### **6**Capacitance

Expressed by three-digit alphanumerics. The unit is pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two

If there is a decimal point, it is expressed by the capital letter " ${\bf R}$ ." In this case, all figures are significant digits.

### **6**Capacitance Tolerance

# **Radial Lead Type Monolithic Ceramic Capacitors**

# RPE Series (DC25V-DC100V)

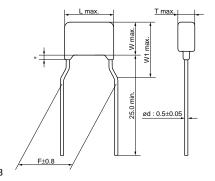

#### ■ Features

- 1. The RPE series capacitors have small dimensions, large capacitance, and a capacity volume ratio of 10 micro F/cm cubed, close to that of electrolytic capacitors. They do not have polarity.
- 2. Excellent frequency characteristics and due to their small internal inductance are suitable for high frequencies.
- 3. Not coated with wax so there is no change in their exterior appearance due to the outflow of wax during soldering or solvent during cleansing.
- 4. They are highly nonflammable, having characteristics equivalent to the UL94V-0 standard.

# **Radial Lead Type Monolithic Ceramic Capacitors**

## RPE Series Small Size, Large Capacitance (DC50V)

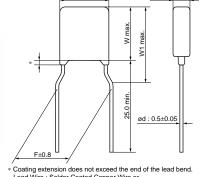

#### ■ Features

- 1. The RPE series capacitors have small dimensions, large capacitance, and a capacity volume ratio of 10 micro F/cm cubed, close to that of electrolytic capacitors. They do not have polarity.
- 2. Excellent frequency characteristics and due to their small internal inductance are suitable for high frequencies.
- 3. They are not coated with wax so there is no change in their exterior appearance due to the outflow of wax during soldering or solvent during cleansing.
- 4. They are highly nonflammable, having characteristics equivalent to the UL94V-0 standard.
- 5. We design capacitors in much more compact size than current RPE Series, having reduced the diameter by 70% max.
