NXT4557

SIM card interface level translator with enable pin

Rev. 2.1 — 22 May 2023 Product data sheet

1. General description

The NXT4557 device is built for interfacing a SIM card with a single low-voltage host side interface. The NXT4557 has three level translators to convert the data, RST and CLK signals between a SIM card and a host microcontroller. A high speed level translation capable of supporting class-B, class-C SIM cards. An active HIGH EN pin enables normal operation of the translator. A HIGH to LOW transition on pin EN initiates a shutdown sequence on SIM card pins in accordance with ISO-7816-3.

The NXT4557 is compliant with all ETSI, IMT-2000 and ISO-7816 SIM/Smart card interface requirements.

2. Features and benefits

- Support SIM cards and eSIM with supply voltages 1.62 V to 3.3 V
- Host micro-controller operating voltage range: 1.08 V to 1.98 V
- Automatic level translation of I/O, RST and CLK between SIM card and host side interface with capacitance isolation
- Incorporates shutdown feature for the SIM card signals according to ISO-7816-3
- High $V_{dis(UVLO\_AC)}$ switching level, arranging quick shut down when V_{CC_SIM} powers down
- Integrated pull-up resistors; no external resistor required
- Integrated EMI Filters suppresses higher harmonics of digital I/O's
- A HIGH EN signal enables the translation of the signals
- Low current shutdown mode < 1 µA
- Supports clock speed beyond 5 MHz clock
- Pb-free, Restriction of Hazardous Substances (RoHS) compliant and free of halogen and antimony (Dark Green compliant)
- ESD protection:
  - HBM ANSI/ESDA/JEDEC JS-001 exceeds 2 kV
  - CDM ANSI/ESDA/JEDEC JS-002 exceeds 1 kV
  - IEC61000-4-2 level 4, contact and air discharge on all SIM card-side pins are 8kV and 15 kV
- Available in 10-pin XQFN package

3. Applications

- NXT4557 can be used with a range of SIM card attached devices including:
  - Mobile and personal phones
  - Wireless modems
  - SIM card terminals

4. Ordering information

Table 1. Ordering information

Type number	Package			
	Temperature range	Name	Description	Version
NXT4557GU	-40 °C to +85 °C	XQFN10	plastic, extremely thin quad flat package; no leads; 10 terminals; body 1.40 × 1.80 × 0.50 mm	SOT1160-1

5. Marking

Table 2. Marking

Type number	Marking code[1]
NXT4557GU	z7

[1] The pin 1 indicator is located on the lower left corner of the device, below the marking code.

6. Functional diagram

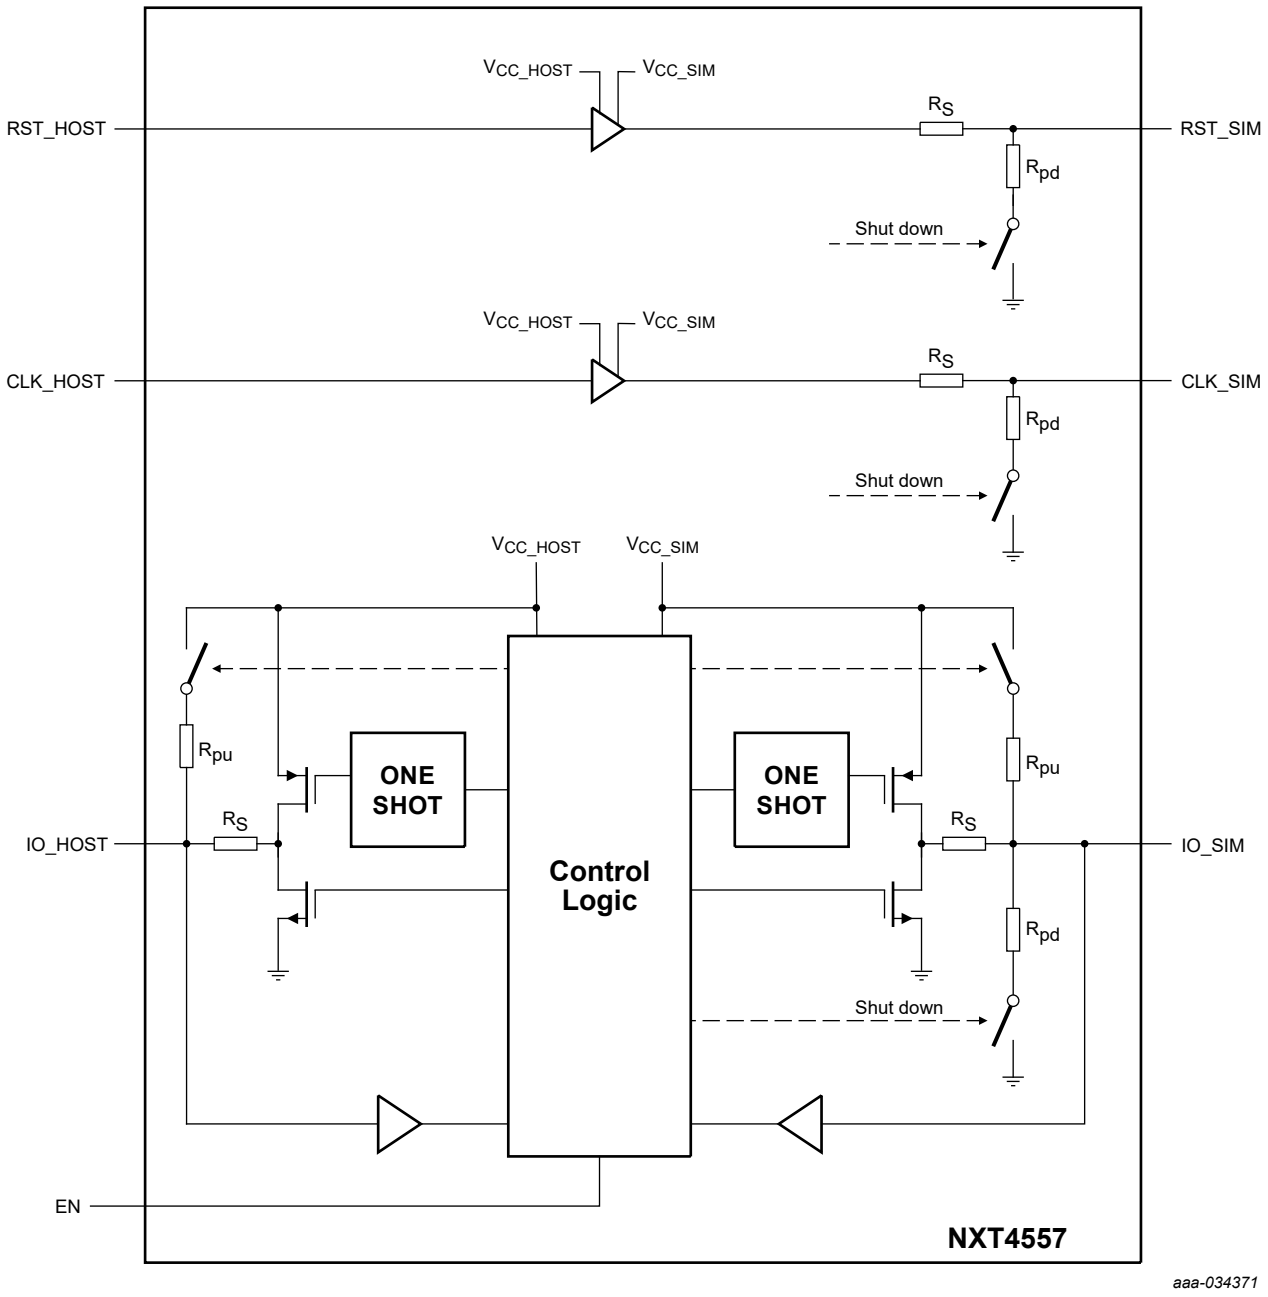

Fig. 1. Functional diagram

7. Pinning information

7.1. Pinning

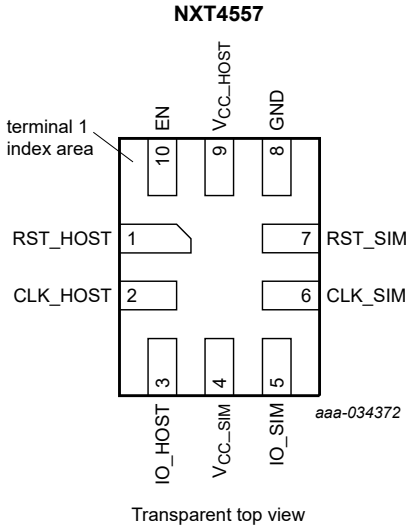

Fig. 2. Pin configuration SOT1160-1 (XQFN10)

7.2. Pin description

Table 3. Pin description

Symbol	Pin	Type	Description
RST_HOST	1	I	Reset input from host controller.
CLK_HOST	2	I	Clock input from host controller.
IO_HOST	3	I/O	Host controller bidirectional data input/output. This pin can be driven from push pull as well as open drain drivers.
V_{CC_SIM}	4	power	Supply voltage for the SIM CARD side input/output pins. This input voltage ranges from 1.62 V to 3.3 V. This pin should be bypassed with a 0.1 µF ceramic capacitor close to the pin.
IO_SIM	5	I/O	SIM card bidirectional data input/output. The SIM card output must be on an open-drain driver.
CLK_SIM	6	O	Clock output pin for the SIM card.
RST_SIM	7	O	Reset output pin for the SIM card.
GND	8	ground	Ground for the SIM card and host controller. Proper grounding and bypassing are required to meet ESD specifications.
V_{CC_HOST}	9	power	Supply voltage for the host controller side input/output pins (CLK_HOST, RST_HOST, IO_HOST). This pin should be bypassed with a 0.1 µF ceramic capacitor close to the pin.
EN	10	I	Enable input from host controller to enable or disable the translator. Also used to initiate shutdown sequence

8. Functional description

8.1. Functional behavior

The functional diagram of the NTX4557 is shown in Fig. 1.

The upper part of Fig. 1 shows the RST and CLK channels which are uni-directional level shifters from the host to the SIM card side.

The bottom part shows the architecture of the bidirectional I/O channel. Both on IO_HOST and IO_SIM a resistor R_{pu} pulls up the I/O node. On both sides an output stage is present that consists of a PMOST and an NMOST device. Each output stage drives the output through a series resistor R_S. Input stages sense the I/O nodes and pass LOW/HIGH information to the control logic that controls the translator outputs and several pull-up and pull-down resistors.

The NXT4557 I/O channel does not require a dedicated input signal to control the direction of data flow from IO_HOST to IO_SIM or from IO_SIM to IO_HOST. Change in driving direction is possible when both sides are at HIGH state. The control logic recognizes the I/O node with the first falling edge and grants control over the opposite I/O node. When for example the IO_HOST is turned LOW, the control circuit will turn on the NMOST on the IO_SIM side, pulling LOW IO_SIM. The IO_SIM pin is then an output only, until IO_HOST is turned HIGH and the translator has turned IO_SIM HIGH again.

The PMOST devices are used to actively turn high the outputs. Each PMOST is driven by a one-shot circuit that generates a pulse. For example: Assuming HOST to SIM communication, when the IO_HOST is turned HIGH, it will activate the one shot circuit on the IO_SIM side. A pulse starts, arranging a fast LOW to HIGH transition on IO_SIM. When the pulse has finished, the PMOST is released. At that stage, the system returns to a standard open drain state whereby the pull resistors keep the I/O nodes HIGH.

At the same time, at a LOW to HIGH transition, the one shot on the input side is activated as well. In an open drain application, this creates a typical input LOW to HIGH waveform. Fig. 3 shows an example of a LOW to HIGH transition in an open drain application.

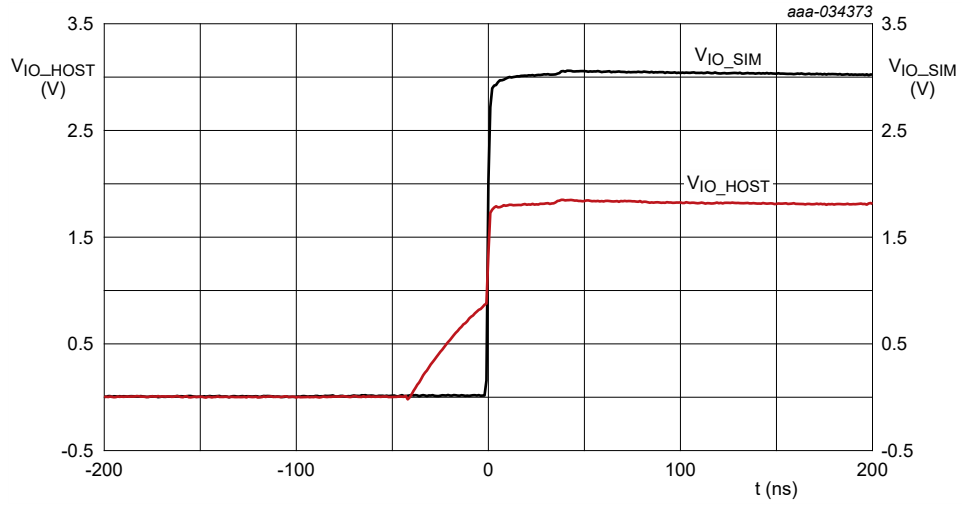

Fig. 3. LOW to HIGH transition for IO_HOST to IO_SIM communication

Looking at the input signal, the first part of the LOW to HIGH transition is an exponential curve caused by the I/O node capacitance being charged via the pull-up resistor. The second part starts when the input signal crosses the input switching level. The rising edge is accelerated dramatically by the PMOST that is turned on by the one shot on the input side.

In case of a communication error or some other unforeseen incident that may drive both connected sides of the drivers at the same time, the internal logic automatically prevents stuck-at situation. This ensures that both I/Os will return to HIGH level once released from being driven LOW.

In shut down mode, the control circuit disables all output stages. Additionally, in shut down mode, the pull-up resistor on IO_SIM side is disabled, and all pull-down resistors R_{pd} on SIM side are enabled, pulling LOW the pins on the SIM side. The shut down sequence is explained in more detail in Section 8.3.

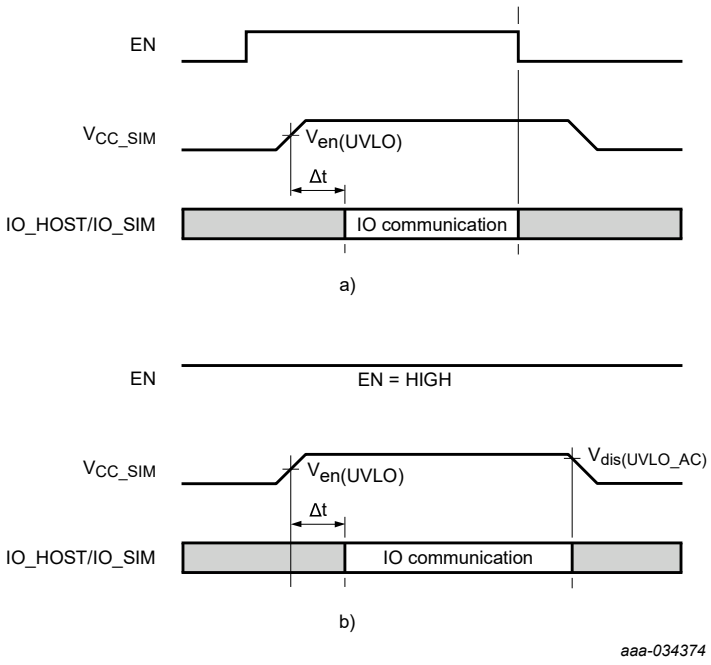
8.2. Window of I/O communication

When the translator is in operating mode, I/O communication can take place through the I/O channel. Communication can take place in both directions IO_HOST ↔ IO_SIM. Additionally, during operating mode, the RST_HOST and CLK_HOST signals are passed to RST_SIM and CLK_SIM respectively.

The translator is active when EN is turned HIGH. Another condition for the operational mode is that V_{CC_HOST} and V_{CC_SIM} are at a proper level. Fig. 4 a)/b) shows two scenarios illustrating how EN and V_{CC_SIM} control the translator mode. V_{CC_HOST} is assumed to be default present and is not shown in the waveform.

When both EN and V_{CC_SIM} have turned HIGH, I/O communication can commence after a certain amount of time: $\Delta t > 300$ ns.

It is assumed that during the power up sequence, the nodes of IO_HOST and and IO_SIM are not pulled down by the host controller and the SIM card. The translator has integrated pull-up resistors and will turn HIGH both IO_HOST and IO_SIM. The pull-up resistors R_{pu} are pointed out in Fig. 1.



$\Delta t > 300$ ns

Fig. 4. Timing window for I/O communication

When either EN turns low or V_{CC_SIM} drops below $V_{dis(UVLO)}$, the translator turns to shutdown mode. Section 8.3 illustrates the shutdown sequence in more detail.

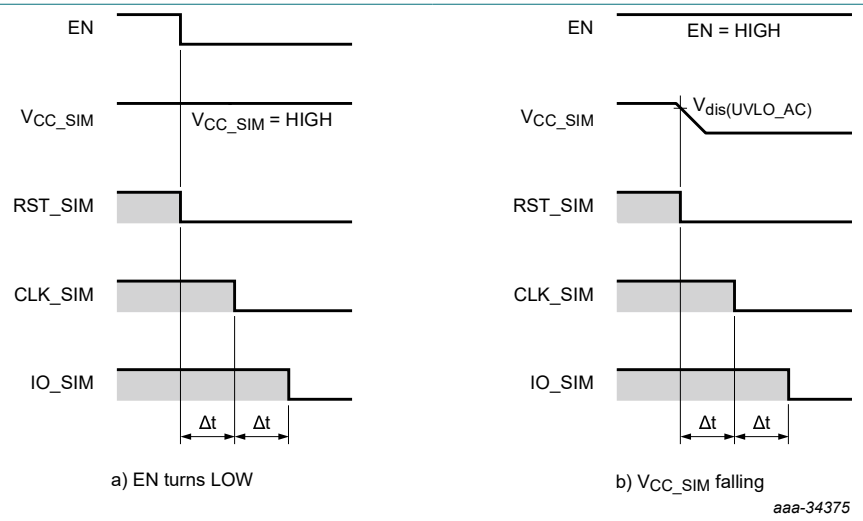
When EN turns low and during shutdown mode, the pull-down resistors are activated on all SIM card side pins (RST_SIM, CLK_SIM and IO_SIM).

8.3. Shutdown sequence

The ISO 7816-3 specification specifies the shutdown sequence for the SIM card signals to ensure that the card is properly disabled for power savings. Also, during hot swap, the orderly shutdown of these signals helps to avoid any improper write and corruption of data.

When either the enable, EN, is asserted LOW or when V_{CC_SIM} drops below $V_{dis(UVLO\_AC)}$, the shutdown sequence is initiated. Fig. 5 a) illustrates the shutdown sequence initiated by EN being asserted LOW. Fig. 5 b) illustrates the shutdown sequence initiated by V_{CC_SIM} being powered down.

The shut down sequence starts by pulling down the RST_SIM output. Once RST_SIM is turned LOW, CLK_SIM and IO_SIM are pulled LOW sequentially, one-by-one. Internal pull-down resistors on the SIM pins are used to pull the SIM channels LOW. The internal pull-down resistors, R_{pd}, that pull down the three pins on the SIM side are shown in Fig. 1. The shutdown sequence is completed in a few microseconds. The interval time (Δt), is typically 4 µs.



Δt = 4 µs (typical)

The shaded areas indicate that the signals are HIGH or LOW.

Fig. 5. Shutdown sequence for RST_SIM, CLK_SIM and IO_SIM of NXT4557 SIM card translator

8.4. UVLO

When V_{CC_SIM} drops below $V_{dis(UVLO\_AC)}$, the translator goes to shut down mode. This is illustrated in Fig. 4 b) and Fig. 5 b). The switching level $V_{dis(UVLO\_AC)}$ has a high value of approximately 86 %xV_{CC_SIM}. The circuitry uses an AC detection mechanism that operates accurately with a falling slope that is typical in the SIM card application. Next to this AC detection, a standard UVLO detection is in place that has no condition with respect to the slope of the rising or falling V_{CC_SIM}. For the standard UVLO, the parameters $V_{en(UVLO)}$ and $V_{dis(UVLO)}$ are involved which have lower values than $V_{dis(UVLO\_AC)}$. When V_{CC_SIM} is powered up, the translator is enabled when V_{CC_SIM} crosses $V_{en(UVLO)}$. This is illustrated in Fig. 4 a)/b).

8.5. EMI filter

All output driver stages of I/O, RST and CLK channels are equipped with EMI filters to reduce interference towards sensitive mobile communication.

8.6. ESD protection

The device has robust ESD protections on all SIM card pins. The architecture prevents any stress for the host: the voltage translator discharges any stress to supply ground.

9. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134).

Symbol	Parameter	Conditions	Min	Max	Unit
V_{ESD}	electrostatic discharge voltage	SIM card side; IEC 61000-4-2, level 4; contact discharge	-	±8	kV
		SIM card side; IEC 61000-4-2, level 4; air discharge	-	±15	kV
		all other pins; IEC 61000-4-2, level 4; contact discharge	-	±2	kV
		all other pins; HBM [1]	-	±2	kV
		all other pins; CDM [2]	-	±1	kV
V_{CC_HOST}	supply voltage		GND - 0.5	4.6	V
V_{CC_SIM}	SIM card supply voltage		GND - 0.5	4.6	V

[1] Typical values measured at 25 °C.
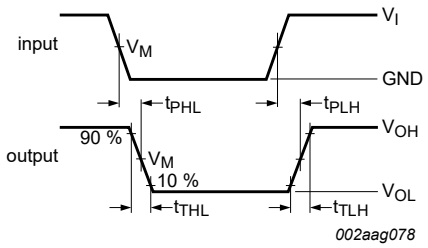
[2] t_{pd} is the same as t_{PHL} and t_{PLH}.
[3] t_t is the same as t_{THL} and t_{TLH}.
[4] Criteria: duty cycle between 40% and 60%; Voltage swing between 10% V_{CCI} and 90% V_{CCI}.

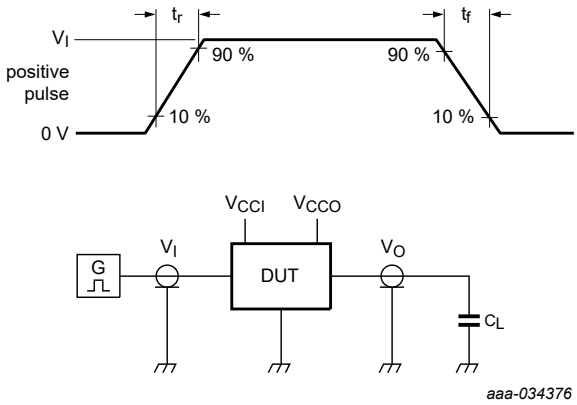
11.1. Waveforms and test circuits



Measurement points are given in Table 8.

V_{OL} and V_{OH} are typical output voltage levels that occur with the output load.

Fig. 6. Data input to data output propagation delay times



Test data is given in Table 9.

All input pulses are supplied by generators having the following characteristics:

PRR ≤ 10 MHz; Z_O = 50 Ω; t_r, t_f ≤ 2.5 ns.

C_L = Load capacitance including jig and probe capacitance.

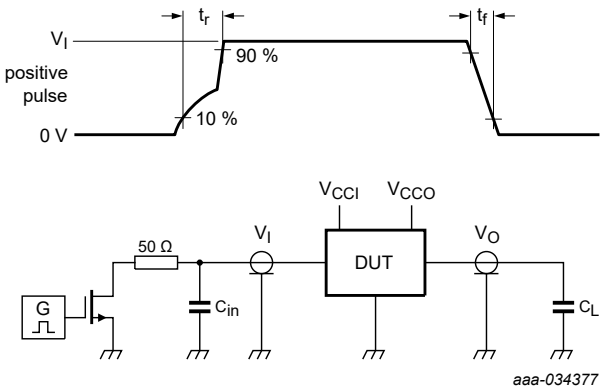
V_{CCI} is the supply voltage associated with the input.

V_{CCO} is the supply voltage associated with the output.

Fig. 7. Test circuit for measuring switching times for push-pull drive

Table 9. Test data for push-pull drive

Supply voltage		Direction	Input		Output	Load
V_{CC_HOST}	V_{CC_SIM}		V_I	V_M	V_M	C_L
1.08 V to 1.98 V	1.62 V to 3.3 V	host side to SIM card side	V_{CC_HOST}	$0.5V_{CC\_HOST}$	$0.5V_{CC\_SIM}$	50 pF
1.08 V to 1.98 V	1.62 V to 3.3 V	SIM card side to host side	V_{CC_SIM}	$0.5V_{CC\_SIM}$	$0.5V_{CC\_HOST}$	50 pF



Test data is given in Table 10.

Pulse generator (G) has the following characteristics: PRR ≤ 10 MHz; Z_O = 50 Ω; t_r, t_f ≤ 2.5 ns.

C_L = Load capacitance including jig and probe capacitance.

V_{CCI} is the supply voltage associated with the input.

V_{CCO} is the supply voltage associated with the output.

Rise time on input pin strongly depends on source impedance, internal pull-up resistor and load capacitance (C_{in}).

Fig. 8. Test circuit for measuring switching times for open drain drive

Table 10. Test data for open drain drive

Supply voltage		Direction	Input		Output	Load	
V_{CC_HOST}	V_{CC_SIM}		V_I	V_M	V_M	C_{in}	C_L
1.08 V to 1.98 V	1.62 V to 3.3 V	host side to SIM card side	V_{CC_HOST}	$0.6V_{CC\_HOST}$	$0.6V_{CC\_SIM}$	10 pF	30 pF
1.08 V to 1.98 V	1.62 V to 3.3 V	SIM card side to host side	V_{CC_SIM}	$0.5V_{CC\_SIM}$	$0.5V_{CC\_HOST}$	30 pF	10 pF

12. Application information

The application circuit for the NXT4557, which shows the typical interface with a SIM card, is shown in Fig. 9. Supply decoupling capacitors (100 nF) are recommended and should be placed close to the translator product.

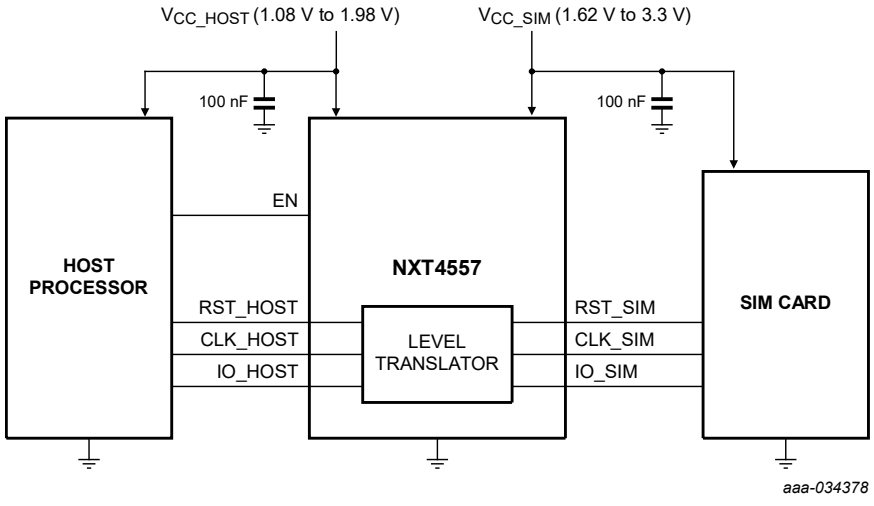


Fig. 9. NXT4557 application circuit interfacing with typical SIM card

Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. Nexperia does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local Nexperia sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between Nexperia and its customer, unless Nexperia and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the Nexperia product is deemed to offer functions and qualities beyond those described in the Product data sheet.

Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, Nexperia does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. Nexperia takes no responsibility for the content in this document if provided by an information source outside of Nexperia.

In no event shall Nexperia be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, Nexperia's aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of Nexperia.

Right to make changes — Nexperia reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — Nexperia products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an Nexperia product can reasonably be expected to result in personal injury, death or severe property or environmental damage. Nexperia and its suppliers accept no liability for inclusion and/or use of Nexperia products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Quick reference data — The Quick reference data is an extract of the product data given in the Limiting values and Characteristics sections of this document, and as such is not complete, exhaustive or legally binding.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. Nexperia makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using Nexperia products, and Nexperia accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the Nexperia product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

Nexperia does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using Nexperia products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). Nexperia does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — Nexperia products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nexperia.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. Nexperia hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of Nexperia products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Non-automotive qualified products — Unless this data sheet expressly states that this specific Nexperia product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. Nexperia accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without Nexperia's warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond Nexperia's specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies Nexperia for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond Nexperia's standard warranty and Nexperia's product specifications.

Translations — A non-English (translated) version of a document is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.
