MEJ2 Series

5.2kVDC Isolated 2W DC/DC Converters

FEATURES

| RoHS compliant |
|--|
| Basic/supplementary isolation to UL 60950 ² |
| UL60601 (3rd Ed) recognition ² |
| Power density 0.81W/cm ³ |
| Single and dual outputs |
| UL 94V-0 package material |
| Footprint 1.96cm ² |
| SIP package style |
| ■ 5.2kVDC isolation |
| ■ 3.3V, 5V, 12V & 15V inputs |
| ■ 3.3V, 5V, 9V, 12V & 15V output |
| Internal SMD construction |
| Fully encapsulated with toroidal magnetics |
| Pin compatible with the MEV, NMV, NMK, & NMJ series |
| MTTF up to 4200 million hours |

PRODUCT OVERVIEW

The MEJ2 series are single and dual output medically approved DC/DC converters in a 7 pin SIP package style offering a power upgrade path from the NMJ series SIP DC/DC converters. The MEJ2 series is UL 60950 and UL 60601 recognized, which makes it ideal for applications where safety and miniaturisation are of paramount importance.

TEMPERATURE DERATING GRAPH

UL60950 recognition to a maximum ambient temperature of 85°C and/or case temperature limit of 155°C, measured on the face opposite the pins.

MEJ2 Series

5.2kVDC Isolated 2W DC/DC Converters

The voltage tolerance envelope shows typical load regulation characteristics for this product series. The tolerance envelope is the maximum output voltage variation due to changes in output loading.

TECHNICAL NOTES

ISOLATION VOLTAGE

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions MEJ2 series of DC/DC converters are all 100% production tested at their stated isolation voltage. This is 5.2kVDC for 1 second.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

The MEJ2 series has been recognized by Underwiters Laboratory for various voltages, please see safety approval section below.

REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

SAFETY APPROVAL

UL 60601

The MEJ2 series has been recognized by Underwriters Laboratory (UL) to the 3rd edition of 60601 and provides the following MOOP (means of operator protection), in a maximum ambient temperature of 85°C and/or case temperature limit of 130°C (case temperature measured on the face opposite the pins): 2 MOOP based upon a working voltage of 200 Vrms max. and 280 Vpkmax., between Primary and Secondary and 1 MOOP based upon a working voltage of 200 Vrms max., between Primary and its Enclosure. File Number E202895 applies.

UL 60950

The MEJ2 series has been recognized by Underwriters Laboratory (UL) to UL 60950 for basic/supplementary insulation to a working voltage of 200Vrms in a maximum ambient temperature of 85°C and/or case temperature limit of 130°C (case temperature measured on the face opposite the pins). File number E151252 applies.

FUSING

The MEJ2 Series of converters are not internally fused so to meet the requirements of UL an anti-surge input line fuse should always be used with ratings as defined below. MEJ2x03xxxC: 2A

MEJ2x05xxxC: 2A MEJ2x12xxxC: 750mA

MEJ2x15xxxC: 750mA

All fuses should be UL recognized and rated to at least the maximum allowable DC input voltage.

RoHS COMPLIANCE INFORMATION

This series is compatible with RoHS soldering systems with a peak wave solder temperature of 260°C for 10 seconds. The pin termination finish on this product series is Tin Plate, Hot Dipped over Matte Tin with Nickel Preplate. The series is backward compatible with Sn/Pb soldering systems. For further information, please visit www.murata-ps.com/rohs

5.2kVDC Isolated 2W DC/DC Converters

APPLICATION NOTES

Minimum load

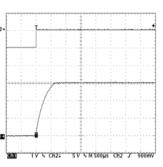

The minimum load to meet datasheet specification is 10% of the full rated load across the specified input voltage range. Lower than 10% minimum loading will result in an increase in output voltage, which may rise to typically double the specified output voltage if the output load falls to less than 5%.

Capacitive loading and start up

Typical start up times for this series, with a typical input voltage rise time of 2.2μ s and output capacitance of 10μ F, are shown in the table below. The product series will start into a capacitance of 47μ F with an increased start time, however, the maximum recommended output capacitance is 10μ F.

| | Start-up time | | Start-up time |
|-------------|---------------|-------------|---------------|
| | ms | | ms |
| MEJ2S0303SC | 0.89 | MEJ2S1515SC | 6.05 |

| | | | |

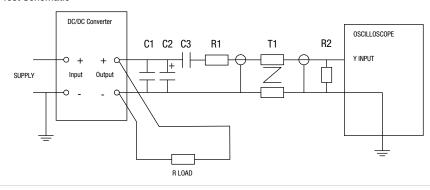

Ripple & Noise Characterisation Method

Ripple and noise measurements are performed with the following test configuration.

| C1 | 1µF X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC/DC converter |
|-------------|--|
| C2 | 10μ F tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC/DC converter with an ESR of less than $100m\Omega$ at 100 kHz |
| C3 | 100nF multilayer ceramic capacitor, general purpose |
| R1 | 450Ω resistor, carbon film, \pm 1% tolerance |
| R2 | 50Ω BNC termination |
| T1 | 3T of the coax cable through a ferrite toroid |
| RLOAD | Resistive load to the maximum power rating of the DC/DC converter. Connections should be made via twisted wires |
| Measured va | lues are multiplied by 10 to obtain the specified values. |
