

RP105x Series

Low Voltage 400 mA LDO Regulator

No. EA-179-221027

OUTLINE

The RP105x is a 400 mA output type CMOS-based voltage regulator with capability of low input voltage (Min. 0.9 V) and low output voltage (Min. 0.6 V). This device is remarkably improved the performance at low input voltage compared with conventional low voltage LDOs, and two power supply voltage type. (Another power source, V_{BIAS} pin voltage must be Min. 2.4 V). The device consists of a voltage reference unit, an error amplifier, resistor-net for voltage setting, a current limit circuit to avoid the destruction, a UVLO circuit with monitoring input voltage, and so on.

The RP105x has the ultra-low on resistance output driver, the on resistance is Typ. 0.4Ω ($V_{OUT} = 0.8 \text{ V}$, $I_{OUT} = 300 \text{ mA}$). The built-in driver is Nch MOSFET, thus the load transient response is excellent, (under the condition of the current between 1 mA and 400 mA, $t_r = 0.5 \mu\text{s}$, the undershoot level is approximately 50 mV).

The output voltage of this device is fixed with high accuracy. Since the packages for the device are DFN(PL)1212-6, DFN1212-5, SOT-23-5 and SC-88A therefore high density mounting of the IC on boards is possible.

FEATURES

- Supply Current Typ. $28 \mu\text{A}$
- Standby Current Typ. $0.1 \mu\text{A}$
- Ripple Rejection Typ. 80 dB ($f = 1 \text{ kHz}$, V_{IN} Ripple)
Typ. 50 dB ($f = 1 \text{ kHz}$, V_{BIAS} Ripple)
- Output Voltage Range 0.6 V to 1.5 V (0.1 V step)
For other voltages, refer to *MARKING SPECIFICATION*
- Input Voltage Range (V_{BIAS}) 2.4 V to 5.25 V ($V_{OUT} < 0.8 \text{ V}$)
Set $V_{OUT} + 1.6 \text{ V}$ to 5.25 V ($V_{OUT} \geq 0.8 \text{ V}$)
- Input Voltage Range (V_{IN}) RP105xxxxB/D: 0.9 V to V_{BIAS} ($V_{OUT} < 0.8 \text{ V}$)
Set $V_{OUT} + 0.1 \text{ V}$ to V_{BIAS} ($V_{OUT} \geq 0.8 \text{ V}$)
RP105xxxxE/F: 0.9 V to V_{BIAS}
- Output Voltage Accuracy Typ. $\pm 15 \text{ mV}$ ($T_a = 25^\circ\text{C}$)
- Temperature-Drift Coefficient of Output Voltage Typ. $\pm 50 \text{ ppm}/^\circ\text{C}$
- Dropout Voltage DFN1212-5: Typ. 105 mV
($I_{OUT} = 400 \text{ mA}$, $V_{OUT} = 1.5 \text{ V}$, $V_{BIAS} = 3.6 \text{ V}$)
- Line Regulation Typ. 0.02%/V
- Packages DFN(PL)1212-6, SC-88A, SOT-23-5, DFN1212-5
- Built-in Fold Back Protection Circuit Typ. 120 mA (Current at short mode)
- Ceramic capacitors are recommended $C_{BIAS} = C_{IN} = 1.0 \mu\text{F}$ or more, $C_{OUT} = 2.2 \mu\text{F}$ or more

APPLICATIONS

- Power source for battery-powered equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for portable communication equipment.

SELECTION GUIDE

The output voltage, the UVLO circuit, the auto-discharge function⁽¹⁾, the package, and the taping type for the device are user-selectable options.

Selection Guide

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP105Kxx1*-TR	DFN(PL)1212-6	5,000 pcs	Yes	Yes
RP105Qxx2*-TR-FE ⁽²⁾	SC-88A	3,000 pcs	Yes	Yes
RP105Nxx1*-TR-FE	SOT-23-5	3,000 pcs	Yes	Yes
RP105Lxx1*-TR	DFN1212-5	5,000 pcs	Yes	Yes

xx: The set output voltage (V_{SET}) can be designated within the range of 0.6 V (06) to 1.5 V (15) in 0.1 V step.

If the set output voltage (V_{SET}) is designated in 0.01 V step, indicate the product name as follows.

1.05 V: RP105x10x*5-TR

* : CE pin polarity and auto-discharge function of the product can be defined as follows.

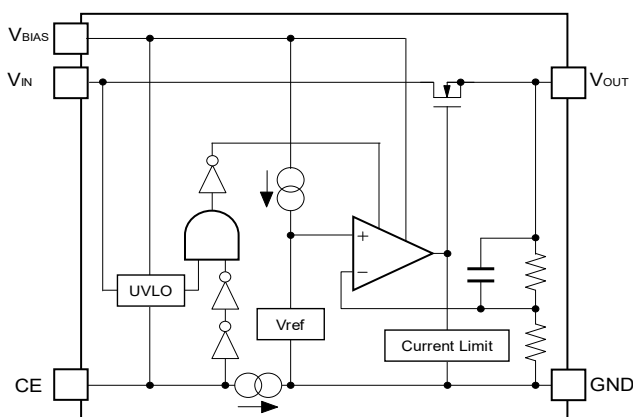

(B) "H" active, auto-discharge function is not included, UVLO is included

(D) "H" active, auto-discharge function is included, UVLO is included

(E) "H" active, auto-discharge function is not included, UVLO is not included

(F) "H" active, auto-discharge function is included, UVLO is not included

BLOCK DIAGRAMS

RP105xxxxB/E Block Diagram

RP105xxxxD/F Block Diagram

⁽¹⁾ Auto-discharge function quickly lowers the output voltage to 0 V, when the chip enable signal is switched from the active mode to the standby mode, by releasing the electrical charge accumulated in the external capacitor.

⁽²⁾ RP105Qxx2*-TR-FE supports only RP105Qxx2B/D.

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings

Symbol	Item		Rating	Unit	
V_{BIAS}	Input Voltage		6.0	V	
V_{IN}	Input Voltage (for Driver)		-0.3 to $V_{BIAS} + 0.3$	V	
V_{CE}	Input Voltage (CE Pin)		6.0	V	
V_{OUT}	Output Voltage		-0.3 to $V_{IN} + 0.3$	V	
I_{OUT}	Output Current		500	mA	
P_D	Power Dissipation ⁽¹⁾	DFN(PL)1212-6	JEDEC STD. 51-7 Test Land Pattern	450	mW
		SC-88A	Standard Test Land Pattern	380	
		SOT-23-5	JEDEC STD. 51-7 Test Land Pattern	660	
		DFN1212-5	JEDEC STD. 51-7 Test Land Pattern	560	
T_j	Junction Temperature Range		-40 to 125	$^{\circ}\text{C}$	
T_{stg}	Storage Temperature Range		-55 to 125	$^{\circ}\text{C}$	

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

Symbol	Item	Rating	Unit
V_{BIAS}	Input Voltage Range	2.4 to 5.25	V
V_{IN}		0.9 to V_{BIAS}	V
		$V_{SET} + 0.1$ to V_{BIAS} (RP105xxxxB/D and when $V_{SET} \geq 0.8$ V)	V
T_a	Operating Temperature Range	-40 to 85	$^{\circ}\text{C}$

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

⁽¹⁾ Refer to *POWER DISSIPATION* for detailed information.

ELECTRICAL CHARACTERISTICS

$V_{BIAS} = V_{CE} = 3.6\text{ V}$, $V_{IN} = \text{Set } V_{OUT} + 0.5\text{ V}$, $I_{OUT} = 1\text{ mA}$, $C_{BIAS} = C_{IN} = 1.0\text{ }\mu\text{F}$, $C_{OUT} = 2.2\text{ }\mu\text{F}$, unless otherwise noted. The specifications surrounded by \square are guaranteed by design engineering at $-40^{\circ}\text{C} \leq T_a \leq 85^{\circ}\text{C}$.

RP105x

($T_a = 25^{\circ}\text{C}$)

/ V_{BIAS} pin voltage must be equal or more than Set $V_{\text{OUT}} + 1.6 \text{ V}$.

APPLICATION INFORMATION

TYPICAL APPLICATION

External Components

Symbol	Descriptions
C _{OUT}	2.2 μF, Ceramic Capacitor, GRM155B30J225ME15, MURATA
C _{BIAS} , C _{IN}	1.0 μF, Ceramic Capacitor, GRM155B31A105KE15, MURATA

TECHNICAL NOTES

UVLO (Undervoltage Lockout)

In RP105xxxxB/D, UVLO detects and turns off the output when the input voltage V_{IN} drops lower than or equal to $V_{SET} + 50$ mV (Typ.) while CE = "H". Since RP105xxxxE/F does not have UVLO, it continues to output even if V_{IN} drops to $V_{SET} + 50$ mV (Typ.) or lower.

When V_{IN} drops below the set output voltage V_{SET} , UVLO does not turn off the output in RP105xxxxE/F while CE = "H", therefore the current flows from V_{BIAS} pin to V_{IN} pin via the inside IC. This will not be generated in RP105xxxxB/D since UVLO turns off the output when V_{IN} is lower than or equal to $V_{SET} + 50$ mV (Typ).

Phase Compensation

In this device, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor for C_{OUT} with the capacity of equal or more than 2.2 μ F.

If tantalum capacitors are connected as C_{OUT} , and if the equivalent series resistance (ESR) value is large, the operation might be unstable. Because of this, test the device with as same external components as ones to be used on the PCB.

PCB Layout

Make V_{BIAS} , V_{IN} , and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor with a capacitance value as much as 1.0 μ F or more between V_{BIAS} pin and GND, between V_{IN} pin and GND, and as close as possible to the pins.

Set external components, especially the output capacitor, as close as possible to the device, and make wiring as short as possible. V_{IN} source is supposed to be the output of the DC/DC converter. The value should be equal or lower than V_{BIAS} voltage.

TYPICAL CHARACTERISTICS

Note: Typical Characteristics are intended to be used as reference data; they are not guaranteed.

1) Output Voltage vs. Output Current ($C_{BIAS} = 1.0 \mu\text{F}$, $C_{IN} = C_{OUT} = 2.2 \mu\text{F}$, $T_a = 25^\circ\text{C}$)

2) Output Voltage vs. Input Voltage ($C_{BIAS} = 1.0 \mu F$, $C_{IN} = C_{OUT} = 2.2 \mu F$, $T_a = 25^\circ C$)

RP105x06xE/F

3) Supply Current vs. Input Voltage ($C_{BIAS} = C_{IN} = C_{OUT} = \text{none}$, $T_a = 25^\circ C$)

RP105x10xB/D

RP105x15xB/D

RP105x06xE/F

RP105x10xE/F

RP105x15xE/F

In RP105xxxxE/F, the current flows from V_{BIAS} pin to V_{IN} pin via the inside IC when the input voltage V_{IN} drops below the set output voltage V_{SET} .

4) Output Voltage vs. Temperature ($C_{BIAS} = 1.0 \mu F$, $C_{IN} = C_{OUT} = 2.2 \mu F$, $I_{OUT} = 1 \text{ mA}$, $V_{BIAS} = 3.6 \text{ V}$)

5) Supply Current vs. Temperature ($C_{BIAS} = C_{IN} = C_{OUT} = \text{none}$, $V_{BIAS} = 3.6 \text{ V}$)

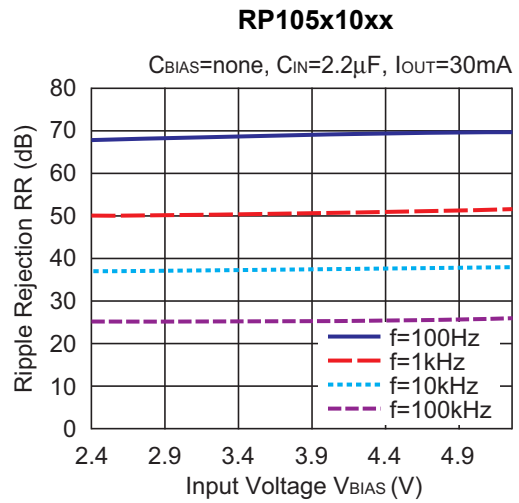

6) Dropout Voltage vs. Output Current ($C_{BIAS} = 1.0 \mu F$, $C_{IN} = C_{OUT} = 2.2 \mu F$)

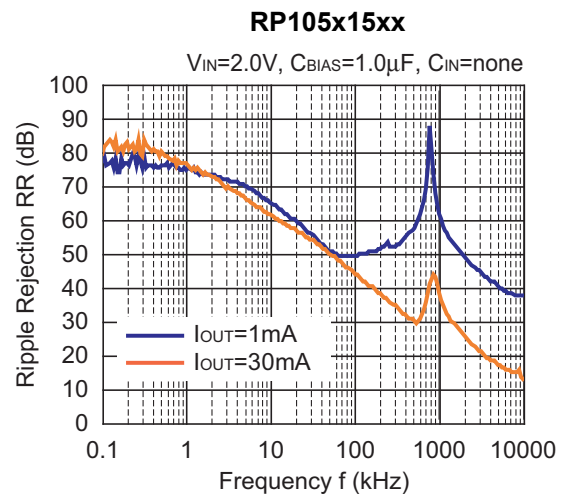

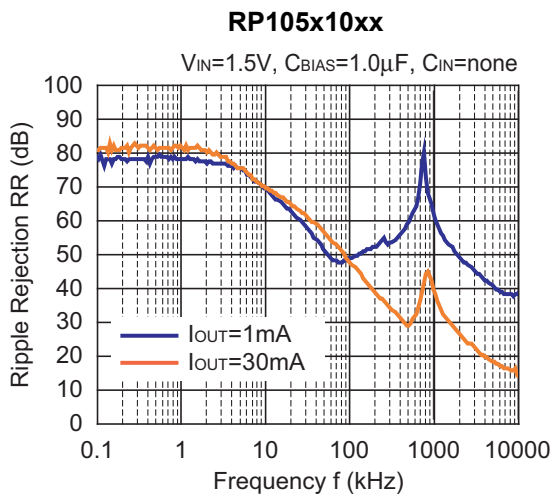

7) Ripple Rejection vs. Input Bias Voltage ($C_{OUT} = 2.2 \mu\text{F}$, Ripple = 0.2 Vp-p, $T_a = 25^\circ\text{C}$)

8) Ripple Rejection vs. Frequency ($V_{BIAS} = 3.6 \text{ V}$, $C_{OUT} = 2.2 \mu\text{F}$, $T_a = 25^\circ\text{C}$)

9) Input Transient Response ($I_{OUT} = 30\text{ mA}, C_{OUT} = 1.0\ \mu\text{F}, t_r = t_f = 5\ \mu\text{s}, T_a = 25^\circ\text{C}$)

10) Load Transient Response ($V_{BIAS} = 3.6V$, $C_{BIAS} = 1.0\mu F$, $C_{IN} = C_{OUT} = 2.2\mu F$, $t_r = t_f = 0.5\mu s$, $T_a = 25^\circ C$)

11) Turn On Speed with CE pin ($V_{BIAS} = 3.6V$, $C_{BIAS} = 1.0\mu F$, $C_{IN} = C_{OUT} = 2.2\mu F$, $T_a = 25^\circ C$)

12) Turn Off Speed with CE Pin ($V_{BIAS} = 3.6 V$, $C_{BIAS} = 1.0 \mu F$, $C_{IN} = C_{OUT} = 2.2 \mu F$, $T_a = 25^\circ C$)

13) Turn On Transient with V_{IN} pin ($V_{BIAS} = 3.6\text{ V}$, $C_{BIAS} = 1.0\ \mu\text{F}$, $C_{IN} = \text{none}$, $C_{OUT} = 2.2\ \mu\text{F}$, $T_a = 25^\circ\text{C}$)

ESR vs. Output Current

Ceramic type output capacitor is recommended for this series; however, the other output capacitors with low ESR also can be used. The relations between I_{OUT} (Output Current) and ESR of an output capacitor are shown below. The conditions when the white noise level is under $40 \mu\text{V}$ (Avg.) are marked as the hatched area in the graph.

Measurement conditions

Frequency Band : 10 Hz to 2 MHz

Temperature : -40°C to 85°C

Hatched Area : Noise level is under $40 \mu\text{V}$ (Avg.)

C_{BIAS}, C_{IN} : $1.0 \mu\text{F}$

C_{OUT} : $2.2 \mu\text{F}$

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

Measurement Conditions

Item	Measurement Conditions
Environment	Mounting on Board (Wind Velocity = 0 m/s)
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square
Through-holes	φ 0.2 mm × 14 pcs

Measurement Result

(Ta = 25°C, Tjmax = 125°C)

Item	Measurement Result
Power Dissipation	450 mW
Thermal Resistance (θ_{ja})	$\theta_{ja} = 218^{\circ}\text{C}/\text{W}$
Thermal Characterization Parameter (ψ_{jt})	$\psi_{jt} = 105^{\circ}\text{C}/\text{W}$

θ_{ja} : Junction-to-Ambient Thermal Resistance

ψ_{jt} : Junction-to-Top Thermal Characterization Parameter

Power Dissipation vs. Ambient Temperature

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
 - Aerospace Equipment
 - Equipment Used in the Deep Sea
 - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
 - Life Maintenance Medical Equipment
 - Fire Alarms / Intruder Detectors
 - Vehicle Control Equipment (automotive, airplane, railroad, ship, etc.)
 - Various Safety Devices
 - Traffic control system
 - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
8. **Quality Warranty**
 - 8-1. **Quality Warranty Period**

In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.
 - 8-2. **Quality Warranty Remedies**

When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.

Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.
 - 8-3. **Remedies after Quality Warranty Period**

With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.
9. Anti-radiation design is not implemented in the products described in this document.
10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
