## Ultra Subminiature Basic Switch with plenty of terminal variations

- Incorporating a snapping mechanism made with two highly precise split springs that ensures long durability.
- Using insertion molded terminals that prevents flux penetration.
- In addition to self-clinching PCB, left-angled, right-angled terminals,
2 types of soldering terminals are available.

- Lineup of 5A type for high load applications.

## RoHS Compliant

## Model Number Legend

## List of Models

| Actuator | Maximum Operating Force (OF) * Terminals | 3 A | 1 A | 0.1 A |  | 5 A |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | General Purpose $1.47 \mathrm{~N}\{150 \mathrm{gf}\}$ | Low Operating Force $0.74 \mathrm{~N}\{75 \mathrm{gf}\}$ | General Purpose $1.47 \mathrm{~N}\{150 \mathrm{gf}\}$ | Low Operating Force $0.74 \mathrm{~N}\{75 \mathrm{gf}\}$ | General Purpose $1.47 \mathrm{~N}\{150 \mathrm{gf}\}$ |
| Pin plunger | PCB terminals (Standard) | D2F | D2F-F | D2F-01 | D2F-01F | D2F-5 |
|  | Self-clinching PCB terminals | D2F-T | D2F-F-T | D2F-01-T | D2F-01F-T | - |
|  | PCB terminals (Right-angled) | D2F-A | D2F-F-A | D2F-01-A | D2F-01F-A |  |
|  | PCB terminals (Left-angled) | D2F-A1 | D2F-F-A1 | D2F-01-A1 | D2F-01F-A1 |  |
|  | Solder terminals | D2F-D3 | D2F-F-D3 | D2F-01-D3 | D2F-01F-D3 |  |

Note 2. The operating characteristics are for operation in the A direction ( $\downarrow$ ).

## Precautions

„Please refer to "Basic Switches Common Precautions" for correct use.
Cautions

## -Soldering

- Terminal connection

When soldering, make sure that the temperature of the soldering iron tip is not higher than $300^{\circ} \mathrm{C}$, and complete the soldering within 3 seconds. Do not apply any external force for 1 minute after soldering. Soldering at an excessively high temperature or soldering for more than 3 seconds may deteriorate the characteristics of the Switch.

- Connecting to PCB terminal Boards

When using automatic soldering baths, we recommend soldering at $260^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ within 5 seconds. Make sure that the liquid surface of the solder does not flow over the edge of the board.
When soldering terminals manually, perform soldering within 3 seconds at iron tip temperature not higher than $350^{\circ} \mathrm{C}$. Do not apply any external force for at least 1 minute after soldering.
When applying solder, keep the solder away from the case of the Switch and do not allow solder or flux to flow into the case.

| Correct Use |
| :--- |
| OMounting |

Use M2 mounting screws with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.08 to $0.1 \mathrm{~N} \cdot \mathrm{~m}\{0.8$ to $1 \mathrm{kgf} \cdot \mathrm{cm}\}$.

## -Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The minimum applicable load is the N -level reference value. This value indicates the malfunction reference level for the reliability level of $60 \%\left(\lambda_{60}\right)$.
(JIS C5003)
The equation, $\lambda_{60}=0.5 \times 10^{-6} /$ operation, indicates that the estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of 60\%.
