Crystal Units

for Consumer and Industrial

These crystal units feature a small package and highly accurate frequency, based on Murata's excellent package technology and high grade quartz crystal elements.

Features

1. This series is ideal for applications requiring high accuracy crystal units, especially communication clocks such as Wi-Fi, Bluetooth®, Bluetooth® Low Energy, SATA and USB3.0.
2. The crystal units are extremely small, contributing to a reduction in the mounting area.
3. The series complies to RoHS directive, being lead-free (phase 3).

Applications

1. Clock for Wi-Fi, Bluetooth® and ACPU controller ICs: smartphone, wearable device, module, etc.
2. Clock for Bluetooth® Low Energy controller ICs: wearable, fitness and healthcare devices, module, etc.
3. Storage devices with SATA interface: HDD, SSD, Optical storage device, etc.
4. Clock for USB (Ultra-Speed and High-Speed) controller ICs: Mobile phone, DVC, DSC, Portable audio, PC peripheral, etc.
5. Clock for PC, visual equipment controller ICs
6. Audio equipment and musical instrument, etc.
7. Clock for PLC, Inverter, Servo Amp, Servo Motor, etc. controller ICs

(4) Please use the products immediately after the package is opened, because the characteristics may be reduced in quality, and/or be degraded in solderability due to storage under poor conditions.

(5) Please do not drop the products to avoid cracking the crystal element.

4. Other

Conformal coating or washing of the component is not acceptable because it is not hermetically sealed.

Please be sure to consult with our sales representative or engineer whenever and prior to using the products.

Notice (Rating)

The component may be damaged if excess mechanical stress is applied.

Notice (Handling)

1. Irregular or stopped oscillation may occur under unmatched circuit conditions.

Please design your oscillation circuit to get 5 times or more of a negative resistance against the maximum value of the Equivalent Series Resistance, that is specified in order.

2. Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

Measuring Circuit of Crystal Units

Measuring Circuit 1

1. Frequency Measuring Method

The load resonance frequency (Lower frequency of the two given when the electrical impedance of the component becomes resistant near its resonance point) is measured by network analyzer (KEYSIGHT E5100A or the equivalent) and the circuit in Figure 1. DUT is shown in Figure 2, and the value of Cs refers to the load capacitance value in specifications.

2. Equivalent Series Resistance

The equivalent series resistance (ESR) is measured by network analyzer (KEYSIGHT E5100A or equivalent) and the circuit in Figure 1. DUT is shown in Figure 3.

3. Measuring Condition

Standard conditions for measurement shall be $+25\pm 3^{\circ}\text{C}$ temperature and humidity of 45 to 85%R.H.

Measuring Circuit 2

1. Frequency Measuring Method

The load resonance frequency is measured by network analyzer (S&A 250B or the equivalent) and the circuit in Figure 1. Measured frequency may be changed by using different measurement equipment.

2. Equivalent Series Resistance

The equivalent series resistance (ESR) is measured by network analyzer (S&A 250B or equivalent) and the circuit in Figure 1. DUT is shown in Figure 2.

3. Measuring Condition

Standard conditions for measurement shall be $+30\pm 0.5^{\circ}\text{C}$ and 25 to 75%R.H.
