Figure 1-1 MYD-Y6ULX-HMI Development Board

The [MYD-Y6ULX-HMI Development Board](#) is specially designed for MYIR's [MYD-Y6ULX-CHMI Display Panel](#) for Human Machine Interface (HMI) applications. It is powered by MYIR's [MYC-Y6ULX CPU Module](#) which is a compact System-on-Module (SoM) integrated with 528MHz [NXP i.MX6UL/6ULL ARM Cortex-A7](#) processor, 256MB DDR3, 256MB Nand Flash and Ethernet PHY.

In addition to the core components provided by the [MYC-Y6ULX](#) core board, the [MYD-Y6ULX-HMI](#) has extended multiple peripheral interfaces like RS232, RS485, USB Host/Device, 10/100Mbps Ethernet and TF card to its base board to allow communications with other devices. It also features a Camera interface and supports 16-bit LCD & 4-wire resistive or capacitive touch screen driven directly from the board circuit. The board provides two 2.0mm pitch 2\*20-pin headers for IO extension. User can customize their own IO boards to connect with the MYD-Y6ULX-HMI to further explore more functions. MYIR offers an IO board [MYB-Y6ULX-HMI-4GEXP](#) as an option for users which has extended WiFi & BT, USB based 4G LTE Module interface, Audio and GPIOs. A 7-inch LCD with capacitive touch screen is also available as an add-on option, thus making a complete solution for HMI applications.

The [MYD-Y6ULX-HMI](#) is preloaded with Linux OS. MYIR has provided plenty of resources including kernel and drivers in source code, application examples and an **MEasyHMI QT demo** for developers to start their development rapidly.
