- Note 1. All voltage values, except differential voltages, are with respect to the midpoint between V_{CC+} and V_{CC-} .
- Note 2. Differential voltages are at the non-inverting input pin with respect to the inverting input pin.
- Note 3. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15V, whichever is less.
- Note 4. The output may be shorted to GND or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.
