

HIGH SPEED SINGLE SUPPLY OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The **NJM2742** is a single supply dual operational amplifier with a wide operation voltage range from 3V to 32V and high slew rate of 10V/ μ s. Further it has a low side output swing close to ground ($V_{OL} = 0.2V$ typ. at $R_L = 2k\Omega$, $V^+ = 5V$). The combination of these characteristics makes it well-suited for power supply units, motor driving units and others.

The **NJM2742** is available in a wide variety of packages 8-lead DIP, and 8-lead surface-mount packages of SOP (DMP), SSOP and MSOP (TVSP).

Note: The common mode input voltage range of NJM2742 is shifted toward the V^- for single supply use. At the low operating voltage, the center potential of the V^+ and V^- may be out of the common mode voltage range. In this case, shift the common mode input voltage toward the V^- .
