available in a lead-free package

The OV10633 raises the bar in security imaging with a single-chip SOC sensor that combines 720p high-definition (HD) video with WDR in a 1/3-inch optical format. By integrating a full image processing pipeline on-chip, the OV10633 accelerates time-to-market and reduces systems' bill of materials, making it an ideal solution for mainstream surveillance applications such as IP cameras and HDcctv systems.

Implementing OmniVision's proprietary processing technology, the OV10633 delivers 115 dB dynamic range to offer clear, fully processed YUV color WDR video output. The sensor is built on a 4.2 micron OmniPixel3-HS™ pixel enabling 720p HD at unparalleled low-light sensitivity to capture detail-rich, color video in any environment, including low-light scenes or high-contrast lighting conditions.

The 1280 x 720 pixel array provides 720p HD video at 30 frames per second. It supports a digital video parallel port, and provides full-framed or windowed 10-bit or 8-bit YUV and 18-bit RAW RGB output format with complete user control over formatting and output data transfer.

The sensor offers all required automatic image control functions, including automatic exposure control, automatic white balance, automatic black level calibration, as well as defective pixel correction, gamma correction and lens shading correction. Camera functions are programmable through the serial camera control bus (SCCB) interface. Additional features include a horizontal and vertical windowing capability, external frame sync capability, 50/60 Hz flicker cancellation and low power consumption.
