

World's Smallest Class 6-Contact Guard Lock Safety-Door Switch

Guard Lock Safety-door Switch D4SL-N

- Wiring time is reduced with two types of wiring methods capable of one-touch attachment and removal.
- A wide variety of built-in switches can be used for various devices.
(4-, 5-, and 6-contact models are available)
- Key holding force of 1,300 N.
- It is possible to change the key insertion point without detaching the head.
- Drive solenoids directly from the Controller.

Slide Key D4SL-NSK10-LK□

- Lockout Key to prevent workers from becoming trapped inside the hazardous area.
- The vertical D4SL Guard Lock Safety-door Switch can be easily mounted on 40 x 40 mm aluminum frames.
- The plastic material makes the Slide Key suitable for lightweight doors.

- Notes: 1. The above values are initial values.
 2. The Switch contacts can be used with either standard loads or microloads. Once the contacts have been used to switch a load, however, they cannot be used to switch smaller loads. The contact surfaces will become rough once they have been used and contact reliability for smaller loads may be reduced.
 *1 The degree of protection is tested using the method specified by the standard (EN60947-5-1). Confirm that sealing properties are sufficient for the operating conditions and environment beforehand. Although the switch box is protected from dust, oil or water penetration, do not use the D4SL in places where cutting chips, oil, water or chemicals may enter through the key hole on the head, otherwise Switch damage or malfunctioning may occur.
 *2 The durability is for an ambient temperature of 5 to 35°C and an ambient humidity of 40% to 70%. For more details, consult your OMRON representative.
 *3 Do not pass the 1 A, 125 VAC load through more than 3 circuits.
 *4 These figures are minimum requirements for safe operation.
 *5 This figure is based on the GS-ET-19 evaluation method.
 *6 This value will vary with the switching frequency, environment, and reliability level. Confirm that correct operation is possible with the actual load beforehand.

Door Switch Features

The **lockout key** prevents workers from becoming trapped without using a padlock.

Note: Using LEDs of D4SL-N enables confirming whether the door is open or closed and locked or unlocked.

The handle-shaped fixture makes it easy to use the Door Switch.

Close door

Locked (power not supplied to solenoid) The slide handle is closed.

Close door

Unlocked (power supplied to solenoid) The slide handle is closed.

The slide handle can be pulled.

Open door

The slide handle is open.

When the slide handle is open, the lockout key can be pulled regardless of whether power is being supplied to the solenoid or not.

Open door

The slide handle is open.

The slide handle is secured at the position shown in the figure. A worker holding the lockout key will not be trapped locked inside the hazardous area by another person.

Open door

The slide handle is open.

If the lockout key is not mounted, the slide handle will not move and the door will not close.

CAUTION
 Lockout key ① Guard Lock Safety-door Switch will not be released with Lockout Key.
 ② Lockout Key may be damaged if the sliding contact may when the door is closed.
 ③ Always carry lockout key when entering the Hazardous area.

Attach the supplied caution labels for display.

Lockout Key

Do not turn the key as in the figure above if the slide handle is closed.

Circuit Connection Example

- Direct opening contacts used as safety-circuit input are indicated with the mark.
- Do not switch circuits for three or more standard loads at the same time. Doing so may adversely affect insulation performance.
- DC solenoids have polarity. (E1: Positive, E2: Negative)
- Confirm terminal polarity before wiring.
- If a lock is required for safety, design the system so that the closing of the NC contacts on both the door open/closed detection switch and the lock monitor switch is detected.

Connection Example for D4SL-N□AF□-□

Contacts 12 and 41 are internally connected.

Connection Example for D4SL-N□EF□-D□

Contacts 12 and 41 are internally connected.

Connection Example for D4SL-N□SF□-□

There is no internal connection, so connect contacts 22 and 42 externally.

Connection Example for D4SL-N□NF□-D□

Contacts 12 and 41 and contacts 22 and 51 are internally connected.
