#### GENERAL DESCRIPTION

JRC

The NJM2903/2403 consist of two independent precision voltage comparators with an offset voltage specification as low as 5.0mV max for two comparators, which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. The NJM2903/2403 have unique characteristic: the input common-mode voltage range includes ground, even though operated from a single power supply voltage. Application areas include limit comparators, simple analog-to-digital converters; pulse, square-wave and time delay generators; wide range V<sub>CO</sub>; MOS clock timers; multivibrators and high voltage digital logic gates. The NJM2903/2403 were designed to directly interface with TTL and MOS. When operated from both plus and minus power supplies, the NJM2903/2403 will directly interface with MOS logic where their low power drain is a distinct advantage over standard comparators.

+2V~+36V

#### ■ FEATURES

- Operating Voltage
- Single Supply Operation
- Open Collector Output
- High Output Sink Current
- Package Outline

15mA (@ NJM2403) DIP8, DMP8, SIP8, SSOP8, NJM2903 only: SOP8 JEDEC 150mil, :MSOP8 (TVSP8) MEET JEDEC MO-187-DA/THIN TYPE
