN/IEC60950-1

Size 5.7x2.8mm or 5.7x5.0mm: This product is applicable as X or Y capacitor

#### **Features**

1 International Standard (IEC60384-14) certified product.

Please down load Safety Standard Certification (Type GF: X1/Y2) from here.

2 Can be used as a Class Y2 capacitor.

4 This product is only for reflow soldering.

### Specifications

Size (mm)	4.5×2.0mm to 5.7×5.0mm
Rated Voltage	250Vac
Capacitance	10pF to 4700pF
Main Applications	AC-DC power supply

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

## GA3 Series Type GF Specifications and Test Methods (1)

No	ltem		Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)	
1	Appearance		No defects or abnormalities.	Visual inspection.	
2	Dimension		Within the specified dimensions.	Using calipers and micrometers.	
3	Voltage Proof		No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: AC2000V (r.m.s.) Applied Time: 60±1s Charge/discharge current: 50mA max.	
4	Impulse Voltage		No self healing break downs or flash-overs have taken place in the capacitor.	10 impulse of alternating polarity is subjected. (5 impulse for each polarity) The interval between impulse is 60s. Applied Voltage: 2.5kVo-p	
5	Insulation Resistance (I.R.)		6000M $\Omega$ or more	Measurement Point: Between the terminations Measurement Voltage: DC500±50V Charging Time: 60±5s Measurement Temperature: Room Temperature	
6	Capacitance		Shown in Rated value.	Massurament Temperature, Deem Temperature	
7	Q		C ≥ 30pF: 1000 or more C < 30pF: 400+20C or more C: Nominal Capacitance (pF)	Measurement Temperature: Room Temperature Measurement Frequency: 1.0±0.1MHz Measurement Voltage: AC1.0±0.2V (r.m.s.)	
8	Temperature Characteristics of Capacitance		1X: +350 to -1000 ppm/°C (Temp.Range:+20 to +85°C)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3.    Step   Temperature (°C)     1	
		Appearance	No defects or abnormalities.	Solder the capacitor on the test substrate A shown in	
		Capacitance	Within the specified initial value.	"Complement of Test Method".	
9	Vibration	Q	Within the specified initial value.	Kind of Vibration: A simple harmonic motion 10Hz to 55Hz to 10Hz (1min) Total amplitude: 1.5mm This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).	
10	Solderability		95% of the terminations is to be soldered evenly and continuously.	Test Method: Solder bath method Flux: Solution of rosin ethanol 25 (wt)% Preheat: 80 to 120°C for 10 to 30s Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 245±5°C Immersion time: 2±0.5s Immersing in speed: 25±2.5mm/s.	
		Appearance	No defects or abnormalities.	Test Method: Solder bath method	
	Resistance to	Capacitance Change	Within±2.5% or ±0.25pF (Whichever is larger)	Solder: Sn-3.0Ag-0.5Cu (Lead Free Solder) Solder Temp.: 260±5°C Immersion time: 10±1s	
11	Soldering	I.R.	$1000$ M $\Omega$ or more	Immersing in speed: 25±2.5mm/s.	
	Heat	Voltage Proof	No defects.	Exposure Time: 24±2h at room condition*.  Preheat: GA342 size: 100 to 120°C for 1min  and 170 to 200°C for 1min	
12	Adhesive Strength of Termination		No removal of the terminations or other defect should occur.	Solder the capacitor on the test substrate A shown in "Complement of Test Method".  10N, 10±1s  Applied Direction: In parallel with the test substrate and vertical with the capacitor side.	
13	Substrate Bending Test		No defects or abnormalities.	Solder the capacitor on the test substrate B shown in "Complement of Test Method".  Then apply the force in the direction shown in "Test Method of Substrate Bending Test" of "Complement of Test Method".  Flexure: 1mm  Holding Time: 5±1s  Soldering Method: Reflow soldering	

 $<sup>^{\</sup>star}$  Room Condition: Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmosphere pressure: 86 to 106kPa

## GA3 Series Type GF Specifications and Test Methods (1)

Continued from the preceding page.

#### Complement of Test Method

1. Test Substrate

The test substrate should be Substrate A or Substrate B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering

Solder: Sn-3.0Ag-0.5Cu

(1) Test Substrate A

Part Number	Dimension (mm)			
Part Number	a	ь	С	
GA342	3.5	7.0	2.4	

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of Copper Foil: 0.035mm

#### (2) Test Substrate B

Part Number	Dimension of Pattern (mm)			
Part Number	a	b	С	d
GA342	3.5	7.0	2.4	1.0

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
  - The material should be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

#### (2) Test Substrate B

Part Number	Dimension of Pattern (mm)						
Part Number	a	b	С	d			
GA342	3.5	7.0	2.4	1.0			
GA352	4.5	8.0	3.2	1.0			
GA355	4.5	8.0	5.6	1.0			

- Material: Glass Epoxy Board
- Thickness of Copper Foil: 0.035mm

#### 2. Test Method of Substrate Bending Test

(a) Support State

(b) Test State

- a:  $\pm 2$  gap between support stand center and test stand
- b: ±5 gap between support stand center and test stand center
- Material of Test Stand and Pressure Stick
- The material shoud be a metal where a remarkable transformation and the distortion are not caused even if it is pressurized.
- Pressurizing Speed
  - The pressurizing speed is pressurized at the speed of about 1mm/s until the flexure reaches a regulated value.

## **LLL Series**

This low ESL capacitor is ideal for power supply decoupling of high-speed operation electronic equipment.

#### **Features**

#### (1) Low ESL

Since the equivalent series inductance (ESL) is low and excellent in high frequency characteristics, this capacitor is suitable for power supply decoupling of high-speed operation electronic equipment.

<Example of Structure>

## Contributes to a reduction in the number of components.

The number of components can be reduced by using low ESL capacitors, while maintaining functions equivalent to general purpose capacitors (GRM Series).

## A maximum operating temperature up to 125°C

We also offer an abundant lineup of X7\* characteristics that can be used in high temperature locations, such as IC packages.

#### Specifications

Size (mm)	0.5×1.0mm to 1.6×3.2mm
Rated Voltage	2.5Vdc to 50Vdc
Capacitance	2200pF to 10μF
Main Applications	Application processor/CPU/GPU

This catalog contains only a portion of the product lineup. Please refer to the capacitor search tool on the Murata Web site for details.

8 Terminals Low ESL Chip Multilayer Ceramic Capacitors for General Purpose

## LLA Series

## 8-Terminal Type Low ESL Capacitor Ideal for Power Supply Decoupling of High-speed Operation IC

#### **Features**

#### Ultra-low ESL

Since the equivalent series inductance (ESL) is very low with excellent high frequency characteristics due to the design structure, this capacitor is ideal for power supply decoupling of high-speed operation IC.

<Example of Structure>

Since the current is the reverse direction, the ESL becomes lower with mutual inductance. The current flows into the adjacent electrode, which reduces the current loop and lowers the ESL.

<Effectiveness of Cancelling Out Inductance by Mutual Inductance>

<Effectiveness of Suppressing Inductance when Mounting a Multi-terminal Capacitor>

The inductance for the boards also becomes lower, not only the capacitor.

## A maximum operating temperature up to 125°C

This product is applicable to high temperatures (X7\* characteristics); however, Murata also offers numerous thin type products, which are ideal as decoupling capacitors on IC package.

#### Specifications

Size (mm)	1.6×0.8mm to 2.0×1.25mm
Rated Voltage	4Vdc to 25Vdc
Capacitance	10000pF to 4.7μF
Main Applications	Application processor/CPU/GPU

This catalog contains only a portion of the product lineup. Please refer to the capacitor search tool on the Murata Web site for details.

10 Terminals Low ESL Chip Multilayer Ceramic Capacitors for General Purpose

## LLM Series

## 10-Terminal Type Low ESL Capacitor Ideal for Power Supply Decoupling of High-speed Operation IC

#### **Features**

#### This is the lowest ESL LW reversed type capacitor.

Since the equivalent series inductance (ESL) of this product is even lower than the LLA series (8-terminal product) with excellent high frequency characteristics, this capacitor is ideal for power supply decoupling of high-speed operation IC.

<Effectiveness of Cancelling Out Inductance by Mutual Inductance>

<Effectiveness of Suppressing Inductance when Mounting a Multi-terminal Capacitor>

The inductance for the boards also becomes lower, not only the capacitor.

## A maximum operating temperature up to 125°C

This product is applicable to high temperatures (X7\* characteristics); however, Murata also offers numerous thin type products, which are ideal as decoupling capacitors on IC package.

#### Specifications

Size (mm)	2.0×1.25mm
Rated Voltage	4Vdc to 25Vdc
Capacitance	0.22μF to 1.0μF
Main Applications	Application processor/CPU/GPU

This catalog contains only a portion of the product lineup. Please refer to the capacitor search tool on the Murata Web site for details.

LW Reversed Controlled ESR Low ESL Chip Multilayer Ceramic Capacitors for General Purpose

# LLR Series

## ESR Controlled Type Low ESL Capacitors Equipped with Anti-resonance Control **Function**

#### **Features**

#### Reduces Anti-resonance

This capacitor is controlled so that the equivalent series resistance (ESR) becomes slightly higher, and is effective in reducing the anti-resonance that occurs when capacitor arrays are used.

## Lineup of capacitors with ESR values from 100-1,000m $\Omega$ .

According to the conditions of the anti-resonance, the most suitable ESR value can be selected from 4 types.

#### Low ESL

This ESR controlled type capacitor has excellent high frequency characteristics, with low equivalent series inductance (ESL). This is also ideal as a decoupling component.

#### Specifications

Size (mm)	0.8×1.6mm
Rated Voltage	4Vdc
Capacitance	1.0µF
Main Applications	Network processor/ASIC/PMIC

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details

3 Terminals Low ESL Chip Multilayer Ceramic Capacitors for General Purpose

## NFM Series

This is the most suitable Low ESL capacitors for noise measurement and power decoupling of highspeed electrical devices.

#### **Features**

#### **(1)** Low ESL

Since the equivalent series inductance (ESL) is low and excellent in high frequency characteristics, this capacitor is suitable for power supply decoupling of high-speed operation electronic equipment.

2-terminal Capacitor

Realizes Ultra low ESL by using a extremely shorter high frequency current path

- × long current distance
- X Narrow wiring width GND

• 3-terminal capacitor

- Short current distance
- O Wide wiring width
- O Four routes formed in parallel

## Contributes to a reduction in the number of components.

The number of components can be reduced by using low ESL capacitors, while maintaining functions equivalent to 2-terminal capacitor.

2-terminal capacitor 100pcs

3-terminal capacitor 32pcs

## Contributes to noise suppression

Example of noise suppression effect

#### Specifications

Size (mm)	1.0×0.5mm to 4.5×1.6mm
Rated Voltage	2.5Vdc to 100Vdc
Capacitance	100pF to 27µF
Main Applications	For decoupling and smoothing circuits, For noise suppression

Metal Terminal Type Multilayer Ceramic Capacitors for General Purpose

## KRM Series

## Bonding the metal terminals to external electrodes solves design issues by mounting large size MLCC!

#### **Features**

Bond metal terminals to the external electrodes of chips.

The stress applied to the chip is relieved by the elastic action of the metal terminal.

Reduces stress by the elastic action of the metal terminals!

2 Substantially reduces noise, board deflection cracks and soldering cracks.

This product is not damaged even with a board deflection of 6 mm. Solder cracks do not occur even with 2,000 cycles of heat stress.

#### Acoustic Noise is Reduced with Metal Terminals

#### Suppresses Solder Cracks Caused by Heat Stress

Test Condition: -55 to +125°C, 5min.,(Liquid Phase) Board Used: Glass Epoxy Board (FR-4)

Demonstrates replacement value of low noise capacitors Experience the effectiveness of the KRM Series. WEB \ Examples of Noise Countermeasures

High Effective Capacitance & High Allowable Ripple Current Metal Terminal Type Multilayer Ceramic Capacitors for General Purpose

## **KR3 Series**

# Bonding the metal terminals to external electrodes solves design issues by mounting large size MLCC!

#### **Features**

#### 1 Bond Metal Terminals to External Electrodes of Chips

This product has high resistance to heat and mechanical impact and greatly reduces acoustic noise of boards by ceramics.

Reduces stress by the elastic action of the metal terminals!

#### 2 Stacking of Chips

Achieve high capacity by stacking 2 capacitors.

#### Comparison of Noise Reduction Effects

Evaluation Items: 5750 (in mm)/2220 (in inch) size/DC630V/220nF Test Method: DC50V, AC10Vp-p/3kHz Test Board: Glass Epoxy Board (T=1.6mm) Test Quantity: 3pc Distance Between Microphone and Board: 3mm

Note: Results Using Murata's Evaluation Board

#### Reduces Stress Caused by Board Deflection

#### Suppresses Solder Cracks Caused by Heat Stress

Chip Size	Chip Only (5750 (in mm)/2220 (in inch) size)	Metal Terminal Type (5750 (in mm)/2220 (in inch) size)
1000 Cycle	ĵĵSolder Crack	
2000 Cycle	∬Solder Crack	

Test Condition: -55 to +125°C, 5min., (Liquid Phase) Board Used: Glass Epoxy Board (FR-4) Compared with chips only, this product is excellent in solder cracking resistance.

#### (3) **Adopted Low Dielectric Constant Materials**

Improved effective capacity and ripple resistant performance, compared to conventional products (X7R characteristics).

#### Specifications

Size (mm)	6.1×5.3mm
Rated Voltage	250Vdc to 630Vdc
Capacitance	0.10μF to 2.2μF
Main Applications	For DC-DC converters of general electronic equipment

This catalog contains only a portion of the product lineup. Please refer to the capacitor search tool on the Murata Web site for details.

## KR3 Series Specifications and Test Methods (1)

		_				
No			Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)		
1	Operating Ter	mperature	-55 to +125°C			
2	Appearance Dimension		No defects or abnormalities	Visual inspection.		
4	4 Dielectric Strength		Within the specified dimension.  No defects or abnormalities.	Using calipers and micrometers.  No failure should be observed when voltage in the table is applied between the terminations for 1 to 5s, provided the charge/discharge current is less than 50mA.  Rated Voltage  DC250V  200% of the rated voltage  DC450V  150% of the rated voltage  DC630V  120% of the rated voltage		
5	Insulation Res	sistance (I.R.)	More than 10000MΩ or 100MΩ • μF (Whichever is smaller)	The insulation resistance should be measured with DC500±50V (DC250±25V in case of rated voltage: DC250V, DC450V) andwithin 60±5s of charging.		
6	Capacitance		Within the specified tolerance.	Capacitance should be measured at the frequency of 1±0.2kHz and a voltage of AC1.0±0.2V (r.m.s.).		
7	Dissipation Factor (D.F.)		0.01 max.	D.F. should be measured at the frequency of 1±0.2kHz and a voltage of AC1.0±0.2V (r.m.s.).		
8	Capacitance Temperature Characteristics		Cap. change within +22/-33% (Temp.Range: -55 to +125°C)	The capacitance measurement should be made at each step specified in the table.  • Pretreatment Perform the heat treatment at 150+0/-10°C for 60±5min and then let sit for 24±2h at room condition*.   Step Temperature (°C)  1 25±2 2 Min. Operating Temp. ±3 3 25±2 4 Max. Operating Temp. ±3 5 25±2		
		Appearance	No defects or abnormalities.	Solder the capacitor to the Test Jig A (glass epoxy board) shown		
9	Capacitance		Within the specified tolerance.  Pass the item No.7.	in "Complement of Test Method".  The capacitor should be subjected to a simple harmonic motion having a total amplitude of 1.5mm, the frequency being varied uniformly between the approximate limits of 10 and 55Hz.  The frequency range, from 10 to 55Hz and return to 10Hz, should be traversed in approximately 1min.  This motion should be applied for a period of 2h in each of 3 mutually perpendicular directions (total of 6h).		
10	O Solderability of Termination		The metal surface is soldered well.	Reflow Soldering: Peak 260+0/-5°C The area of soldering 230°C min., 20 to 40s Let sit for 24±2h at room condition*, then measure.  • Pretreatment Perform the heat treatment at 150+0/-10°C for 60±5min and then let sit for 24±2h at room condition*.  300°C- 200°C- 150°C 100°C-		
		Appearance	No marking defects.			
	Resistance	Capacitance Change	Within ±10%	Reflow Soldering • See Item 10 Solderability of termination In a soldering iron case		
11	to Soldering	D.F.	Pass the item No.7.	Temp. of solder: 350±10°C		
	Heat	I.R.	Pass the item No.5.	Solder time: 4+1/-0 s  Let sit for 24±2h at room condition*, then measure.		
		Dielectric Strength	Pass the item No.4.	Let sit for 24±2h at room condition*, then measure.  Please refer to "A Caution 4-3. Correction of Soldered Portion"		

 $<sup>{\</sup>rm * Room\ Condition:\ Temperature:\ 15\ to\ 35°C,\ Relative\ humidity:\ 45\ to\ 75\%,\ Atmosphere\ pressure:\ 86\ to\ 106kPa}$

## KR3 Series Specifications and Test Methods (1)

Continued from the preceding page.

#### Complement of Test Method

Test Jig

The test jig should be Jig A or Jig B as described in "Specifications and Test Methods".

The specimen should be soldered by the conditions as described below.

Soldering Method: Reflow soldering Thickness of Metal-mask: 200µm

Solder: Sn-3.0Ag-0.5Cu

(1) Test Jig A

:
.6

- Material: Glass Epoxy Board
- Thickness: 1.6mm
- Thickness of copper foil: 0.035mm

#### (2) Test Jig B

- Material: Glass Epoxy Board
- $\bullet \ Thickness \ of \ copper \ foil: 0.035mm$

Wire Bonding Mount Multilayer Microchip Capacitors for General Purpose

## GMA Series

## These capacitors have gold-plated electrodes and are designed specifically for wire bonding.

#### **Features**

## Allows for high density mounting.

Noise can be reduced by eliminating the routing of the wire, and high efficiency can be achieved with a built-in capacitor in a package, such as IC. Miniaturization of the set is also possible.

Achieved small size and high capacitance with a multilayer structure.

 $Lineup\ comparison\ table\ with\ competitor's\ is\ provided\ in\ my\ Murata\ Capacitor\ Site\ (need\ to\ sign\ in\ \&\ approval\ from\ the\ site)$ 

WEB 1

#### Ideal for bypass applications

Especially for optical communication related devices such as TOSA/ROSA.

## Excellent in high frequency characteristics.

Since the capacitor consists of an upper/lower electrode structure, the current path becomes shorter and lowers the ESL. Compared with the general purpose GRM series of the same capacity, the impedance of this product becomes lower at high frequencies.

## GMA Series Specifications and Test Methods (1)

No	lte	em	Specification	Test Method (Ref. Standard: JIS C 5101, IEC60384)
1	L Rated Voltage		Shown in Rated value.	The rated voltage is defined as the maximum voltage which may be applied continuously to the capacitor.  When AC voltage is superimposed on DC voltage, V <sup>p-p</sup> or V <sup>o-p</sup> , whichever is larger, should be maintained within the rated voltage range.
2	Appearance		No defects or abnormalities.	Visual inspection.
3	Dimension		Within the specified dimensions.	Using Measuring instrument of dimension.
4	Voltage Proof		No defects or abnormalities.	Measurement Point: Between the terminations Test Voltage: 250% of the rated voltage Applied Time: 1 to 5s Charge/discharge current: 50mA max.
5	Insulation Res	istance (I.R.)	More than $2000 \text{M}\Omega$ or $50\Omega$ • F (Whichever is smaller)	Measurement Point: Between the terminations Measurement Voltage: DC Rated Voltage Charging Time: 1min Charge/discharge current: 50mA max. Measurement Temperature: Room Temperature
6	Capacitance		Shown in Rated value.	Measurement Temperature: Room Temperature
7	Dissipation Fa	ctor (D.F.)	0.1 max.	Capacitance         Frequency         Voltage           C ≤ 10µF         1.0±0.1kHz         0.5±0.1Vrms
8	Temperature Characteristics of Capacitance	No Bias	B3: Within ±10% (-25 to +85°C) R6: Within ±15% (-55 to +85°C) C8: Within ±22% (-55 to +105°C)	The capacitance change should be measured after 5 minutes at each specified temp. stage.  Capacitance value as a reference is the value in step 3.  Step Temperature (°C) Applying Voltage (VDC)  1 Reference Temp. ±2 2 Min. Operating Temp. ±3 3 Reference Temp. ±2 4 Max. Operating Temp. ±3 5 Reference Temp. ±2  • Initial measurement  Perform a heat treatment at 150+0/-10°C for 1h and then let sit for 24±2h at room temperature, then measure.
9	Adhesive Strength of Termination	Bond Strength	Pull force: 0.03N min.	MIL-STD-883 Method 2011 Condition D  Mount the capacitor on a gold metalized alumina substrate with Au-20Sn and bond a ø25µm (ø0.001 inch) gold wire to the capacitor terminal using an ultrasonic ball bond. Then, pull wire.  MIL-STD-883 Method 2019
		Die Shear Strength	Die Shear force: 2N min.	Mount the capacitor on a gold metalized alumina substrate with Au-20Sn. Apply the force parallel to the substrate.
		Appearance	No defects or abnormalities.	Kind of Vibration: A simple harmonic motion
10	Vibration	Capacitance	Within the specified initial value.	10Hz to 55Hz to 10Hz (1min) Total amplitude: 1.5mm
	×	D.F.	Within the specified initial value.	This motion should be applied for a period of 2h in each 3 mutually perpendicular directions (total of 6h).
		Appearance	No defects or abnormalities.	Perform the five cycles according to the four heat treatments
		Capacitance Change	Within ±7.5%	shown in the following table.  Step Temp. (°C) Time (min)
	Temperature	D.F.	Within the specified initial value.	1 Min. Operating Temp. +0/-3 30±3 2 Room Temp. 2 to 3
11	Sudden Change	I.R.	Within the specified initial value.	3 Max. Operating Temp. +3/-0 30±3
	Change *	Voltage Proof	No defects.	4 Room Temp. 2 to 3  Exposure Time: 24±2h Initial measurement Perform a heat treatment at 150+0/-10°C for 1h and then let sit for 24±2h at room temperature, then measure.

Wire Bonding/AuSn Soldering Mount Chip Multilayer Ceramic Capacitors for General Purpose

## GMD Series

These capacitors have gold-plated electrodes and are designed specifically for wire bonding and use of gold-tin (AuSn) solder.

#### **Features**

Designed specifically for wire bonding and use of gold-tin (AuSn) solder.

The gold-plated external electrodes make these devices suitable for wire bonding or use of gold tin (AuSn) solder.

<sup>\*</sup>This product is suitable only for wire bonding or use of gold-tin (AuSn) solder. Other mounting methods should not be used.

Ideal for mounting in packages, such as optical communication related devices, IC and etc.

Noise can be reduced by eliminating the routing of the wire, and high efficiency can be achieved with a built-in capacitor in the package, such as TO-CAN, IC and etc. by wire bonding mounting.

Contributes to the miniaturization of the set.

Murata offers a lineup of small size products, such as the 0603 (0201) and 1005 (0402) in mm (inch).

## Specifications

Size (mm)	0.6×0.3mm to 1.0×0.5mm
Rated Voltage	6.3Vdc to 50Vdc
Capacitance	100pF to 1.0μF
Main Applications	Various device related, such as GaAsIC (mounted in IC packages)

This catalog contains only a portion of the product lineup.

Please refer to the capacitor search tool on the Murata Web site for details.

		Capacitance Change	Within ±12.5%	Test Time: 1000±12h Applied Voltage: 120% of the rated voltage Charge/discharge current: 50mA max.
13	Durability	D.F.	0.2 max.	Initial measurement
13	*2	I.R.	More than $1000 \text{M}\Omega$ or $25 \Omega$ • F (Whichever is smaller)	Perform a heat treatment at 150+0/-10°C for 1h and then let sit for 24±2h at room temperature, then measure.  • Measurement after test Perform a heat treatment at 150+0/-10°C for 1h and then let sit for 24±2h at room temperature, then measure.

\*2 Mounting for testing: The capacitors should be mounted on the substrate as shown below using die bonding and wire bonding when tests No.10 to 13 are performed.

Recommended derating conditions on voltage and temperature

These Part Numbers are designed for use in the circuits where continuous applied voltage to the capacitor is derated than rated voltage, and guarantee Durability Test with 120% × rated voltage as testing voltage at the maximum operating temperature.

The voltage and temperature derating conditions on the upside are recommended for use to ensure the same reliability level as normal specification.

## **△**Caution

## **Storage and Operation Conditions**

- The performance of chip multilayer ceramic capacitors and chip EMIFIL NFM series (henceforth just "capacitors") may be affected by the storage conditions.
   Please use them promptly after delivery.
  - 1-1. Maintain appropriate storage for the capacitors using the following conditions: Room Temperature of +5 to +40°C and a Relative Humidity of 20 to 70%. High temperature and humidity conditions and/or prolonged storage may cause deterioration of the packaging materials. If more than six months have elapsed since delivery, check packaging, mounting, etc. before use.

In addition, this may cause oxidation of the electrodes. If more than one year has elapsed since delivery, also check the solderability before use.

- 1-2. Corrosive gas can react with the termination (external) electrodes or lead wires of capacitors, and result in poor solderability. Do not store the capacitors in an atmosphere consisting of corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas, etc.).
- 1-3. Due to moisture condensation caused by rapid humidity changes, or the photochemical change caused by direct sunlight on the terminal electrodes and/or the resin/epoxy coatings, the solderability and electrical performance may deteriorate. Do not store capacitors under direct sunlight or in high humidity conditions.

## Rating

## 1. Temperature Dependent Characteristics

- The electrical characteristics of a capacitor can change with temperature.
  - 1-1. For capacitors having larger temperature dependency, the capacitance may change with temperature changes.

The following actions are recommended in order to ensure suitable capacitance values.

(1) Select a suitable capacitance for the operating temperature range.

(2) The capacitance may change within the rated temperature.

When you use a high dielectric constant type capacitor in a circuit that needs a tight (narrow) capacitance tolerance (e.g., a time-constant circuit), please carefully consider the temperature characteristics, and carefully confirm the various characteristics in actual use conditions and the actual system.

## 2. Measurement of Capacitance

- 1. Measure capacitance with the voltage and frequency specified in the product specifications.
  - 1-1. The output voltage of the measuring equipment may decrease occasionally when capacitance is high.

    Please confirm whether a prescribed measured voltage is impressed to the capacitor.
- 1-2. The capacitance values of high dielectric constant type capacitors change depending on the AC voltage applied. Please consider the AC voltage characteristics when selecting a capacitor to be used in an AC circuit.

Continued on the following page. 🖊

Continued from the preceding page.

## 3. Applied Voltage and Applied Current

- 1. Do not apply a voltage to the capacitor that exceeds the rated voltage as called out in the specifications.
  - 1-1. Applied voltage between the terminals of a capacitor shall be less than or equal to the rated voltage.
    - (1) When AC voltage is superimposed on DC voltage, the zero-to-peak voltage shall not exceed the rated DC voltage.
      - When AC voltage or pulse voltage is applied, the peak-to-peak voltage shall not exceed the rated DC voltage.
    - (2) Abnormal voltages (surge voltage, static electricity, pulse voltage, etc.) shall not exceed the rated DC voltage.

Typical Voltage Applied to the DC Capacitor

DC Voltage	DC Voltage+AC	AC Voltage	Pulse Voltage
E	E	0	E

(E: Maximum possible applied voltage.)

#### 1-2. Influence of over voltage

Over voltage that is applied to the capacitor may result in an electrical short circuit caused by the breakdown of the internal dielectric layers. The time duration until breakdown depends on the applied voltage and the ambient temperature.

 Use a safety standard certified capacitor in a power supply input circuit (AC filter), as it is also necessary to consider the withstand voltage and impulse withstand voltage defined for each device.

## 4. Type of Applied Voltage and Self-heating Temperature

 Confirm the operating conditions to make sure that no large current is flowing into the capacitor due to the continuous application of an AC voltage or pulse voltage.

When a DC rated voltage product is used in an AC voltage circuit or a pulse voltage circuit, the AC current or pulse current will flow into the capacitor; therefore check the self-heating condition.

Please confirm the surface temperature of the capacitor so that the temperature remains within the upper limits of the operating temperature, including the rise in temperature due to self-heating. When the capacitor is used with a high-frequency voltage or pulse voltage, heat may be generated by dielectric loss.

## <Applicable to Rated Voltage of less than 100VDC>

1-1. The load should be contained so that the self-heating of the capacitor body remains below 20°C, when measuring at an ambient temperature of 25°C.

#### <Applicable to NFM Series>

3. The capacitors also have rated currents.
The current flowing between the terminals of a capacitor shall be less than or equal to the rated current. Using the

capacitor beyond this range could lead to excessive heat.

[Example of Temperature Rise (Heat Generation) in Chip Multilayer Ceramic Capacitors in Contrast to Ripple Current]

## **1** Caution

Continued from the preceding page.

## <Applicable to Temperature Characteristics X7R (R7), X7T (D7), X7T (W0) beyond Rated Voltage of 200VDC>

1-2. The load should be contained so that the self-heating of the capacitor body remains below 20°C, when measuring at an ambient temperature of 25°C. In addition, use a K thermocouple of ø0.1mm with less heat capacity when measuring, and measure in a condition where there is no effect from the radiant heat of other components or air flow caused by convection. Excessive generation of heat may cause deterioration of the characteristics and reliability of the capacitor. (Absolutely do not perform measurements while the cooling fan is operating, as an accurate measurement may not be performed.)

## <Applicable to Temperature Characteristics U2J (7U), C0G (5C) beyond Rated Voltage of 200VDC>

1-3. Since the self-heating is low in the low loss series, the allowable power becomes extremely high compared to the common X7R (R7) characteristics. However, when a load with self-heating of 20°C is applied at the rated voltage, the allowable power may be exceeded. When the capacitor is used in a high-frequency voltage circuit of 1kHz or more, the frequency of the applied voltage should be less than 500kHz sine wave (less than 100kHz for a product with rated voltage of DC3.15kV), to limit the voltage load so that the load remains within the derating shown in the following figure. In the case of non-sine wave, high-frequency components exceeding the fundamental frequency may be included. In such a case, please contact Murata. The excessive generation of heat may cause deterioration of the characteristics and reliability of the capacitor. (Absolutely do not perform measurements while the cooling fan is operating, as an accurate measurement may not be performed.)

Continued on the following page. 🖊

GMA

## **A**Caution

Continued from the preceding page.

## 5. DC Voltage and AC Voltage Characteristics

- The capacitance value of a high dielectric constant type capacitor changes depending on the DC voltage applied.
   Please consider the DC voltage characteristics when a capacitor is selected for use in a DC circuit.
  - 1-1. The capacitance of ceramic capacitors may change sharply depending on the applied voltage (see figure). Please confirm the following in order to secure the capacitance.
    - Determine whether the capacitance change caused by the applied voltage is within the allowed range.
    - (2) In the DC voltage characteristics, the rate of capacitance change becomes larger as voltage increases, even if the applied voltage is below the rated voltage. When a high dielectric constant type capacitor is used in a circuit that requires a tight (narrow) capacitance tolerance (e.g., a time constant circuit), please carefully consider the voltage characteristics, and confirm the various characteristics in the actual operating conditions of the system.
- 2. The capacitance values of high dielectric constant type capacitors changes depending on the AC voltage applied. Please consider the AC voltage characteristics when selecting a capacitor to be used in an AC circuit.

## 6. Capacitance Aging

The high dielectric constant type capacitors have an
Aging characteristic in which the capacitance value
decreases with the passage of time.
When you use high dielectric constant type capacitors in
a circuit that needs a tight (narrow) capacitance
tolerance (e.g., a time-constant circuit), please carefully
consider the characteristics of these capacitors, such as
their aging, voltage, and temperature characteristics. In
addition, check capacitors using your actual appliances at
the intended environment and operating conditions.

Continued on the following page. 🖊

LΕΑ

XΩX

KR3

Continued from the preceding page.

#### 7. Vibration and Shock

- Please confirm the kind of vibration and/or shock, its condition, and any generation of resonance.
   Please mount the capacitor so as not to generate resonance, and do not allow any impact on the terminals.
- 2. Mechanical shock due to being dropped may cause damage or a crack in the dielectric material of the capacitor.
  - Do not use a dropped capacitor because the quality and reliability may be deteriorated.
- 3. When printed circuit boards are piled up or handled, the corner of another printed circuit board should not be allowed to hit the capacitor, in order to avoid a crack or other damage to the capacitor.

## **Soldering and Mounting**

## 1. Mounting Position

- 1. Confirm the best mounting position and direction that minimizes the stress imposed on the capacitor during flexing or bending the printed circuit board.
  - 1-1. Choose a mounting position that minimizes the stress imposed on the chip during flexing or bending of the board.

### <Applicable to NFM Series>

If you mount the capacitor near components that generate heat, take note of the heat from the other components and carefully check the self-heating of the capacitor before using.

If there is significant heat radiation from other components, it could lower the insulation resistance of the capacitor or produce excessive heat.

## [Component Direction]

Locate chip horizontal to the direction in which stress acts.

## [Chip Mounting Close to Board Separation Point]

It is effective to implement the following measures, to reduce stress in separating the board.

It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D *1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

 $^{\star}1~{\rm A} > {\rm D}$  is valid when stress is added vertically to the perforation as with Hand Separation.

If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid

## [Mounting Capacitors Near Screw Holes]

When a capacitor is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the capacitor in a position as far away from the screw holes as possible.

GA2

 $\exists$ 

KR3

## **(!)**Caution

Continued from the preceding page.  $\searrow$ 

## 2. Information before Mounting

- 1. Do not re-use capacitors that were removed from the equipment.
- 2. Confirm capacitance characteristics under actual applied
- 3. Confirm the mechanical stress under actual process and equipment use.
- 4. Confirm the rated capacitance, rated voltage and other electrical characteristics before assembly.
- 5. Prior to use, confirm the solderability of capacitors that were in long-term storage.
- 6. Prior to measuring capacitance, carry out a heat treatment for capacitors that were in long-term storage.
- 7. The use of Sn-Zn based solder will deteriorate the reliability of the MLCC. Please contact our sales representative or product engineers on the use of Sn-Zn based solder in advance.
- 8. We have also produced a DVD which shows a summary of our recommendations, regarding the precautions for mounting. Please contact our sales representative to request the DVD.

## 3. Maintenance of the Mounting (pick and place) Machine

- 1. Make sure that the following excessive forces are not applied to the capacitors. Check the mounting in the actual device under actual use conditions ahead of time.
  - 1-1. In mounting the capacitors on the printed circuit board, any bending force against them shall be kept to a minimum to prevent them from any damage or cracking. Please take into account the following precautions and recommendations for use in your process.
    - (1) Adjust the lowest position of the pickup nozzle so as not to bend the printed circuit board.
- 2. Dirt particles and dust accumulated in the suction nozzle and suction mechanism prevent the nozzle from moving smoothly. This creates excessive force on the capacitor during mounting, causing cracked chips. Also, the locating claw, when worn out, imposes uneven forces on the chip when positioning, causing cracked chips. The suction nozzle and the locating claw must be maintained, checked, and replaced periodically.

## <Applicable to ZRB Series>

- 3. To adjust the inspection tolerance for automated appearance sorting machine of mounting position, because ZRB series are easier to shift the mounting position than standard MLCC.
- 4. To check the overturn and reverse of chip.
- 5. To control mounting speed carefully, because ZRB series is heavier than standard MLCC.

Continued on the following page. 🖊

Continued from the preceding page.

#### 4-1. Reflow Soldering

- 1. When sudden heat is applied to the components, the mechanical strength of the components will decrease because a sudden temperature change causes deformation inside the components. In order to prevent mechanical damage to the components, preheating is required for both the components and the PCB. Preheating conditions are shown in table 1. It is required to keep the temperature differential between the solder and the components surface ( $\Delta T$ ) as small as possible.
- 2. When components are immersed in solvent after mounting, be sure to maintain the temperature difference ( $\Delta T$ ) between the component and the solvent within the range shown in table 1.

Table 1

Series	Chip Dimension Code (L/W)	Temperature Differential	
GRM/GJM/GQM/GR3/ GRJ/KRM/LLR/NFM/GR7	02/03/15/18/21/31	AT<10000	
LLL	02/03/15/18/1U/21/31	ΔT≦190°C	
ZRB	15/18		
GR3/GRJ/GRM/KR3/KRM GA2/GA3/GR4	32/42/43/52/55	AT<12000	
LLA/LLM	18/21/31	ΔT≦130°C	
GQM	22		

## **Recommended Conditions**

	Pb-Sn Solder	Lead Free Solder
Peak Temperature	230 to 250°C	240 to 260°C
Atmosphere	Air	Air or N2

Pb-Sn Solder: Sn-37Pb Lead Free Solder: Sn-3.0Ag-0.5Cu

- 3. When a capacitor is mounted at a temperature lower than the peak reflow temperature recommended by the solder manufacturer, the following quality problems can occur. Consider factors such as the placement of peripheral components and the reflow temperature setting to prevent the capacitor's reflow temperature from dropping below the peak temperature specified. Be sure to evaluate the mounting situation beforehand and verify that none of the following problems occur.
  - Drop in solder wettability
  - Solder voids
  - Possible occurrence of whiskering
  - Drop in bonding strength
  - Drop in self-alignment properties
  - Possible occurrence of tombstones and/or shifting on the land patterns of the circuit board

Temperature
Incase of Lead Free Solder
( ): In case of Pb-Sn Solder

## [Allowable Reflow Soldering Temperature and Time]

In the case of repeated soldering, the accumulated soldering time must be within the range shown above.

## **A**Caution

Continued from the preceding page.

- 4. Optimum Solder Amount for Reflow Soldering
  - 4-1. Overly thick application of solder paste results in a excessive solder fillet height.
    - This makes the chip more susceptible to mechanical and thermal stress on the board and may cause the chips to crack.
  - 4-2. Too little solder paste results in a lack of adhesive strength on the termination, which may result in chips breaking loose from the PCB.
  - 4-3. Please confirm that solder has been applied smoothly to the termination.

## <Applicable to NFM Series>

## Inverting the PCB

Make sure not to impose any abnormal mechanical shocks to the PCB.

Continued on the following page. 7

Continued from the preceding page.  $\searrow$ 

## 4-2. Flow Soldering

1. Do not apply flow soldering to chips not listed in table 2.

Table 2

Series	Chip Dimension Code (L/W)	Temperature Differential
GR3/GRM	18/21/31	
GQM	18/21	
LLL	21/31	ΔΤ≦150°C
GRJ	18/21/31	
NFM	3D/31/41	

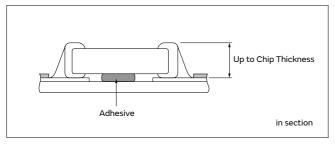

- 2. When sudden heat is applied to the components, the mechanical strength of the components will decrease because a sudden temperature change causes deformation inside the components. In order to prevent mechanical damage to the components, preheating is required for both of the components and the PCB. Preheating conditions are shown in table 2. It is required to keep the temperature differential between the solder and the components surface (ΔT) as low as possible.
- Excessively long soldering time or high soldering temperature can result in leaching of the terminations, causing poor adhesion or a reduction in capacitance value due to loss of contact between the inner electrodes and terminations.
- 4. When components are immersed in solvent after mounting, be sure to maintain the temperature differential ( $\Delta T$ ) between the component and solvent within the range shown in the table 2.

#### **Recommended Conditions**

	Pb-Sn Solder	Lead Free Solder
Preheating Peak Temperature	90 to 110°C	100 to 120°C 140 to 160°C ( <b>NFM</b> )
Soldering Peak Temperature	240 to 250°C	250 to 260°C
Atmosphere	Air	Air or N2

Pb-Sn Solder: Sn-37Pb Lead Free Solder: Sn-3.0Ag-0.5Cu

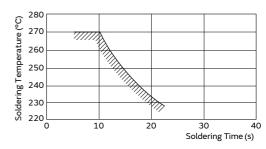

- 5. Optimum Solder Amount for Flow Soldering
  - 5-1. The top of the solder fillet should be lower than the thickness of the components. If the solder amount is excessive, the risk of cracking is higher during board bending or any other stressful condition.

## [Example of Temperature Conditions for Flow Soldering]

## [Allowable Flow Soldering Temperature and Time]

In the case of repeated soldering, the accumulated soldering time must be within the range shown above.

## **A**Caution

Continued from the preceding page.

## 4-3. Correction of Soldered Portion

When sudden heat is applied to the capacitor, distortion caused by the large temperature difference occurs internally, and can be the cause of cracks. Capacitors also tend to be affected by mechanical and thermal stress depending on the board preheating temperature or the soldering fillet shape, and can be the cause of cracks. Please refer to "1. PCB Design" or "3. Optimum solder amount" for the solder amount and the fillet shapes.

Do not correct with a soldering iron for ZRB series. Correction with a soldering iron for ZRB series may cause loss suppress acoustic noise, because the solder amount become excessive.

- 1. Correction with a Soldering Iron
  - 1-1. In order to reduce damage to the capacitor, be sure to preheat the capacitor and the mounting board. Preheat to the temperature range shown in Table 3. A hot plate, hot air type preheater, etc. can be used for preheating.
  - 1-2. After soldering, do not allow the component/PCB to cool down rapidly.
  - 1-3. Perform the corrections with a soldering iron as quickly as possible. If the soldering iron is applied too long, there is a possibility of causing solder leaching on the terminal electrodes, which will cause deterioration of the adhesive strength and other problems.

Table 3

Series	Chip Dimension Code (L/W)	Temperature of Soldering Iron Tip	Preheating Temperature	Temperature Differential (ΔT)	Atmosphere
GJM/GQM/GR3/GRJ/GRM/GR7	03/15/18/21/31	350°C max.	150°C min.	ΔΤ≦190°C	Air
GRJ/GRM/GR4/GA2/GA3	32/42/43/52/55	280°C max.	150°C min.	ΔΤ≦130°C	Air
GQM	22	280°C IIIdx.	150 C IIIII.		All
NFM	3D/41	350°C max.	150°C min.	ΔΤ≦190°C	Air
	15	340°C max.	130 € 111111.	Δ1=190°C	"

<sup>\*</sup>Applicable for both Pb-Sn and Lead Free Solder.

Pb-Sn Solder: Sn-37Pb

Lead Free Solder: Sn-3.0Ag-0.5Cu

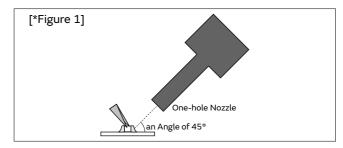

## 2. Correction with Spot Heater

Compared to local heating with a soldering iron, hot air heating by a spot heater heats the overall component and board, therefore, it tends to lessen the thermal shock. In the case of a high density mounted board, a spot heater can also prevent concerns of the soldering iron making direct contact with the component.

- 2-1. If the distance from the hot air outlet of the spot heater to the component is too close, cracks may occur due to thermal shock. To prevent this problem, follow the conditions shown in Table 4.
- 2-2. In order to create an appropriate solder fillet shape, it is recommended that hot air be applied at the angle shown in Figure 1.

Table 4

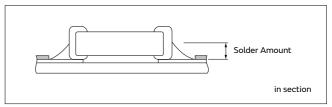

Distance	5mm or more	
Hot Air Application Angle	45° *Figure 1	
Hot Air Temperature Nozzle Outlet	400°C max.	
A selice time Time	Less than 10 seconds (1206 (3216M) size or smaller)	
Application Time	Less than 30 seconds (1210 (3225M) size or larger)	

- 3. Optimum solder amount when re-working with a soldering iron
  - 3-1. If the solder amount is excessive, the risk of cracking is higher during board bending or any other stressful condition.

Too little solder amount results in a lack of adhesive strength on the termination, which may result in chips breaking loose from the PCB.

Please confirm that solder has been applied smoothly and rising to the end surface of the chip.

<sup>\*</sup>Please manage  $\Delta T$  in the temperature of soldering iron and the preheating temperature.

GRJ

GR7

G M

GOM

GA2

GA3 GD

GA3 GF

 $\exists$ 

LΕΑ

AFM F

χ Μ

KR3

Continued from the preceding page.

- 3-2. A soldering iron with a tip of ø3mm or smaller should be used. It is also necessary to keep the soldering iron from touching the components during the re-work.
- 3-3. Solder wire with Ø0.5mm or smaller is required for soldering.

#### <Applicable to KR3/KRM Series>

4. For the shape of the soldering iron tip, refer to the figure on the right.

Regarding the type of solder, use a wire diameter of ø0.5mm or less (rosin core wire solder).

- 4-1. How to Apply the Soldering Iron Apply the tip of the soldering iron against the lower end of the metal terminal.
  - In order to prevent cracking caused by sudden heating of the ceramic device, do not touch the ceramic base directly.
  - 2) In order to prevent deviations and dislocating of the chip, do not touch the junction of the chip and the metal terminal, and the metal portion on the outside directly.
- 4-2. Appropriate Amount of Solder

  The amount of solder for corrections by soldering iron, should be lower than the height of the lower side of the chip.

#### 5. Washing

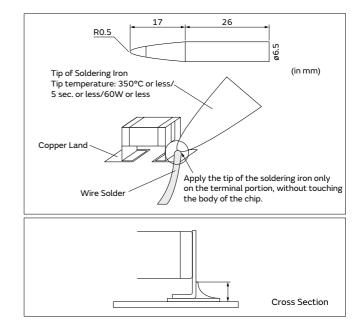

Excessive ultrasonic oscillation during cleaning can cause the PCBs to resonate, resulting in cracked chips or broken solder joints. Before starting your production process, test your cleaning equipment/process to insure it does not degrade the capacitors.

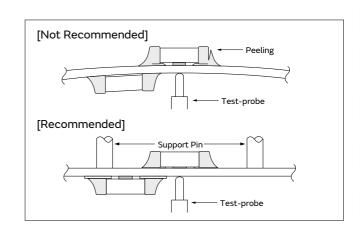

## 6. Electrical Test on Printed Circuit Board

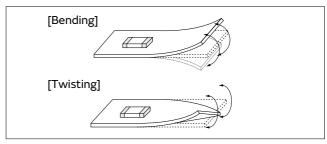

- Confirm position of the support pin or specific jig, when inspecting the electrical performance of a capacitor after mounting on the printed circuit board.
  - 1-1. Avoid bending the printed circuit board by the pressure of a test-probe, etc.
    The thrusting force of the test probe can flex the PCB, resulting in cracked chips or open solder joints. Provide support pins on the back side of the PCB to prevent warping or flexing. Install support pins as close to the test-probe as possible.
  - 1-2. Avoid vibration of the board by shock when a test-probe contacts a printed circuit board.

## 7. Printed Circuit Board Cropping

- After mounting a capacitor on a printed circuit board, do not apply any stress to the capacitor that causes bending or twisting the board.
  - 1-1. In cropping the board, the stress as shown at right may cause the capacitor to crack. Cracked capacitors may cause deterioration of the insulation resistance, and result in a short. Avoid this type of stress to a capacitor.

Continued on the following page.  $\nearrow$ 

## **1**Caution

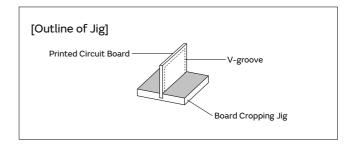

Continued from the preceding page.

- 2. Check the cropping method for the printed circuit board in advance.
  - 2-1. Printed circuit board cropping shall be carried out by using a jig or an apparatus (Disc separator, router type separator, etc.) to prevent the mechanical stress that can occur to the board.

Board Separation Method	Hand Separation	(1) Board Separation Jig	Board Separation Apparatus		
Board Separation Method	Nipper Separation	(1) Board Separation Jig	(2) Disc Separator	(3) Router Type Separator	
Level of stress on board	High	Medium	Medium	Low	
Recommended	×	△*	∆*	0	
			· Board handling		
	Hand and nipper	· Board handling	· Layout of slits		
Notes	separation apply a high level of stress. Use another method.	· Board bending direction	· Design of V groove	Board handling	
		· Layout of capacitors	· Arrangement of blades		
			· Controlling blade life		

<sup>\*</sup> When a board separation jig or disc separator is used, if the following precautions are not observed, a large board deflection stress will occur and the capacitors may crack. Use router type separator if at all possible.

(1) Example of a suitable jig
[In the case of Single-side Mounting]
An outline of the board separation jig is shown as follows. Recommended example: Stress on the component mounting position can be minimized by holding the portion close to the jig, and bend in the direction towards the side where the capacitors are mounted. Not recommended example: The risk of cracks occurring in the capacitors increases due to large stress being applied to the component mounting position, if the portion away from the jig is held and bent in the direction opposite the side where the capacitors are mounted.

**Hand Separation** 

[In the case of Double-sided Mounting]
Since components are mounted on both sides of the board, the risk of cracks occurring can not be avoided with the above method.
Therefore, implement the following measures to prevent stress from being applied to the components.

## (Measures)

- Consider introducing a router type separator.
   If it is difficult to introduce a router type separator, implement the following measures. (Refer to item 1. Mounting Position)
- (2) Mount the components parallel to the board separation surface.
- (3) When mounting components near the board separation point, add slits in the separation position near the component.
- (4) Keep the mounting position of the components away from the board separation point.

Continued on the following page. 🖊

SIM

GQM

GA2

GA3 GD

 $\exists$ 

χ Μ

KR3

## **⚠**Caution

Continued from the preceding page.

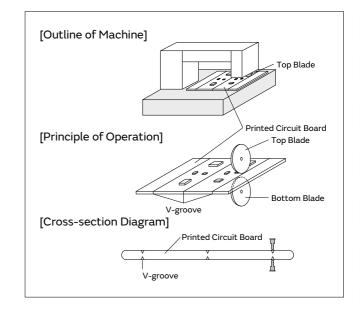

(2) Example of a Disc Separator

An outline of a disc separator is shown as follows. As shown in the Principle of Operation, the top blade and bottom blade are aligned with the V-grooves on the printed circuit board to separate the board.

In the following case, board deflection stress will be applied and cause cracks in the capacitors.

- (1) When the adjustment of the top and bottom blades are misaligned, such as deviating in the top-bottom, left-right or front-rear directions
- (2) The angle of the V groove is too low, depth of the V groove is too shallow, or the V groove is misaligned top-bottom

IF V groove is too deep, it is possible to brake when you handle and carry it. Carefully design depth of the V groove with consideration about strength of material of the printed circuit board.

Disc Separator

Recommended		Not Recommended					
		Top-bottom Misalignment		Left-right Misalignment		Front-rear Misalignment	
	Top Blade		Top Blade		Top Blade		Top Blade
	<b>Bottom Blade</b>		Bottom Blade		Bottom Blade		Bottom Blade

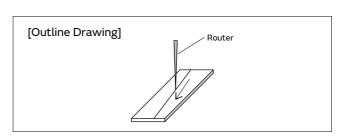

V-groove Design

Example of Recommended	Not Recommended					
V-groove Design	Left-right Misalignment	Low-Angle	Depth too Shallow	Depth too Deep		

(3) Example of Router Type Separator

The router type separator performs cutting by a router rotating at a high speed. Since the board does not bend in the cutting process, stress on the board can be suppressed during board separation.

When attaching or removing boards to/from the router type separator, carefully handle the boards to prevent bending.

Continued on the following page.  ${\cal J}$ 

279

Ω

KR3

## **1**Caution

Continued from the preceding page.  $\searrow$ 

#### 8. Assembly

1. Handling

If a board mounted with capacitors is held with one hand, the board may bend. Firmly hold the edges of the board with both hands when handling.

If a board mounted with capacitors is dropped, cracks may occur in the capacitors.

Do not use dropped boards, as there is a possibility that the quality of the capacitors may be impaired.

- 2. Attachment of Other Components
  - 2-1. Mounting of Other Components

Pay attention to the following items, when mounting other components on the back side of the board after capacitors have been mounted on the opposite side.

When the bottom dead point of the suction nozzle is set too low, board deflection stress may be applied to the capacitors on the back side (bottom side), and cracks may occur in the capacitors.

- · After the board is straightened, set the bottom dead point of the nozzle on the upper surface of the board.
- · Periodically check and adjust the bottom dead point.
- 2-2. Inserting Components with Leads into Boards When inserting components (transformers, IC, etc.) into boards, bending the board may cause cracks in the capacitors or cracks in the solder.

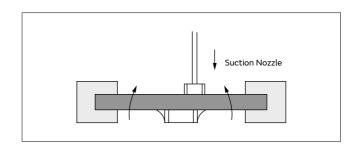

Pay attention to the following.

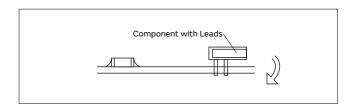

- · Increase the size of the holes to insert the leads, to reduce the stress on the board during insertion.
- $\cdot$  Fix the board with support pins or a dedicated jig before insertion.
- · Support below the board so that the board does not bend. When using support pins on the board, periodically confirm that there is no difference in the height of each support pin.
- 2-3. Attaching/Removing Sockets and/or Connectors Insertion and removal of sockets and connectors, etc., might cause the board to bend. Please insure that the board does not warp during insertion and removal of sockets and connectors, etc., or the bending may damage mounted components on the board.
- 2-4. Tightening Screws

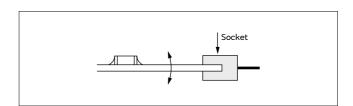

The board may be bent, when tightening screws, etc. during the attachment of the board to a shield or chassis.

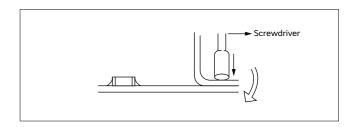

Pay attention to the following items before performing the work.

- · Plan the work to prevent the board from bending.
- · Use a torque screwdriver, to prevent over-tightening of the screws.
- · The board may bend after mounting by reflow soldering, etc. Please note, as stress may be applied to the chips by forcibly flattening the board when tightening the screws.

## **⚠** Caution

Continued from the preceding page.

## <Applicable to GMA or GMD Series>

#### 9. Die Bonding/Wire Bonding

- 1. Die Bonding of Capacitors
  - 1-1. Use the following materials for the Brazing alloys: Au-Sn (80/20) 300 to 320 °C in N2 atmosphere
  - 1-2. Mounting
    - (1) Control the temperature of the substrate so it matches the temperature of the brazing alloy.
    - (2) Place the brazing alloy on the substrate and place the capacitor on the alloy. Hold the capacitor and gently apply the load. Be sure to complete the operation within 1 minute.
- 2. Wire Bonding
  - 2-1. Wire

Gold wire: 25 micro m (0.001 inch) diameter

- 2-2. Bonding
  - (1) Thermo compression, ultrasonic ball bonding.
  - (2) Required stage temperature: 150 to 200 °C
  - (3) Required wedge or capillary weight: 0.2N to 0.5N
  - (4) Bond the capacitor and base substrate or other devices with gold wire.

#### Other

## 1. Under Operation of Equipment

- 1-1. Do not touch a capacitor directly with bare hands during operation in order to avoid the danger of an electric shock.
- 1-2. Do not allow the terminals of a capacitor to come in contact with any conductive objects (short-circuit). Do not expose a capacitor to a conductive liquid, including any acid or alkali solutions.
- 1-3. Confirm the environment in which the equipment will operate is under the specified conditions.
  - Do not use the equipment under the following environments.
  - (1) Being spattered with water or oil.
  - (2) Being exposed to direct sunlight.
  - (3) Being exposed to ozone, ultraviolet rays, or radiation.
  - (4) Being exposed to toxic gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas, etc.)
  - (5) Any vibrations or mechanical shocks exceeding the specified limits.
  - (6) Moisture condensing environments.
- 1-4. Use damp proof countermeasures if using under any conditions that can cause condensation.

## **1**Caution

Continued from the preceding page.

#### 2. Other

#### 2-1. In an Emergency

- (1) If the equipment should generate smoke, fire, or smell, immediately turn off or unplug the equipment.
  - If the equipment is not turned off or unplugged, the hazards may be worsened by supplying continuous power.
- (2) In this type of situation, do not allow face and hands to come in contact with the capacitor or burns may be caused by the capacitor's high temperature.

#### 2-2. Disposal of Waste

When capacitors are disposed of, they must be burned or buried by an industrial waste vendor with the appropriate licenses.

#### 2-3. Circuit Design

- (1) Addition of Fail Safe Function Capacitors that are cracked by dropping or bending of the board may cause deterioration of the insulation resistance, and result in a short. If the circuit being used may cause an electrical shock, smoke or fire when a capacitor is shorted, be sure to install fail-safe functions, such as a fuse, to prevent secondary accidents.
- (2) Capacitors used to prevent electromagnetic interference in the primary AC side circuit, or as a connection/insulation, must be a safety standard certified product, or satisfy the contents stipulated in the Electrical Appliance and Material Safety Law. Install a fuse for each line in case of a short.
- (3) The GJM, GMA, GMD, GQM, GR3, GRJ, GRM, KR3, KRM, LLA, LLL, LLM, LLR, NFM and ZRB series are not safety standard certified products.
- 2-4. Test Condition for AC Withstanding Voltage
  - (1) Test Equipment

Test equipment for AC withstanding voltage should be made with equipment capable of creating a wave similar to a 50/60Hz sine wave.

## (2) Voltage Applied Method

The capacitor's lead or terminal should be firmly connected to the output of the withstanding voltage test equipment, and then the voltage should be raised from near zero to the test voltage.

If the test voltage is applied directly to the capacitor without raising it from near zero, it should be applied with the zero cross. \*At the end of the test time, the test voltage should be reduced to near zero, and then capacitor's lead or terminals should be taken off the output of the withstanding voltage test equipment. If the test voltage applied directly to the capacitor without raising it from near zero, surge voltage may occur and cause a defect.

\*ZERO CROSS is the point where voltage sine wave passes 0V. - See the figure at right -

## 2-5. Remarks

Failure to follow the cautions may result, worst case, in a short circuit and smoking when the product is used.

The above notices are for standard applications and conditions. Contact us when the products are used in special mounting conditions.

Select optimum conditions for operation as they determine the reliability of the product after assembly.

The data herein are given in typical values, not guaranteed ratings.

## Rating

#### 1. Operating Temperature

- 1. The operating temperature limit depends on the capacitor.
  - 1-1. Do not apply temperatures exceeding the maximum operating temperature.

It is necessary to select a capacitor with a suitable rated temperature that will cover the operating temperature range.

- It is also necessary to consider the temperature distribution in equipment and the seasonal temperature variable factor.
- 1-2. Consider the self-heating factor of the capacitor. The surface temperature of the capacitor shall not exceed the maximum operating temperature including self-heating.

## 2. Atmosphere Surroundings (gaseous and liquid)

- 1. Restriction on the operating environment of capacitors.
  - 1-1. Capacitors, when used in the above, unsuitable, operating environments may deteriorate due to the corrosion of the terminations and the penetration of moisture into the capacitor.
  - 1-2. The same phenomenon as the above may occur when the electrodes or terminals of the capacitor are subject to moisture condensation.
  - 1-3. The deterioration of characteristics and insulation resistance due to the oxidization or corrosion of terminal electrodes may result in breakdown when the capacitor is exposed to corrosive or volatile gases or solvents for long periods of time.

#### 3. Piezo-electric Phenomenon

 When using high dielectric constant type capacitors in AC or pulse circuits, the capacitor itself vibrates at specific frequencies and noise may be generated.
 Moreover, when the mechanical vibration or shock is added to the capacitor, noise may occur.

## Soldering and Mounting

## 1. PCB Design

- 1. Notice for Pattern Forms
  - susceptible to flexing stresses since they are mounted directly on the substrate.

    They are also more sensitive to mechanical and thermal stresses than leaded components.

    Excess solder fillet height can multiply these stresses and cause chip cracking. When designing substrates, take land patterns and dimensions into consideration to eliminate the possibility of excess solder fillet height.

1-1. Unlike leaded components, chip components are

1-2. There is a possibility of chip cracking caused by PCB expansion/contraction with heat, because stress on a chip is different depending on PCB material and structure. When the thermal expansion coefficient greatly differs between the board used for mounting and the chip, it will cause cracking of the chip due to the thermal expansion and contraction. When capacitors are mounted on a fluorine resin printed circuit board or on a single-layered glass epoxy board, it may also cause cracking of the chip for the same reason.

#### <Applicable to NFM Series>

1-3. Because noise is suppressed by shunting unwanted high-frequency components to the ground, when designing a land for the NFM series, design the ground pattern to be as large as possible in order to better bring out this characteristic.

As shown in the figure below, noise countermeasures can be made more effective by using a via to connect the ground pattern on the chip mounting surface to a larger ground pattern on the inner layer.

2-2. Dimensions of Slit (Example)

Preparing the slit helps flux cleaning and resin coating on the back of the capacitor.

However, the length of the slit design should be as short as possible to prevent mechanical damage in the capacitor.

A longer slit design might receive more severe mechanical stress from the PCB.

Recommended slit design is shown in the Table.

3. Board Design

When designing the board, keep in mind that the amount of strain which occurs will increase depending on the size and material of the board.

[Relationship with amount of strain to the board thickness, length, width, etc.]

$$\mathcal{E} = \frac{3PL}{2Ewh^2}$$
 Relationship between load and strain

- ε: Strain on center of board (μst)
- L: Distance between supporting points (mm)
- w: Board width (mm)
- h: Board thickness (mm)
- E: Elastic modulus of board (N/m2=Pa)
- Y: Deflection (mm)
- P: Load (N)

When the load is constant, the following relationship can be established.

- As the distance between the supporting points (L) increases, the amount of strain also increases.
- →Reduce the distance between the supporting points.
- · As the elastic modulus (E) decreases, the amount of strain increases. →Increase the elastic modulus.
- · As the board width (w) decreases, the amount of strain increases.
- · As the board thickness (h) decreases, the amount of strain increases. →Increase the thickness of the board.

Since the board thickness is squared, the effect on the amount of strain becomes even greater.

## 2. Adhesive Application

If you want to temporarily attach the capacitor to the board using an adhesive agent before soldering the capacitor, first be sure that the conditions are appropriate for affixing the capacitor. If the dimensions of the land, the type of adhesive, the amount of coating, the contact surface area, the curing temperature, or other conditions are inappropriate, the characteristics of the capacitor may deteriorate.

- 1. Selection of Adhesive
  - 1-1. Depending on the type of adhesive, there may be a decrease in insulation resistance. In addition, there is a chance that the capacitor might crack from contractile stress due to the difference in the contraction rate of the capacitor and the adhesive.
  - 1-2. If there is not enough adhesive, the contact surface area is too small, or the curing temperature or curing time are inadequate, the adhesive strength will be insufficient and the capacitor may loosen or become disconnected during transportation or soldering. If there is too much adhesive, for example if it overflows onto the land, the result could be soldering defects, loss of electrical connection, insufficient curing, or slippage after the capacitor is mounted.

Furthermore, if the curing temperature is too high or the curing time is too long, not only will the adhesive

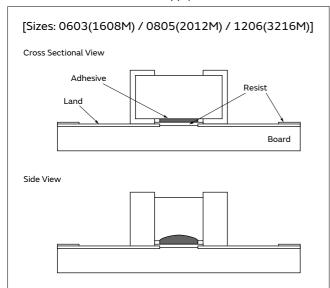

strength be reduced, but solderability may also suffer due to the effects of oxidation on the terminations (outer electrodes) of the capacitor and the land surface on the board.

- Selection of Adhesive
   Epoxy resins are a typical class of adhesive.
   To select the proper adhesive, consider the following points.
  - There must be enough adhesive strength to prevent the component from loosening or slipping during the mounting process.
  - 2) The adhesive strength must not decrease when exposed to moisture during soldering.
  - 3) The adhesive must have good coatability and shape retention properties.
  - 4) The adhesive must have a long pot life.
- 5) The curing time must be short.
- 6) The adhesive must not be corrosive to the exterior of the capacitor or the board.
- 7) The adhesive must have good insulation properties.
- 8) The adhesive must not emit toxic gases or otherwise be harmful to health.
- The adhesive must be free of halogenated compounds.

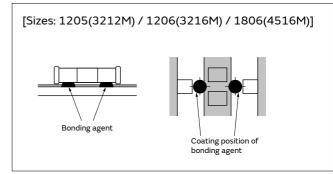

Continued on the following page.

Continued from the preceding page.  $\searrow$ 

(2) Use the following illustration as a guide to the amount of adhesive to apply.

## <Applicable to NFM Series>

## 3. Adhesive Curing

1. Insufficient curing of the adhesive can cause chips to disconnect during flow soldering and causes deterioration in the insulation resistance between the terminations due to moisture absorption.

Control curing temperature and time in order to prevent insufficient hardening.

## 4. Flux for Flow Soldering

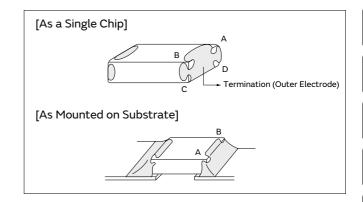

1. An excessive amount of flux generates a large quantity of flux gas, which can cause a deterioration of solderability, so apply flux thinly and evenly throughout. (A foaming system is generally used for flow soldering.)

- 2. Flux containing too high a percentage of halide may cause corrosion of the terminations unless there is sufficient cleaning. Use flux with a halide content of 0.1% max.
- 3. Strong acidic flux can corrode the capacitor and degrade its performance.

Please check the quality of capacitor after mounting.

## 5. Flow Soldering

• Set temperature and time to ensure that leaching of the terminations does not exceed 25% of the chip end area as a single chip (full length of the edge A-B-C-D shown at right) and 25% of the length A-B shown as mounted on substrate.

## 6. Reflow Soldering

The flux in the solder paste contains halogen-based substances and organic acids as activators. Strong acidic flux can corrode the capacitor and degrade its performance.

Please check the quality after mounting, please use.

GOM

## **Notice**

Continued from the preceding page.

#### 7. Washing

- Please evaluate the capacitor using actual cleaning equipment and conditions to confirm the quality, and select the solvent for cleaning.
- 2. Unsuitable cleaning may leave residual flux or other foreign substances, causing deterioration of electrical characteristics and the reliability of the capacitors.

## 8. Coating

 A crack may be caused in the capacitor due to the stress of the thermal contraction of the resin during curing process.

The stress is affected by the amount of resin and curing contraction.

Select a resin with low curing contraction.

The difference in the thermal expansion coefficient between a coating resin or a molding resin and the capacitor may cause the destruction and deterioration of the capacitor such as a crack or peeling, and lead to the deterioration of insulation resistance or dielectric breakdown.

Select a resin for which the thermal expansion coefficient is as close to that of the capacitor as possible.

A silicone resin can be used as an under-coating to buffer against the stress.

- 2. Select a resin that is less hygroscopic.
  - Using hygroscopic resins under high humidity conditions may cause the deterioration of the insulation resistance of a capacitor.
  - An epoxy resin can be used as a less hygroscopic resin.
- The halogen system substance and organic acid are included in coating material, and a chip corrodes by the kind of Coating material.
   Do not use strong acid type.

#### <Applicable to ZRB Series>

4. Loss suppress acoustic noise may be caused in ZRB series due to the resin during curing process. Please contact our sales representative or product engineers on the apply to resin during curing process.

#### Other

## 1. Transportation

- 1. The performance of a capacitor may be affected by the conditions during transportation.
  - 1-1. The capacitors shall be protected against excessive temperature, humidity, and mechanical force during transportation.
    - (1) Climatic condition
      - low air temperature: -40°C
      - change of temperature air/air: -25°C/+25°C
      - low air pressure: 30 kPa
      - change of air pressure: 6 kPa/min.
    - (2) Mechanical condition

Transportation shall be done in such a way that the boxes are not deformed and forces are not directly passed on to the inner packaging.

- 1-2. Do not apply excessive vibration, shock, or pressure to the capacitor.
  - (1) When excessive mechanical shock or pressure is applied to a capacitor, chipping or cracking may occur in the ceramic body of the capacitor.
  - (2) When the sharp edge of an air driver, a soldering iron, tweezers, a chassis, etc. impacts strongly on the surface of the capacitor, the capacitor may crack and short-circuit.
- 1-3. Do not use a capacitor to which excessive shock was applied by dropping, etc.

A capacitor dropped accidentally during processing may be damaged.

## 2. Characteristics Evaluation in the Actual System

- 1. Evaluate the capacitor in the actual system, to confirm that there is no problem with the performance and specification values in a finished product before using.
- 2. Since a voltage dependency and temperature dependency exists in the capacitance of high dielectric type ceramic capacitors, the capacitance may change depending on the operating conditions in the actual system. Therefore, be sure to evaluate the various characteristics, such as the leakage current and noise absorptivity, which will affect the capacitance value of the capacitor.
- 3. In addition, voltages exceeding the predetermined surge may be applied to the capacitor by the inductance in the actual system. Evaluate the surge resistance in the actual system as required.

## <Applicable to NFM Series>

4. The effects of noise suppression can vary depending on the usage conditions, including differences in the circuit or IC to be used, the type of noise, the shape of the pattern to be mounted, and the mounting location. Be sure to verify the effect on the actual device in advance.

# Design Support Tool "SimSurfing"

https://www.murata.com/simsurfing/

This is the latest tool to get the electrical characteristics for Capacitors, Inductors, and EMI Suppression Filters, and to simulate Thermistors' behavior!

- (1) By performance/type
- (2) By part number

## 2 Show graph

Click each button on each tab of [Basic], [S-parameter] and [Detailed].

## 3 Data download

<sup>\*</sup> Images are as of October 2015. Be assured that this software will be updated frequently.

## ■ Web page Introduction

# Search by Part Number http://psearch.en.murata.com/capacitor/partnumber/

You can search for capacitors by specifying the alphanumeric characters in the part number. The packing codes shown contain the substitute character "#". If you enter the official packing code, part numbers that contain that packing code will be matched.

## Search by Specifications http://psearch.en.murata.com/capacitor/spec/smd/

You can search for SMD, lead type, or screw termination type capacitors by indicating specifications such as application, capacitance, rated voltage, or temperature characteristics.

You can narrow your search by entering values of ranges, and by specifying product characteristics.

The items for narrowing searches are linked, so specifying one condition causes selectable options for the other items to allow input only of conditions that match the relevant part numbers.

## [Search result]

#### **⚠** Note

## 1 Export Control

#### For customers outside Japan:

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

## For customers in Japan:

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

- 2 Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.
  - Aircraft equipment
  - Aerospace equipment
  - 3 Undersea equipment
  - Power plant equipment
  - Medical equipment
  - (6) Transportation equipment (vehicles, trains, ships, etc.)
  - Traffic signal equipment
  - 8 Disaster prevention / crime prevention equipment
  - Data-processing equipment
  - Application of similar complexity and/or reliability requirements to the applications listed above

- 3 Product specifications in this catalog are as of September 2017. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.
- 4 Please read rating and \(\textit{\Delta}\text{CAUTION}\) (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.
- 5 This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.
- Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.
- No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
