NTE4903 thru NTE4999 Surge Clamping, Transient Overvoltage Suppressor Bidirectional

Description:

The NTE4900 series of silicon Transient Suppressors designed to protect voltage sensitive components from high energy voltage transients. Transient over voltage suppressor devices have become very important as a consequence of their high surge capability, extremely fast response time, and low incremental surge resistance (Rs).

Application:

The NTE4900 series has a peak pulse power rating of 1500 watts for one millisecond. Can protect integrated circuits, hybrids, CMOS, MOS, and other voltage sensitive components in a broad range of applications such as telecommunications, power supplies, computers, automotive, industrial and medical equipment.

Absolute Maximum Ratings:

Peak Pulse Power Dissipation ($T_A = +25^\circ\text{C}$) 1500W
 t_{clamping} (0 volts to B_V Min) $< 5 \times 10^{-9}$ sec
 Operating and Storage Temperature -65°C to $+175^\circ\text{C}$
 Forward Surge Rating 200 Amps, 1/20 Second at $+25^\circ\text{C}$
 Steady State Power Dissipation 5.0 W @ $T_1 = +25^\circ\text{C}$

Note 1. **NTE4908** and **NTE4909** are **discontinued** devices and **no longer available**.

Electrical Characteristics:

Clamping Factor: 1.33 @ full rated power
 1.20 @ 50% rated power

The clamping factor is defined as: The ratio of the actual V_C (Clamping Voltage) to the actual B_V (Breakdown Voltage) as measured on a specific device.
