**NTE7189, NTE7190, NTE7191, NTE7192,  
NTE7193, NTE7194 & NTE7195**  
**Integrated Circuit**  
**Pulse Width Modulator (PWM) Switch for**  
**TVs, Monitors and Audio Amplifiers**

**Description:**

The NTE7189 thru NTE7195 are off-line pulse width modulator switches in a TO220 type package bringing many new enhancements that reduce the sensitivity to board layout and line transients making design even easier. These devices incorporate all the functions necessary for a switched mode control system into a three terminal monolithic IC: power MOSFET, PWM controller, high voltage start up circuit, loop compensation and fault protection circuitry.

**Features:**

- Cost Competitive with Linears Above 5W
- Very Low AC/DC Losses – Up to 90% Efficiency
- Built-In Auto-Restart and Current Limiting
- Latching Thermal Shutdown for System Level Protection
- Implements Flyback, Forward, Boost or Buck Topology
- Works with Primary or Opto Feedback
- Stable in Discontinuous or Continuous Conduction Mode
- Source Connected Tab for Low EMI

**Absolute Maximum Ratings:** ( $T_A = +25^\circ\text{C}$ , All Voltages Referenced to Source unless otherwise specified)

Drain Voltage .....	-0.3V to +700V
Drain Current Increase ( $\Delta I_p$ ) in 100ns except during blanking time (Note 1) .....	$0.1 \times I_{LIMIT(MAX)}$
Control Voltage .....	-0.3V to +9V
Control Current .....	100mA

Note 1. Related to transformer saturation.

**Absolute Maximum Ratings (Cont'd):** ( $T_A = +25^\circ\text{C}$ , All Voltages Referenced to Source unless otherwise specified)

Power Output Level,  $P_{MAX}$

Single Voltage Input (100/115/230 VAC,  $\pm 15\%$ , Note 2, Note 3, Note 4)

NTE7189 . . . . .	12W
NTE7190 . . . . .	25W
NTE7191 . . . . .	50W
NTE7192 . . . . .	75W
NTE7193 . . . . .	100W
NTE7194 . . . . .	125W
NTE7195 . . . . .	150W

Wide Range Input (85 to 265 VAC, Note 3, Note 4)

NTE7189 . . . . .	7W
NTE7190 . . . . .	15W
NTE7191 . . . . .	30W
NTE7192 . . . . .	45W
NTE7193 . . . . .	60W
NTE7194 . . . . .	75W
NTE7195 . . . . .	90W

Operating Junction Temperature (Note 5),  $T_J$  . . . . .  $-40^\circ$  to  $+150^\circ\text{C}$

Storage Temperature Range,  $T_{STG}$  . . . . .  $-65^\circ$  to  $+150^\circ\text{C}$

Lead Temperature (During Soldering, 1/16" from case, 5sec max.),  $T_L$  . . . . .  $+260^\circ\text{C}$

Maximum Thermal Resistance, Junction-to-Ambient (Note 6),  $R_{thJA}$  . . . . .  $+70^\circ\text{C/W}$

Maximum Thermal Resistance, Junction-to-Case (Note 7),  $R_{thJC}$  . . . . .  $+2^\circ\text{C/W}$

Note 2. 110/115 VAC with doubler input.

Note 3. Assumes appropriate heat sinking to keep the maximum junction temperature below  $100^\circ\text{C}$

Note 4.  $P_{MAX}$  is the maximum practical continuous power output level for conditions shown. The continuous power capability is a given application depends on thermal environment, transformer design, efficiency required, minimum specified input voltage, input storage capacitance, etc.

Note 5. Normally limited by internal circuitry.

Note 6. Free standing with no heatsink.

Note 7. Measured at tab closest to plastic interface or Source pin.

Note 9. The breakdown voltage and leakage current measurements can be accomplished by using the following sequence:

- The curve tracer should initially be set at 0V. The base output should be adjusted through a voltage sequence of 0V, 6.5V, 4.3V, and 6.5V. The base current from the curve tracer should not exceed 100mA. This CONTROL pin sequence interrupts the Auto-Restart sequence and locks the internal MOSFET in the OFF state.
- The breakdown and leakage measurements can now be taken with the curve tracer. The maximum voltage from the curve tracer must be limited to 700V under all conditions.

Note 10. It is possible to start up and operate at DRAIN voltages well below 36V. However, the CONTROL pin charging current is reduced, which affects start-up time, auto-restart frequency, and auto-restart duty cycle.
